This is good news, and no, I didn't know this either. It is much like the
idea that Tempest 2K for the Jaguar has built in commands for accepting a
rotary controller though the Jaguar initially did not have one. :)

The Self test shows both ROMS as good.
It looks like it's time to pull the ram chips and install some
sockets.
Any idea where to find 64Kx1 chips that will work?

Source record: 41538

FamilyNet HQ: Telnet:\\www.family-bbs.net

Hey folks,

I am a dealer of used Atari 2600 and 8bit games/software. I am looking for folks who would like to get rid of a few extra cartridges and make a little extra cash in the process.

You see, as a dealer, I can buy your extra carts at a resonable price (even the common ones will garner 75 cents to $2; 8bits will go from $1-$5, rarer titles can go even higher), do some routine maintnence on them (for one, make sure they will work!) and either keep them myself or resell in prisitine condition. I can even do a 50% consignment on your games(this is often reccomended for those rare and unusual ones) so that you can recieve payment over time!

If you would like to find out how much your spare games would garner if you were to sell to me, please reply to this message by e-mail. Please include the games you would like to sell and the quantity and condition of each (even some games that have seen better days will qualify for our minimum rates, or higher!).

Remember, it is better to part with those old dust catchers than to let them collect dust! There is always someone who wants it more than you do.

OK, 19 out of 20 times, it is your 12 VDC power supply.

What Atari did was use a standard Atari 9VAC power brick to power them. But 9 VAC rectifies to 12.6 - diode forward drop - regulator forward drop or not enough.

So... they put in a voltage doubler circuit in there. Thing is, it runs so hot it the diodes break contact and you lose everything to do with the 12 VDC.

>(But now who's being picky? :) (Oh, and it was Star Raiders 2!)

Well, okay, but the image is still mapped on *something* rather than
just manipulated in two dimensions.

While we're picking nits, it was called Star Raiders 2 only after
Atari failed to get the rights to use The Last Starfighter's name - or
something like that, anyway. :-)

Even whit bad ram wouldn't it still boot to basic?

The little boxes only designate ram in 1K increments, not
bits(sigh). Still have to test each ram chip.

If a bit in a ramchip in the lowest 1K or so, tested bad, then
the computer will jump to test, these areas are vital to O.S.
operation(pointers, the stack, etc.)

John Tibbets has a problem formattin disks on a 1050:
"It gives you the flash" You are actually using a DOS to format
the disks, right?

Cleaning the head with a damp drive cleaner works well, or a
cotton swap, but don't get the pressure pad above it wet.

With the case open, its possible to reseat the chips, and make
sure the disk and hub actually spin, and head moves.

Hello Ron H, hows it going, keep those Atari's humming brightly & keep
the ATARI faith

Anyway re:ataridisk and happy/indus gt

What particular internet site has the ataridisk program and instructions,
so I can use it

Also, As I said in my first reply, I don't have either an xformer/siopc
or ape/pro interface
So at the moment my lazer1050 and my indus gt are redundant on my pc
(unless u know something or someone in GB
(near London) that has these interfaces and is willing to sell)
Otherwise I can only resort to utilising the inbuilt 5.235 d/d in my pc
(AMD duron600), which is why I'm trying to get my
head round anadisk and deanna pc proggies

Keeping the Atari happy

Hey, dream on, the only thing I am going to sell anytime soon is Music Composer, out of my collection anyway. I price my items on a cart to cart basis. Pac-Man and BASIC will go about $1-$1.25 each (trust me, I have sold these for $5 before...yes, Pac-Man...) Star Raiders will bring about $3, Missle Command $2, etc, etc. I know that everyone could post thier own but I was thinking those who just want to get rid of them NOW.

Why not use 256Kx1 and get yourself a decent amount of RAM? The upgrade's
not that hard and having that extra 192K is really useful.

6325. Atari 8bit Chat Tonight Preempted by US Presidential Debate

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-03 00:00:00 UTC
From: DCM01@USA.NET
Message-ID: <39d9e6f1.8622328@news.CIS.DFN.DE>
Source record: 41401

The weekly chat session will be resumed next week.

In our seven week history on amiganet #atari8 has had some good chats and been visited by Atari luminaries such as the author of Ice-T, and the author of Diskformer. So the tradition will definitely continue.

Speaking of political races, anyone interested should try the Atari 8bit program "Dark Horse" where you strategically roleplay a presidential candidate.

The diodes are labeled CR15 and CR16, they are really hidden in the back of
the board between 3 big caps, kind of hard to get to.
>
> heh, I guess the caps aren't a good
> direction since, while observing the PCB,
> a cap FELL OFF in my hand. *LOL* =D

They get hot to. I have had them puff up and leak all over the PC board too.
That is another thing to look at of course.
>
> Must be defective solder. :)

They get that hot! Atari knew about the problem, but all they did was leave
the diode leads REALLY long on later boards so the diodes were mounted ~1"
off the surface of the board. In my experience it didn't stop the problem as
I have found faults in boards that were made like this too.
>

Bad design going in, I don't think it can be easily saved. Easy is relative of course, some people would consider hard wiring a IBM type power supply to a 1050 an easy solution. Just puddle gobs of solder on the existing ones and get it nice and hot.

>
> Also, while I'm asking, the jumper

That is fine, those resistors are really just jumpers to select the type of ROM used in the drive. IIRC, Atari used both 2532 and 2732 type ROM/EPROMs in the drive. The two types of ROM have different pin outs which requires you to change the jumpers if you upgrade with a USDoubler and started off with the wrong type.

>
> And, at this point, could there be
> irreparable damage done to the drive?

Almost no such thing.<grin> But at some time it may not be worth the trouble if you can find another drive. I typically find 1050s for ~$5 and to even replace the 2793 controller in the thing it costs $10 for the part.

6328. Re: Track Ball Mode For A8 Sofware

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-03 00:00:00 UTC
From: Russg <russg@en.com>
Message-ID: <39da1230$0$99051$53a6d3de@news.erinet.com>
Source record: 41404

As so often happens, I read something on CSA8 and I try whatever
is being talked about.
I had a trak-ball, never used it tho.
I tried Missle Command and it worked with the JS switch.
Hit <cntrl>T and it worked in TB setting.
Seems that the trak-ball mode is tougher, I guess to compensate for
the easier control.
TB setting in joystick mode and the cross-hairs wander all over the
place. JS setting in trak-ball mode and it also doesn't work right.
Anyone know how to fix a trak-ball?
I had to open the trak-ball up and fiddle with the little device that
has a gap and the wheel goes in it.
It is either a loose wire or something, I just move the little box
a little and it starts working. One direction works (left-right), the
other direction I have to fiddle and fiddle to get work (up-down).

Rick Cortese fell silent.

Could you find ME one for that price?
Seriously.

Now, don't laugh....

I bought this thing for over $120.00 and ... HEY!
I told you not to laugh! At any rate it doesn't
look like I could even advance to LOSER status on
this thing. This is like having a nightmare your
condemned to "The Hell of Eternal Boredom" in which
your first year geology teacher is dispassionately
droning on about the "remarkable striations" of
gneiss. Only to jolt awake to find yourself in line
at the DMV. It Just Keeps Getting WORSE!!

I guess I could try to make some money back by
selling tickets to it as:

"The Ravenous 1050 - Eats up Time, Disks, and Money"

I could put it in my "Kludge Oddity Freak Show" in between "The Eternally
Inexpensive RS/600 (The NEXT part will be cheaper)" and "The Militantly Tardy
Microsoft Collection (Always three upgrades away
from where I want to be)". Teeming crowds will pay
top dollar to see such freaks as "The Stuttering
Hand Scanner" (oow!), "The Hiccuping Daisy Wheel
Printer" (aah!), and "Tipper Gore" (eep!). I could
travel North America in my "Yugo" showing these
wares on a tour sponsored by "Firestone (reinventing
the wheel - one last time)".

I'm gonna go beat the tar out of myself now.

I think I have a couple of them laying around, shipping will be another can of worms from a cost standpoint I think.

I already bought a blister pack and will mail you a SIO2PC cable when I hit a post office. There is really nothing like a real 1050, but a lot of people have a tendancy to dedicate older PCs to the drive functions once they try the cable. I have an old Tandy 1000 with a 20<30?> meg HD in it and it works so well I don't really use my ATR or real drives much anymore.
>
> Now, don't laugh....
>
> I bought this thing for over $120.00 and ... HEY!
> I told you not to laugh! At any rate it doesn't

Ouch! About as funny as a broken leg!

Let's see how you do with the SIO2PC. It is only ~$2 for me to mail the cable to you, so I don't need any money for it. Most of the stuff you need to run can be found on the net at various archive sites.

If you want a real 1050, I think they are ~$13 or so to ship.

If you do like the SIO2PC software, just mail Nick Kennedy a couple of bucks for share ware fees or maybe get a copy of and register APE. I think that will make the most people happy.

6331. Quirky Memory on 130XE?

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-03 00:00:00 UTC
From: drteele <drteele@bellsouth.net>
Message-ID: <39DA5158.D5114B47@bellsouth.net>
Source record: 41407

I have a 130XE that works just fine, as long as you don't access the expanded memory. I have tried running the self test, and it just locks up at the expanded memory test. I am somewhat handy electrically, being an EE, I just need a nudge in the direction of where to look on the board for bad traces, loose chips, etc. which would affect this feature of my Beloved Atari.

Any tips will be greatly appreciated.

P.S. - If a fix is successful, I will move on to one or all of the following:
::: Improved video output circuit;
::: memory expansion using the addition joystik bits;
::: installing an internal SIO2PC serial port.

Wish me luck!

Dan

try XL-Search:
http://www.newbreedsoftware.com/xlsearch/xlsearch.cgi

Both versions are here; the correct Ataridsk zip contains the required
Ataridsk.men and a Read.me file. It is confusing because two different
utilities share the same title. Capture them all and discard the ones which
explain command line options when executed. The one you want runs from DOS and
provides a menu using the arrows, Return, & escape keys; part of the prompts
are in what looks like German.

>>
>> Title Keystroke Required
>> -------------- --------------------
>> Missile Command CTRL-T
> Slime from Synapse has the same feature, CTRL-T.

Well I tried this with an ST mouse, and it was all point and click!

It got to be an enjoyable game as the cursor was very responsive, but as
the game progressed and I needed to move the mouse in a small space rapidly it
got a bit difficult. Haven't tried it with the best electronics trackball
just yet because I wasn't up to disconnecting it from my ST setup.

All and all, fun. Of course, hitting CNTL-T looked like it had the same
effect as a system reset (seems it sets up the communication with the port to
set up the controller towards the beginning of the startup) so trying to hit
CNTL-T during a active game will restart the cartridge.

Anyway, thanks for pointing this out to me! That and Slime (Chris Martin,
another 8-bit and ST enthusiast like myself, will be amused by this fact).

Source record: 41543

Hi Rick,

First let me say Thank You for your help,
I appreciate it very much. I hope this
narrows down the problem. (You'll see what
I mean.)

Rick Cortese doodled:

> BACK
> ********
> * x *
> * *
> * *
> * *
> ********
> X marks the spot where the diodes are,
> huddled inbetween a couple of big caps.

Rick Cortese pondered finger painting....

I guess I'm a tad confused by the diagram.
Are the diodes near Chip U4 or Chip U1?

heh, I guess the caps aren't a good
direction since, while observing the PCB,
a cap FELL OFF in my hand. *LOL* =D

Must be defective solder. :)

It looks like someone has gone through this
before, since some of the diodes throughout
are the newer Radio Shack type. *Assuming*
this is a reoccurring problem with the
drive, do you have any suggestions on how
to prevent it?

Also, while I'm asking, the jumper
resistors on J1-J7 appear to be just
Hook-up Wire cut and soldered - is this
alright? or are there specific resistors I
should replace them with?

And, at this point, could there be
irreparable damage done to the drive?

Any insight would be wonderful.

TIA

(Greg says trak-ball does a loop in JS mode, or something.)
I don't know. I am using Missle Command as a test program for
the trak-ball. I'm assuming my trak-ball is at fault for not moving
the cross-hairs right, not Missle Command.
I have the thing taken apart and keep fiddling with it.
Right now, the cursor moves down and right only, regardless of
which way I turn the wheels. It has like 4 or 5 chips in it. I'm
suspecting
a chip. But I don't want to go messing with replacing chips, and don't
know which it might be.

Disregard everything I say because it has been so long since I have read a 'driving controller' spec I am sure this is specifically inaccurate while only having some info of generic use.

That being said, the direction and speed are all encoded into a single bit or two for X and ditto for Y.

I can't recall the exact encoding scheme, but it goes something like a sample is read from the JS port and speed is determined by frequency. i.e 1001001 is slower then 10101.

But I think they also use multiple detectors. That is, they use a set of 2 leds and 2 photo transistors for each direction. They put these just slightly out of sync for lack of a better description, to determine direction.

Lets say you have driving controller, they just look like a pot/paddle controller except you can rotate them w/o hitting a stop.

Now using two data bits 1 and 2 you would get something like 00120012 for one direction of rotation and 00210021 for another. Once again, this uses the the time when the port is 00 to determine the rotational speed.

But for this scheme to work you have to have the two detectors exactly phased with each other. If they aren't out of phase, you get a mishmash of 00210012. If they are too close in phase, you get 002002. If they are two far out of phase you get 01020102.

If one of the detectors or LEDs gets dirty, fails, or doesn't phase right, y ou are SOL.

Hello Mathy, hows the atari thing going, keep the atari faith and keep
those atari's humming brightly

Anyway re: your last posting what other ideas did derek ferm c/o
microdiscount steal, If your'e on about the floppy board, that's old hat
and not even a css product as ferny had claimed, as the actual board was
actually the xf551's innards (bought from atari) which is why ferny
didn't attempt to advertise this product, for he might have had atari's
solicitors on his case (solicitors is the UK equiv. of what u dutch call
avocaats and what the US call lawyers/attorneys).. So the question
remains... what else did derek fern steal?

PS aren't you related to the psv eindhoven player that manchester
united tried to sign up

Keeping the Atari happy

For what it's worth, I have found that a Trak ball works fine with missile command as is. A mouse needs the CTRL T command to work. If you use CTRL T with the trakball, it does not respond correctly - no proper up and down motion.

It isn't that bad. About once a year I make up maybe 3-4 cables for people.

Usually webmaster sells his on eBay, I think he sells them for $10-$25 , and that price includes shipping from Poland, so there isn't a huge pent up demand. He also has a better reputation then me for getting things out fast.<grin>

But same deal as Jon, just send Nick Kennedy a couple of bucks shareware fees and we'll call it even.

Send me your mail address via email and give me a few days to get off my butt.

I should quote, but don't.
Harvey says Missle Command, in the trak-ball mode, doesn't work,
if I understood him.
I don't think that's correct. I mean why would MisCmd have a
trak-ball mode (by hitting <cntrl>T) if it didn't work in the trak-ball
mode?
The second thing is, briefly, by moving the detectors, I had marvelous
control in the trak-ball mode on both MsCmd and the trak-ball.
It was really fun to play in that mode(s), but I'm positive the missles
moved faster and the trak-ball mode was harder.
Rick says the trak-ball has photo/led detectors. I tried to look in the
gap of the little black detector and I couldn't see any clear or other than
straight black plastic in the slot. This made me believe it worked on
magnets.
Initially, when I first tried the trak-ball, (a cx80, there's also a cx22),
the left and right wheel worked perfectly, and the up and down wouldn't
work at all. I fiddled (moved) the up/down detector and it worked in
trak-ball mode. But every time I put it back together, it would quit
working. At this point, after having moved both the detectors, now
both wheels move the MSLCMD crosshairs only one direction, all
I can do is move down and right, regardless of which way I turn the
wheels.

Oh, one more thing.
Sorta to Harvey, I greatly appreciate your input.
BUT, if you can't get your trak-ball to work in trak-ball mode in mslcmd, then you haven't lived, so to speak. Yes, it works in joystick mode, but not like it works with both software and trak-ball in TB mode.
Regards,
Russg

I think Stokely Carmical<sp?> said something to the effect that people used
call him paranoid because he "thought there was an FBI agent under his bed".
After he got his FBI files through the Freedom of Information Act he
commented "There may not have been an agent under my bed, but they sure as
hell had a microphone there".

Anyway, watching ZDTV one of the announcers said he is running a firewall
that logs illegal attempts to get into his system. IIRC, he says he averages
about 10 breakin attempts a day.

There was also a good article on slashdot where someone set up a phoney box
with a known security hole. He then proceeded to record the IRC chat between
the clowns/script kiddies that broke in. The IRC chat sessions made me think
they are providing farm animals with computers somewhere. The people doing
the breakins are not exactly the brightest bulbs in the box.

At this point it might be useful to ask Microsoft why they persist in
not implementing proper logging facilities, given all the millions of
Win9x boxes with permanent internet connections.

> Since he's on a cable modem through a network card I suspected the
> things were coming in off the internet. Apparently they were because
> they stopped appearing as soon as I went into the properties for
> his hard drives and disabled File Sharing.

Its fairly common for people to leave file sharing on, leading to the
horrible spectacle of an entire neighborhood of cable-modem people
able to see each other's shares. Disabling file sharing is routine
(if often not followed) advice for those who must use Windows.

> These virus scripts are only dangerous if they run and, to ensure
> that, they locate themselves in the Startup folder usually with
> Hidden, System and Read Only attributes so make sure your file
> view options show all files.

But, your friend may also have a variety of trojan horses installed in
the Windows executables. If his/her hard disk was exposed to the
internet, you cannot assume this stuff only happened in the startup
folder unless you have hashes of the original binaries to compare with
what is produced now. Even then you couldn't guarantee the entire
hash system has been subverted to disguise the breakin. It sounds
implausible, but you can download software kits to do the breakin and
disguise it all automatically.

Script virii are small change- whats really fun are trojans that sleep
for some period, or only wake up to propogate, until they do their
thing sometime later. There are certainly quite a few undetected ones
out there and virus technology is getting more sophistocated by the
day.

You might suggest your friend get a proper firewall and do a full
fdisk reinstall.

Gregm

I believe Eudora suffers from a "similar but different" feature.
Also, any auto-display feature within Microsoft will be vulnerable to
some extent, depending on the code introduced.

Just my 2 cents worth...

I suggest deleteing the "WINDOWS" directory. It eliminates quite a few
problem immediately. =D

> Since he's on a cable modem through a network card I suspected the

Yes, this "trick" has been actually documented since Win '95 A. Its
nature is inherent with MS and is actually the backbone of their
networking. As a rule never "share" anything.

> These virus scripts are only dangerous if they run and, to ensure
> that, they locate themselves in the Startup folder usually with

Might I suggest a "tool" the wife uses. It's called "Black Ice" and it
can be purchased over the 'Net for $40.00. It's VERY efficient.
Nothing is ever bullet-proof, but it locks down access ports, and even
cancels Trojan responses.

Just passing on through...

True. The real players are those that write the scripts for the kiddies. However, regardless of motivation for writing, all are known and documented exploits that can be prevented even before the scripts are built.

" ... As with all security issues, Microsoft is evaluating the threat, proactively communicating with customers, and working with third-party anti-virus and intruder-detection vendors to mitigate any serious effects...."

(http://www.microsoft.com/PressPass/features/1999/07-08orifice.asp)

This was an article released by Microsoft on July 8, 1999 concerning Back Orifice 2000. Since preschoolers are now using this trojan, and there are still break-ins because of it, IMNSHO the scrutiny must lie in what is meant by "evaluating the threat" and in the mitigation of "any serious effects".

The exploit still exists, since the trojan (as most do) opens selective channels within the OS's architecture to create a client/server connection. What's appalling is the simplicity to subvert the integrity of MS with this trojan (just as an example).

> Script virii are small change- whats really fun are trojans that sleep
> for some period, or only wake up to propogate, until they do their

Someone found over 30 full access, wide-open exploits not relayed to the bureaucratic elitists (BUGTRAQ?), and the truly interesting part, is that if a schlub can find them, think how many more there are that anyone with greater experience can dig up.

I long for the old days of polymorphic code, as opposed to mere exploits labeled as virus. In those times, it was easy to kill the virus. You kill it, it dies, its over. Now, with the exploits nested into the infrastructure throughout the operating system, it turns into a daily battle of maintaining the integrity of an eroding OS.

Or so I read in a fortune cookie once...

>Also, any auto-display feature within Microsoft will be vulnerable to
>some extent, depending on the code introduced.

I think you're right about that, though I don't know explicitly what
its vulnerabilities are offhand. I'ven ever actually used Eudora to
any great degree, and know no one who does.

>view options show all files.

These are usually the result of trojan attacks, which can exploit the
File and Print Sharing features of Windows. There are two options for
preventing this vulnerability:

1) Disable file and print sharing. This will prevent outside sources
from gaining access to any networked drives on your system. The
downside is that you will not be able to use your computer on a LAN,
and your system will not be hidden from hackers using port scanners,
leaving you vulnerable still to hack attempts.

2) Use a trojan scanner. I suggest ZoneAlarm. It is a realtime
trojan scanner that is frequently updated and very well-supported. It
will hide your ports from potential hackers, essentially making you
invisible to hackers. Best of all, it's free for the personal
edition. You can get it at www.zonelabs.com.
NOTE: Do *NOT* use LockDown 2000 as your trojan scanner. It is
extremely unreliable and has a very alarming tendancy to FREQUENTLY
misreport hack attempts that are in fact simple pings or random
network activity. Even worse, it may not detect and remove trojans
from your system. This is especially troublesome for very nasty
trojans such as SubSeven, BackOrifice, or to a lesser degree the aged
Netbus.

Yep, Black Ice is good. I run ZoneAlarm on one PC and the Norton firewall
on the other. AND, I keep file and print sharing turned off unless I really
need them, and then I only have them on as long as I need them.

I think I have parts for the two I commited to right now<Mike and Jon>. If
you can wait a week or two to get it, send me you mailing address. I
actually have a MAX232 chip laying around, but I'm a bit lazy about putting
that version together so you have to wait for me to buy a couple of 1489s. I
am also dead nuts out of 9 pin connectors. For some reason, the last 4-5
times I have gone by JDR they have been sold out. I haven't had a bad
experience with Radio Shack in 7 years now, but I still hold a grudge.<grin>

6379. 800xl help revisited

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-05 00:00:00 UTC
From: compkid <collier.steven@acd.net>
Message-ID: <cUndOTqGs4cbTY=yJDa1q3d1d9pV@4ax.com>
Source record: 41361

Patient still nonfunctional stats as follows:

Self test shows ROMS ok
shows some red memory locations, whats strange is here is only 40
blocks not 48 as seen in emulators?

Condition is the same with or without the keyboard.

I've installed sockets for the memory chips and swapped the chips out,
no change.

The 1 socketed chip in the middle of the board 74LS375 is it of the
memory addressing?

Any idea's out there? or is it a parts machine?

Steve

Hold down the Option key during boot to disable built in BASIC.

They do some odd stuff with memory, delay line and what not. But the DRAM
data bits are attached directly to the buss. The DRAM has multiplexed
address pins, they are fed by the 2 74LS158s and the delay circuitry. Still
sounds like a bad DRAM to me, but I think the other parts do go out. Let us
know if you find the problem.

Try holding Option when you boot to disable the BASIC ROM. That should
make all 48 RAM blocks appear.

> I've installed sockets for the memory chips and swapped the chips out,
> no change.

Trouble with swapping chips is the replacements are almost always
used and might themselves be faulty.

6382. Update to the translation project

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-05 00:00:00 UTC
From: pap3@dana.ucc.nau.edu
Message-ID: <8rh3ef$2f3$10@usenet.nau.edu>
Source record: 41437

Hello,

Just a brief update on the Westfront PC translation project to the following systems:

o - Macintosh (68k)
o - Unix/Linux
o - Apple II/IIe
o - TRS-80
o - Tandy 1000
o - Sinclair ZX Spectrum
o - Atari 400/800
o - TI 99/4A
o - Coleco ADAM
o - DEC Rainbow
o - Amstrad

There are others planned; CP/M, in particular, would be a fine choice. For more information on planned releases, go here:

http://www.geocities.com/dunric/westfront.html

The source for translation is here:

http://www.geocities.com/dunric/wftrans.zip

From an older version, 7.00 dated November 4, 1999.

(You may need to copy and paste URLs into URL location bar of browser, as Geocities is picky about offsite download links)

I've been doing some research during the brief moments of free time I have on weekends, and have noticed a few things:

o - Most BASICs before 1978 had only minimal commands
o - Many BASICs were 8K (standard)
o - Most flavors of BASIC had A0-Z9 variables
o - Some didn't have string variables
0 - Most had access to RIGHT$,LEFT$,MID$ and STR$
o - Some used MATEAD Var%(x,y) for subscripted variables
o - Many machine specific statements such as COLOR, CLS and LOCATE did not appear until 1982 (IBM BASIC)

I also noticed some odd structure usages on some machines:

(Honeywell 600/6000)

```
940 LET X=L\LET Y=M\GOSUB 830
```

"\" is used in place of the now common ":" separator. Easy enough
to translate.

LET appears to be optional on later versions of BASIC (1978 onward).

I am also aware that file handling is machine specific, i.e.:

```
OPEN f$ FOR OUT AS 1
PRINT #1
CLOSE 1
```

Is an example of an older BASIC that printed output to a printer
or screen (but could also direct output, via special programming,
to a cassette player for tapes or a disk drive)

I looked at APPLE BASIC and noticed this weird usage:

```
D$=CHR$(4)
OPEN D$"DATA.DAT SREADFILE"
OPEN D$"DATA.DAT SWRITEFILE"
CLOSE D$"DATA.DAT"
```

Something like that, anyway (this is all from memory)

A final note is that some (most?) older BASICs before
Extended BASIC was introduced lacked IF/THEN/ELSE, DO/LOOP
and CASE statements.

So...

I am going to be making some assumptions about the BASIC
used, the speed, the monitor/television screen capabilities
and required STATEMEMTS:

Required:

```
DIM (must support integer _AND_ string variables!)
LET (optional)
REM
FOR/NEXT
TO
READ (MATREAD can be substituted if necessary)
DATA
PRINT (Obviously...)
INPUT (Obviously...)
IF
THEN
GOTO (or GO TO)
GOSUB (or GO SUB)
LEN
VAL
TAB
```

INT
RND
RESTORE
RANDOMIZE
ON (GOTO, GOSUB)
ABS
MID$
LEFT$
RIGHT$
STR$
CHR$

Not required, but helps

LOCATE (or clone)
CLS (or clone)
COLOR (* - Westfront PC was written in COLOR to differentiate it from other
text adventures that use only one color...Read: Boring!...If your
system does not support a feature of or equivalent, then we have
a problem...IF your system doesn't support color, then PLEASE
say it at least supports HIGHLIGHTING, UNDERLINING or BOLD...this
would be a decent alternative to non-COLOR supported systems)

(** - And 8 or 16 colors would be nice, too!)

If I've missed any, then please let me know at: dunric@yahoo.com

Memory Requirements

I'm going to try to squeeze as much as possible from WFPC into an 8K BASIC...
Yes, it's going to be hell trying to squeeze the first continent (1,014 rooms) of WFPC
(Overall: 1,572 rooms) into 8K, but there are ways around the variable usage (i.e. reading
in rooms from disk, tape, etc)

There are tons of empty rooms...they don't need to be included. The Frequently Asked
Questions
(F.A.Q.) anad Maps for Westfront PC are located here:

http://www.geocities.com/dunric/faqmap.zip

Just copy and paste into URL bar of browser.

So PLEASE have your system at least handle:
---

o - 500-1200 total lines of BASIC code (minimum)
o - IF/THEN/ELSE statements (so I can squeeze as much as possible into 8K)
o - Integer and string variables
o - Tape/Disk file commands, i.e. OPEN/CLOSE,PRINT#,INPUT#, etc.
o - 360KB of Disk space (You could use two disks if necessary)
o - At least 40 columns of text per line (It uses, or will use, line wrapping)

If you'll notice from this picture:

http://www.geocities.com/dunric/tavern.jpg

Color is VERY important to gameplay (room specific commands are highlighted in gray, directions
and other things in yellow, and rooms in white. I also like to use green and purple a lot (for
the inventory and other things).

Necessary commands:

Westfront PC is a text adventure.

Certain commands are necessary, some aren't:

I can make concessions on certain commands, i.e. when a player GETs an object, if it can be worn or wielded,
then the computer will automatically equip it for the player, without having to use WIELD, WEAR
or REMOVE commands. Same with DROP.

BUY and SELL are absolutely necessary. The player needs a way to purchase and sell items.
FIGHT (or an equivalent) is absolutely necessary. The player needs to gain experience points,
find new weapons and armor, and pass certain trials in the game.

OPEN and UNLOCK are necessary, but LOCK isn't. USE is necessary, and so is CLIMB.
LIGHT is necessary (e.g. LIGHT TORCH), but ENTER isn't.

SAY is semi-necessary; just adds to the game.
EXAMINE (and the shorthand, EXA) is absolutely necessary.

PUT is absolutely necessary. SEARCH is absolutely necessary.

I'm probably forgeting several commands, but you get the general idea. :)

If you have any questions, comments, suggestions, inquirements or otherwise, please
send me electronic mail via:

dunric@yahoo.com

If ADVENTURE could be crammed into 16K, then I don't see why WFPC can't either.

Regards,

Paul
dunric@yahoo.com

Welcome to the comp.sys.atari.8bit newsgroup!

Atari 8-Bit Computers

Vendors and Developers List

"A comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users"

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current
mailto:mcurrent@carleton.edu

Please refer to the latest version of this FAQ list whenever possible!

Available via these locations and Usenet FAQ archives everywhere:

http://www.faqs.org/faqs/atari-8-bit/vendev/

ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/vendev

news:comp.sys.atari.8bit news:comp.answers news:news.answers

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, are NOT listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.
```

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection. Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.
"Hi!" to Alex Martin, who has done the same for the land of Poland.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

>
>Alan
>

It should probably also be noted that only those who use MS Outlook
(Express or Regular flavours) need worry, as Outlook has security
holes that allow E-Mail viruses acess to Outlook's internal (address
book) and network (send E-Mail to everyone in the address book)
functions. The "I Love You" virus of recent months is a good example
of this. If you use pretty much any other E-Mail client (at least, I
haven't heard of any other client having these exploitable
vulnerabilities) then you'll be safe.

And of course, common sense dictates ones never executes any software
attachments from unknown or unreliable sources, and even from reliable
ones, have your virus/trojan scanner frisk 'em before you do.
(Non-executable attachments, excluding Word documents or other
documents that can contain potentially harmful scripts or macros, are
exempt, since they cannot contain or propagate viruses)

There are tons of places you can grab both The City and The Dungeon to
play on emulators. The only two emulators that can run them are
XL-It! 0.20 and Atari800/Atari800Win 2.4 and above.

This is because Jeff hoped that one would eventually be produced for
the Jaguar, 'cos frankly, as far as he was concerned, Tempest still
wasn't quite Tempest without the rotary controller. And as fun as T2K
was, I'd have to agree. :-)

Hello Craig, How's the atari going, keep the faith and keep those atari's humming brightly

Anyway Re: 1050 supplies

Contact Computer Exchange (CEX)- Retro Dept. in Rathbone St or Place London W1, I cant recall the telephone no at the moment, but I guess they are on directory inquiries

They MAY have extraenious suppl's of 1050's w/dos, I bought an indus gt from them (working b/no psu or disks) for my a8 (130xe/800xl etc)

It also depends if you want a "stock" (as in standard) 1050, or if you want a modified (as in usd/lazer/happy/arch11/super speedy etc) 1050, as I recall that CEX only supply or deal with stock/standard 1050's

Keeping the Atari happily humming brightly

Hello ther DR Teele, How the atari goin', keep the faith and keep the atari humming brightly (as in outshinnig the crapshit called the pc/mac)

Anyway re: mem prob's. with the 130xe

If memory servces me right, the only version of the xe o/s the featured the scannin of the additional mem past the 6502's 64k limit thru the self test, was the o/s that came with the xegs (sometimes refered to as the 65xe games sys.)
Although Atari had plans to release this patch with standard xe's, they didn't get round to it... shame

What version or hack of the xe o/s do you have, the chance of you having this particular version is highly unlikely, unless you know someone at Atari US (as the UK version hadn't been completed, so I'm told), or unless you have a hack version of the xegs o/s

Sorry I couldn't be much help

Keeping the atari humming brightly

Hi, I am looking to trade for the Atari 400/800 cartridge Berzerk. I
can trade the following for it:

PSX:

Samurai Shodown III
Soul of the Samurai

PC CD-ROM:

Maelstrom
Outpost
Lords Of The Realm II

Odyssey2: (In box with instructions)
Speedway/Spinout/Crypto-Logic
Bowling/Basketball
K.C. Munchkin
Thunderball

NES:

Golf
Super Mario/Duckhunt
Adventure of Zelda
Deadly Towers
MAD
Ghost & Goblins
A Boy and his Blob
Xevious
Friday the 13th
Legend of Zelda
Ice Hockey
Xenophobe

Thanks.

Message-ID: <Pine.GSO.3.95.iB1.0.1001005092342.29642A-100000@vtn1>
Source record: 41446

While we're on the subject, this could affect anyone with a permanent
internet connection:

A friend kept getting Visual Basic script viruses appearing in his
W98 Startup folder. I installed a little program to monitor the
contents of the Startup folder (look for Monidir1.zip or email me for a
copy) and sure enough the damned things appeared out of nowhere.

Since he's on a cable modem through a network card I suspected the
things were coming in off the internet. Apparently they were because
they stopped appearing as soon as I went into the properties for
his hard drives and disabled File Sharing.

These virus scripts are only dangerous if they run and, to ensure
that, they locate themselves in the Startup folder usually with
Hidden, System and Read Only attributes so make sure your file
view options show all files.

I use Eudora. I don't think it is vulnerable much at all. The recent
problems with email viruses are almost universally Micr osoft Outlook
viruses, I think.

Outlook runs all these scrtipts and of course the calendar function
and even goes to the WWW _automatically_ if someone sends you an
email with the URL expressed a certain way. I get the Fedex email
newsletter at work and was at first amazed at the presumption when
Outlook opened up a minibrowser and hit the Fedex web-page, without
any confirmation or request from me.

Outlook is horribly vulnerable, however Eudora is not, in my
experience. I recommend Eudora, which has a freely downloadable
uncrippled "lite" version.

Hello Carmel,
the "LDS-Freezer" was created by Ulf Petersen/Germany. It is a very simple (and not so effective) freezer program to freeze games (cassette/diskette; works better with cassette !) or to use the well known freezer pokes... The program can still be ordered from PD-World-Versand /PD-Mag, Sascha Roeber, Bruch 101, 49635 Badbergen, Germany (no homepage, no E-Mail!); Believe me, the program is not worth its money - but thats your choice. All freezed programs need a special boot program which can be found on side 2 of the LDS freezer (but: if this bootprogram goes bad one day,you cannot use the freezed programs anymore; reminds me of the Happy Compactor: all programs compacted with it could only be used with a happy drive...) greetings - Andreas

Stupid question, but why would the XEGS OS have had the facility for
scanning >64K when it had only 64K? (And why, oh why, did they make
the function keys that horrid pastel colour?)

Well,
afaik there are only two Zeppelin games from eastern Europe: Fred and
Mission (Misja/Mission Shark). All other Zeppelin games were produced in
Great Britain and have british authors !! Simple, isn`t it ?!?

Some Zeppelin games were re-productions/re-releases, like Mirax Force
(originally Tynesoft), Sidewinder (originally Futureware), Phantom
(originally Microdeal/Tynesoft), etc. but only Fred and Mission came
from Poland (LK Avalon, which is still alive !! I just contacted them,
they sell their games for 5DM/german marks - a little more than 2
US-Dollars...)

> > For now the list is just:
> > Title Keystroke Required
> > -------------- ---------------------
> > Missile Command (Atari) 1 CTRL-T
Shanghai (Activision) 1 choose controller type:
mouse !
Bombdown (german programmer) 2 the same here...
Minesweeper (PPP/PD-World Versand) 2 choose controller
type...
The Brundles (KE-Soft/Kaisersoft) 2 choose controller
The Brundles Editor (KE-Soft) 3 ...
Geisterschloss/Ghost Castle (KE-Soft) 3 choose Lightgun or
mouse...
10-12 games from ZONG magazine (KE-Soft) 3 mouse games !!
Multi-Mouse manager (PD/shareware) 3 drivers for mice, TB,
etc.
Unriagh I (german adventure) 3 has driver for
mouse+Joystick
Unriagh II (german adventure) 3 the same here...
little Calculator (AMC-Verlag) 3 uses mouse only
big calculator (PD) 3 mouse, TB, Touch tab.,
joystick;
more PD games and tools 3 ...

Status: 1 = commercial; 2=commercial, PD-demo is avaiable; 3 =
PD/Free/Shareware

Thats all I know for now folks. There are many more games+tools and
especially german games+tools avaiable, since many german vendors once
sold a mouse for the A8 (KE-Soft, AMC-Verlag, Power per Post and others
did). For myself I did a small collection of PD-disks (!) that cover a)
Mouse games+tools (2 medium disk sides), b) Lightgun/Lightpen
games+tools (2 medium disk sides), c) Paddle games+tools (2 medium disk
sides) and finally d) Atari Touch tablet/Koala Pad tools (2 medium disk
sides). Anyone interested in these PD disks, just E-Mail me. Greetings,
-Andreas

6400. Artifacting in emulators?

Newsgroup: comp.sys.atari.8bit

Do any of the emulators available simulate the GR.0/GR.8 "artifacting" effect? (I.e. alternate black/white pixels produce either orange or blue depending on whether they're on odd or even columns?) (And HOW much did it suck that on PAL machines, games that used this (DROL, Ultima, etc.) just went a sort of murky grey-green colour!)

Ahem,
does the Jaguar game "Checkered flag" also have built-in code for a
rotary controller (or a Paddle) ?? The controls of this game are very
very bad. And the manual says something like that "...the controls are
like a diagram of a bell, first very soft, then harder, then soft
again..." So, paint a bell (of a church or a cathedral) and you will
see, it looks like a rotary or Paddle control...

(Maybe we can add Paddles somehow to the Jaguar...) -Andreas

But, Slime does not use or support a mouse/trackball. It however does support a Paddle controller. Afaik there are different versions of Slime avaiable, one on disk and one on cart. I only have the cart version. Maybe the disk version does a little more than the (limited) cart version. Besides, wasn`t it Slime which had built-in demos for other Synapse games ?? -Andreas

Well,
the homepage of the author, named Hiassoft (Mathias Reichl, Austria) has
it. Sorry, I do not know the URL, but you can also get the latest
(english) version from me. But aware: You need a 5,25" Atari DD(180k)
drive, a 5,25" PC DD or HD drive (DD is much better, makes less errors),
the program Ataridsk which works with DOS (not Windows!) and some files
to transfer (the program only transfers files, no bootdisks, use DCM,
ARC, ZIP, etc. to convert a bootdisk to a file).
greetings -Andreas

> mode?

Well,
that depends on your version of MC (Missile Command). there are many
different versions avaible... I know the old Atari 800 cart version,
which works correct with Joystick and Trakball, but not at all with a
mouse. The newer XL version works with Mouse, trackball and Joystick,
also the newest (built-in) XEGS version of MC. But, there is also a tape
version (and maybe a disk version) of MC avaiable. I am not sure if this
tape version behaves like the old 800 version or like the newer XL and
XE/XEGS versions... -Andreas

> Regards,
> Russg

Maybe you did not know, there is a little difference between Trackball
and ST-mouse. Although MC works with both input devices does not mean,
they are the same. they are not !! Connect the TB to an ST computer and
you see: it does not work at all !! You have to do a small conversion to
convert the TB to an ST mouse. (Plans are avaiable from ABBUC, germany).
maybe somebody already did this with Harvey`s TB (and to make things
worse: the old Atari 800 version does not support a mouse; so if the TB
has been converted to a mouse this MC version will not work with it!).

And even more appalling, Microsoft continues to get away with it. Its strange indeed that software companies aren't held to the same standards of workmanship, reliability and safety as companies that make things as innocuous as infant toys. I wonder how many more Love You's will be unleashed before Microsoft is forced to take security seriously. So, who do you sue when the contents of hundreds of workstations in your company are erased/corrupted/mailed to competitors because the vendor of your OS refuses to close even the most blatant security holes? When the Love You hit my previous job, the entire intranet was reinfected 3 times because of people coming in to work and opening their mail- that was just 10 or 12 people and it still took several days to clean up (even with good backups). Ironically, we traced it to somebody receiving the virus via Hotmail, they copied the attachment to the local drive, doubleclicked, and voila... the virus propogated thru the drive shares (which of course were set to C:\), infecting entire swathes of machines besides the server.

Did you ever hear of the presentation in the early 90's (I always forget who did it) where the guy presented a technique whereby a c compiler could insert backdoor code into a specific app, but detect when it was to compile its own source and surreptitiously put the backdoor insertion code into the new compiler? It made the backdoor essentially undetectable- since the source for both the backdoor'ed app and the C compiler was completely clean. Evil indeed.

The oldschool virus people wrote more interesting code- macro virus stuff is booring. Some of the 80's viruses were works of genius. Completely disreputable of course, but very clever. I guess some of the *nix stealth rootkits are along those lines- requiring some real engineering skill.

Let me tug on your coat for a second:

Now granted my intention was not to single out any specific flavor, but tried to stress that "closing the barn door after the horse has gotten out" seems to be the accepted work ethic. I personally like Eudora's idea, and also specify a "similar but different" feature. (Which, admittedly, should be held within a different forum)

Daniel Miller wrote:
> Outlook is horribly vulnerable, however Eudora is not, in my
> experience.

http://www.securityfocus.com/advisories/2148

This is an advisory. People may say "just and advisory". Unfortunately, the fact remains there would be no documented vulnerabilities unless one was created for the script kiddies. At that time, based merely on the "average" intelligence of those in the field, it would be address and resolved. Which is not only "whistling past the graveyard", but in no way negates the existence of exploits.

I am not advising ghost chasing, but I am bringing to light that which some may take for granted.

Daniel Miller wrote:
> I recommend Eudora, which has a freely downloadable uncrippled "lite"
> version.

IMHO, it is one of the better ones for sure, but for one reason: They take POTENTIAL exploits seriously, and work very fast in their correction. Although they have only limited resources to support their product (as anyone building on an MS platform), they *seem* to be aware of potential problem and lock them down PROPERLY.

Just to be clear...

>I use Eudora. I don't think it is vulnerable much at all. The recent
>problems with email viruses are almost universally Micr osoft Outlook
>viruses, I think.

I'm not surprised. I'm a Pegasus man, derived from my days at Dundas
Software, where we all used Pegasus. I've just stuck with it ever
since...

>Outlook runs all these scrtipts and of course the calendar function
>and even goes to the WWW _automatically_ if someone sends you an
>email with the URL expressed a certain way. I get the Fedex email
>newsletter at work and was at first amazed at the presumption when
>Outlook opened up a minibrowser and hit the Fedex web-page, without
>any confirmation or request from me.

Holy ... I'm *so* glad I don't use that crap. I hate *ANYTHING* that
does things I didn't tell it to... even web pages that stick popups in
my face piss me off. That sort of thing could be used to force a
browser window to open to a page containing a malicious Java applet.
Sheesh...

>Outlook is horribly vulnerable, however Eudora is not, in my
>experience. I recommend Eudora, which has a freely downloadable
>uncrippled "lite" version.

Pegasus is also free, and is not crippled or reduced to a "lite"
version in any way. The only time you need send money is if you want
a printed copy of the full user's manual -- but anyone with any
experience setting up an E-Mail client shouldn't have any problems.
And Pegasus has never done anything I didn't tell it to; no unexpected
popups, no scripting vulnerabilities (Well, no scripting capabilities)
etc. Plus, I like its E-Mail filtering abilities and its ability to
connect to different accounts and assume different identities. I've
filtered out plenty of spam that way...

...of course with the sheer mass of spam that's out there, my mail now
takes a good half minute to open while it goes through all my kill
filters... :-)

Both XL-It! and Atari800 (DOS and Win flavours) emulate artifacting.
Atari800Win in particular lets you choose what broadcast standard to
use when emulating artifacting. (PAL or NTSC)

The fdisk stuff I did for him about two weeks ago and added two
good, free anti-virus utilities (F-Prot and InnoculateIT).

Within a week one or the other picked up an infection in Notepad and
cleaned it.

Done as previously mentioned. Actually he doesn't need it as his
"LAN" consists of an Aptiva, IMac, hub, and cable modem but does
not actually network the IMac and Aptiva. The only reason I had
originally enabled it for him was for direct cable connection with
a laptop. Since the laptop is never networked except for file transfer
via the parallel port, I've left full file sharing on on it and configured
the Aptiva as guest with no sharing.

heh. As the saying goes: "I USED to be DISGUSTED, but now I'm AMUSED!"

I myself was always a little put-out. Here's a closed source behemoth, making billions of dollars, and charging for the open source support (MSDN). I used to become livid about the mentality. "How can they constantly manipulate their product to be defective?" Then it came to me. The poor jerks are doing the absolute, very best they can. Unfortunately, its not enough, and equates to a LOT to Little, a LOT to late. They can't even support their own product, and this is only Microsoft. They are not and have never been bleeding edge or state of the art. They are masters of plagiarism as opposed to technology. Truth be told, they are proven liars, proven thieves, and they have proven they really don't have the pick of the litter where designers are concerned.

Which brings to mind something Morton Mintz wrote: "The human being who would not harm you on an individual, face-to-face basis, who is charitable, civic-minded, loving and devout, will wound or kill you from behind the corporate veil."

Their next plan is to start again. With an entirely new operating system, on an entirely new platform, to mask the instability by changing the "common knowledge" of their product. Unfortunately, with enough people FINALLY getting it together, it really won't be that hard to pick apart since it's ONLY Microsoft.

That seems odd, the game requires 4-way movement
to play. Quoth the disk version manual:

In order to create diagonal sluices, or horizontal shields, you must keep the joystick trigger depressed as you move the joystick in the desired direction.

Trac-Ball

In order to use the trac-ball press [T] and you will engage the trac-ball mode. You may position the mark using the trac-ball and use the fire button to launch the wedges.

I update my catalogs once a week. Just before this message is posted.
So when you see a new posting, check my Catalogs for NEW Atari stuff!!

e-mail: atari@benjamin.net

I've added more and will be adding more Hardware, Software, Books and
Accessories for Classic 8 Bit and Atari ST. Plus I've just branched out
into Atari Jaguar Hardware & Games. So check out what's new on my Web
Site. I have 8 different Catalogs, & my SoftWare Catalogs are largest.
They have the biggest Byte Count. Boy! You should see my inventory! I
have Libraries of Books and Reference Material, TruckLoads of HardWare
and Crates and Crates of Software for the Classic Atari 8 Bit, Atari 64
Bit Jaguar Game Machine and the Atari ST and Newer Computer Line!

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari
64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories!
View Atari Catalogs on the Web at http://www.atari.benjamin.net & Jump
to my FTP site linked to my WebSite so you can Download Free Catalogs
or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's not an inconvenience. I do ask that you specify
Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you
by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can
attach text files to your E-Mail. Catalogs are just regular ASCII text
files so you can download them into your text editor & view them, edit
them or print them out! It would make things easier for me if you take
my Catalogs, load them into your text editor, delete what you don't
want to order and E-Mail me the rest of what you do want to order! To
expedite things, include your complete Mailing address so I can figure
Shipping/Postage and Handling. I'll be back after the weekend.

And remember, if you can't come see me today, come see me tomorrow! :-)

Source record: 41390

IT LIVES,

You guys were right. I systematically swapped each ram chip with a
known good one and low and behold Basic.
The hardest part was removing the old chips without destroying all the
chips or damaging a solder pad. Atari made a darn durable motherboard.
I was able to remove all the chips and replace them with sockets
without any damage to the board.
Been playing star wars ever since.

I want to thank everyone for the help.
I'm looking forward to getting back into the 8bit world.

Steve

6422. Atari800Win emulator config file problem

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-06 23:23:17 UTC
From: Richard Pike <RJPike@exton.freeserve.co.uk>
Message-ID: <8rlmgi$l1r$1@news5.svr.pol.co.uk>

Can some kind soul tell me where the Atari800Win 2.6c emulator stores its configuration file?

I had it working absolutely perfectly with Windows 98, then the "Atari" crashed and the program quit. Whenever I start it up again it tells me that my last Atari session "seems to have locked up" and asks if I would like to restore default configuration file. Regardless of whether I select yes or no, another requester comes up saying the Atari has crashed and then the program just quits again. I'm guessing that the configuration file has become corrupted but I can't find it to delete it and can't solve the problem by reinstalling the emulator. And I don't really want to reformat my hard disk :-)

Thanks

Richard

Because unlike with the manufacture of infant toys, lives don't hang in the balance.

It's a bit misguided to blame MS for all the commotion - is it really such a security risk to allow the user to automatically open attachments? It's obviously not a well-advised preference to set these days, but it's just a feature intended to make a users life easier (and therefore it's all the more ironic that it's become the weapon of choice for the script kiddies). But really, we just hear about it because MS software is so pervasive. Almost any e-mail client can be exploited in a variety of ways, and probably would be if any of them held 90% market share.

The fact is, Outlook can be properly used without worrying about virii - the user just needs to be smart about opening attachments. We could just as easily attach blame to the dunderheads who continue spamming their whole list of friends with lame jokes, pictures, and sound files, and who open any damn thing sent their way. These are the same people who buy into the hoax that the Postal Service is considering levying a fee against e-mail. But the real blame of course belongs to the "hackers" in the first place, all of whom have forgotten (or probably never knew in the first place) the true hacker ethic.

>share.

There are several issues here, however.

1) The ease with which the product can be exploited and, by extension,
the frequency at which it does. Since the colossal joke that was to
become Microsoft Bob, Microsoft has been hell-bent to dumb-down the PC
in order to make it "user friendly." While this is a noble and useful
goal, particularily to the technologically inept, it is the extent to
which Microsoft has overdone this to the point of becoming insultingly
patronizing that has exclusively given rise to the likes of Word macro
viruses and the I Love You E-Mail virus. It is this mindset that has
saturated Microsoft's products with ostensibly helpful, but in fact
annoyingly condescending little wizards and assumptions ("You have a
URL, so of course you'll want to open it!") that have inevitably lead
their products to be at risk of introducing the user's system to
wonderful little hacks, virii and trojans.

2) The lack of forward thinking that could have prevented these issues
before they started. Perhaps it is only retrospect that makes it easy
to see that placing limitations on IP addresses that had access to the
network's file and print sharing, NOT automatically giving E-Mails
access to critical and confidentional system functions, and NOT
allowing Word macros to automatically, without safeguards, perform
system functions that can destroy your entire computer, but these
safeguards have still NOT been placed after YEARS of painfully obvious
exploits! All Microsoft ever does is "investigate" the "possibility"
of a security breech. Sure, they've patched up many Winsock holes,
but many of those holes were relatively innoccuous compared to modern
viruses and trojans. Someone could attack your network connection
with a denial-of-service nuke, or ping you to death... big deal. Try
having someone install SubSeven on your system and
deleting/downloading things from your system, or sending E-Mail in

your name from *your* connection, or any of a whole host of other nastiness that trojan's capable of. (Visit its website, it's pretty scary stuff; BackOrifice pales in comparison)

I mean, surely it can't take years of painstaking research to discover and patch holes like this without compromising network performance!

Anyway, I could rant on and on about Microsoft's lacklustre performance when it comes both to the functionality of their applications and the integrity of their OS, but you get the idea.

>The fact is, Outlook can be properly used without worrying about virii -
>the user just needs to be smart about opening attachments.

Outlook comes pre-configured with these security risks in place, however. In this case, it's up to the user to turn these options OFF, instead of having them off by default. This is the sort of patronizing "user-friendliness" I'm on about.

It's true that it's easy to exploit Outlook, but it's still important to note that it is entirely possible to use Outlook with no risk increase whatsoever over any other e-mail client (as I said, the user just has to be smart about opening attachments, and don't let Outlook open them for you). Many reports seem to indicate otherwise, and that's just wrong.

Yes, you'll have no argument from me on these points. Understand that I'm not necessarily defending MS or trying to be an MS advocate (hey, wait a sec, are we still on an Atari group? ;). I just think that critics have enough real ammo without inventing phantom ammo, and in that spirit, wanted to point out that Outlook is not necessarily the culprit here (since it is possible to use it with no increased danger). Let's criticize MS on legitimate points, and not look to blame them everywhere possible. In this case, I think that blaming them for easy exploits is kind of like blaming the homeowner that doesn't lock his door for the robbery he's been made a victim of. Perhaps it's a foolish choice not to lock the door, but blaming him for the robbery is adding insult to injury.

Personally, the "dumbing-down" initiative that MS seems hell-bent on is my biggest complaint. Bill Gates once said that a computer should be as easy to use as a toaster. I thought that was an incredibly naive and backwards-thinking statement - a computer is *not* a toaster, and to make one as easy to use would essentially defeat the functionality and purpose of a computer. The fact is: computers are hard to use, they

will probably always be hard to use, and most importantly, that's not necessarily a bad thing. I compare computers to cars - not everyone is cut out to be great mechanic, and that's ok. Cars can still be manufactured so that any dummy can "use" them, but they still need to remain complicated to some extent to retain their functionality and power. Take away the complexity, and you take away the functionality - it's been tried before, with great failure.

Agreed. A simple fix would be to default with these options OFF.
Still, I cringe at calling these "security holes". Frankly, I want MS to incorporate *more* options like these into their software - it's their hidden settings and such that tick me off, because taking away power from the user is heading in the "toaster" direction. I want to head back in the "car" direction, and that means providing users with as many options as possible, even ones that users can hurt themselves with. An MS spokesman once stated that as the very reason that MS hides so many of its options, because "users can get themselves into trouble". Well, I'm willing to take that risk, so they should provide me with the means to do so. It shouldn't be any skin off their nose. But by all means, recognizing that the vast majority of users are not as computer savvy as me, default with these options off. And of course, I take full responsibility if I screw myself out of a hard drive some day. ;)

Look, but don't touch. I can bring this back on topic, because I learned to hack during the Atari heyday. It was great fun to see where you could go out there, but I was lucky enough to be taught by old-school types who taught me the proper hacker ethos: look, but don't touch. Take something that's good, and look for ways to make it better. Always share. Never harm or keep secrets. Pretty simple stuff, really - maybe we should be equipping today's kids with Ataris to start with, if only to teach them a little humility before giving them the great power of today's PC. ;)

Don't forget, this is how they make their money.

Using your example: The home owner is untouched, and the renters get looted. The Landlord's response is "*Shrug* What-cha-gonna-do?! *Shrug* Musta-been one of dem-der 'bad' locks? *Shrug*". To go beyond Outlook and look at the structure of the OS, in the same vein, the owner has built all the houses on a fault line and in a bad neighborhood, next to a toxic waste dump. Only the truly desperate, very poor, and very uninformed would even consider renting there. It's not only making money on the ignorant and foolish, but allowing them to be victimized as well.

To remind: the ones abused here are the users, not those that make the OS.

Just to be clear.

Mike Kohary wrote:

Learned there too. I was in the back row... next to Kenny... Sneaking peeks at D&D books .... I mostly agree with the philosophy, and encourage it. Unfortunately, when a company turns a deaf ear to problems, who do you blame BESIDES the company? With M$ I will continue to dig up, and generally keep secrets. Since, if they're not interested in genuinely solving their problems, who will appoint themselves advocate for them?

If it were soap, you'd just go buy another bar at the store.
This is NOT soap.

Another great site.

I used to use Gibson's stuff (can't remember name) on my '286 machine's hard drive and never had a problem with the drive. It would probably take days to run on my Pentium 100's 2-gig drive and who knows how long to run on my Pentium 800's 30 gig drive!

But Gibson is a name I'd trust.

For heaven's sake put a firewall on it!!! You can get firewalling hubs for not much more than a plain hub- they won't do anything fancy, but they will he a heck of a lot more secure than any Windows machine can ever be. Virus detectors are all very well, but they amount to a catchup game and will always lose in the end (if they don't break Windows themselves). The only way to reasonably secure a Windows system on the internet is to firewall it and not use Outlook.

I had the same problem, the way I was able to solve the problem is
to delete the registry keys associated to atari800win.
I found the easiest way to do this is run regedit and do a search on
atari and delete the key Atari800win.
When you run the program you should be able to reconfigure without
that error.

I have my doubts about .NET- it certainly won't be more robust than what they sell now, but the failures will often be disguised on the server side, so user's won't see the crashing and insane hardware demands. So here they are inventing an entire new language subsystem- presumably because keeping VB and Visual C working is getting too complex. I doubt it can be stable because such stuff needs years to mature. Lord knows how security will be implemented... In a way $soft is painting itself into a corner, moving from a company that sells a general purpose product to one that restricts its users to a specific usage model.

I'm on a 56k dialup (ADSL in two months, after I move). Right now, I run Zone Alarm on a PC that is networked, with File and Printer sharing enabled. However, by not binding sharing to TCP/IP, it does not appear.

Probably the best site to check out the security of your Windows PC is http://www.grc.com. Steve Gibson has Shields Up running there, which will probe some well-known problem areas on your PC and report back to you. He also gives a very good overview of how and why to secure your PC.

He's also go "Opt-Out", a program that kills some of the so-called "Spyware" programs that report back on your activities, plus other neat stuff. Best of all, he still codes in assembler; few of his programs are over 100k.

Mobile-Mind develops system and application software for the SIM chips inside mobile phones. We are seeking full-time software development, testing and quality control engineers who are interested in working with smart cards, IP protocols and mobile and wireless platforms.

Knowledge of the C programming language and software management processes is required. Experience with real-time and embedded systems is preferred as is a willingness to work at the boundary between hardware and software. Knowledge of 8051 and 6805 micro-controllers and 8-bit assembly language is a definite plus. Hands-on experience with software development and testing in either a formal education or an industrial setting is assumed. Salaries are competitive.

Company Name: Mobile-Mind, Inc.
Address: 24 Church Street, Watertown, MA 02472
Phone: +1 617 926 6888
FAX: +1 617 795 1630

Funny.

I had an XF551 for many years, and never experienced a problem with it. When a friend, a qualified electronics service technician, did service on all my drives, he made the same comments you did, but gave me a couple of tips for keeping the drive working:

1. If you have to move the drive (take it to a user group meeting, for example) keep the SIO cable(s) connected at the drive end but make sure there's no strain on them.

2. It's bad thermally to stack drives. Avoid this if you can. The XF551 can be left on, and it will get warm, but not as warm as a 1050.

I think that makes sense.

$.02, if you want to use a 16k EPROM vs an 8k, most programing
hardware/software let's you pick the starting location of the burn. I
usually just burn two 8k images into the 16k EPROM so I don't have to do
stuff like think.

I think I missed the original post - your problem wasn't a red screen
o'death was it? I've got an 800xl and a 600xl that both do that and
getting 'em running again would be smart.

cheers

My 800xl booted directly to self test with it showing some bad memory
blocks. I finally found the bad ram chip and it came back to life.

I do have a 800 that gives only an orange screen when powered
up. That's my next project.

I don't have a service manual for an 800xl yet.
There are plenty of helpfull people in this group.
If you post a message with more info someone here
might be able to point you in the right direction.

> Because unlike with the manufacture of infant toys, lives don't hang in
> the balance.

But potentially many millions of dollars, not to mention national security can be in the balance. There are lots of wide open Windows boxes in govt systems all over the world, most of which are on poorly configured and secured networks. Thats arguably at least as significant a risk as a toy that could become dangerous in some extremity of circumstance. I'm not saying toy danger is irrelevant, only that there are national security risks being incurred right now by having Windows be designed & implemented as it is. Consider the Love You virus. I personally know of several gov't facilities that disabled their email systems to suppress the virus spread. Now what would have happened if a really well written virus spread thru stock exchange systems, destroying and corrupting huge volumes of data- or maybe overloading and disabling networks that manage life support systems for critical care wings in hospitals. eTerrorism, if you will.

> It's a bit misguided to blame MS for all the commotion - is it really

> software is so pervasive. Almost any e-mail client can be exploited in
> a variety of ways, and probably would be if any of them held 90% market
> share.

It is absolutely and always bad practice to allow unregulated execution of untrusted code at a user's priveledge level without their consent. There isn't even a big warning dialog that gives the user an option to turn off the scripting when they first configure their account. At least Java embedded in a webpage has to run within a particularly designed environment- but there is essentially no regulation of the Outlook virii, they could just as easily fdisk your c drive as email your entire address list some kind of nasty porn using a clever header & message body generator to make the mail really look legit. You're right though, there are exploits for other email

systems, but they are LOTS harder to exploit than a script directly,
automatically and intentionally executed at the user's priv level.

> The fact is, Outlook can be properly used without worrying about virii -
> the user just needs to be smart about opening attachments. We could

True, yet it would be reasonable to ask why we all get to have this
wide open security hole enabled by default. Email is well known to be
an intrinsically untrustable communication medium, yet by default,
Outlook treats email as trustable. If there were an option to only
execute scripts on email that is pgp signed and encrypted by a user
with some locally set trustworthiness flag, I would be more amenable-
yet there is no option in Outlook to set that up as far as I know.
That would almost be a trivial enhancement, Microsoft already has
nearly all the crypto they need built right into Windows. (though it
is something of a mess- in fact, if I'm not mistaken, a script virus
could easily extract all your crypto data and decrypt anything that
relies on the security of the cryto data itself)

> just as easily attach blame to the dunderheads who continue spamming
> their whole list of friends with lame jokes, pictures, and sound files,
> and who open any damn thing sent their way. These are the same people
> who buy into the hoax that the Postal Service is considering levying a
> fee against e-mail. But the real blame of course belongs to the
> "hackers" in the first place, all of whom have forgotten (or probably
> never knew in the first place) the true hacker ethic.

Yawn. Hacker ethics.. whatever. Thats like saying people who spray
graffiti all over subway trains have forgotten some sort of artistic
ethics. In any population you'll get those who will do something just
because they can- not to mention those that really want to vandalize.
Truly, crackers must be held accountable for what they damage, but
manufacturers of software that make it easy for such things to occur
also bear some responsibility. In my opinion, it is incumbent on
authors/manufacturers to supply defaults in their systems which
protect the interests of those users who aren't inclined to learn the
full properties of the system.

Message-ID: <39DFD808.357AB25F@mailbox.bellatlantic.net>
Source record: 41305

I just got an XF551 drive from an auction on Yahoo. I need to thank Larry (White ?) who sent me documentation on upgrading it to 720K 3.5 . The docs worked without a hitch and the drive seems to be working great.

If anyone else is thinking of doing the mod themselves, some things I have noted:

Its been said before, but The main boards suck! This is really wierd since 1-there is only a handful of parts so their cost must have been DIRT cheap, 2-They used WIRE jumpers to go over the top of the board (its only single layer) which you think would be cost intensive, 3-solder breaks on the SIO connectors would have made these drives Return-for-Service nightmares

The ROM chip is socketed (thank God). It is 27C64 compatable, so use one of those. If you can't and use a 27C128 instead (like I did) pull pin 26 (A13) up and tie it to ground. The board pulls it to +5 so your code is sitting at the bottom of memory and the processor is ALWAYS looking at the top 64K of the device.

While you have it open, add the power LED mod. I didn't and I've already left it on all night long without knowing it was on.

Thats about it.

Tony

6449. US Alpha Load / SIO2PC

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-09 00:00:00 UTC
From: mark__e <mark__e@my-deja.com>
Message-ID: <8rru3pfmt1@nnrp1.deja.com>
Source record: 41320

Wondered if anyone could help..

I'm currently backing up my Atari disc collection, and am using the latest version of the SIO2PC cable & software. Everything works fine, including ultra speed emulation through spartados.... but...

I put the bulk of my bootdisk collection onto the Alpha Load menu system for space saving, the copying / formatting programs that come with it don't seem to work correctly with the SIO2PC emulation.

I've searched the FAQ's & the net, but I can't find any documentation with people having a similar problem ?

I can't actually remember if the Alpha Load menu system was a local production, of came with the US doubler I had put in my 1050, everything still works fine with the real drive ?

any help appreciated

Mark

Hello Matt, Hows the Atari Humming

Anyway re: scanning the additional 64k mem thru the self test on xegs o/s

Dont ask me why Atari did this, I only remember because, I mentioned to an ex director and employee of computerhouse London (Atari dealer) the feature of a new version of the xe o/s (was'nt released) that allowed you to test for additional mem past 64k thru the self test
He/They told me that Atari had released this feature only on the xegs o/s, with the intention of eventually releasing it on the xe o/s (which Atari never did)
It was briefly mentioned in Atari User Mag (Database/UK)

Why not, it even has the PBI code?

The difference between 1 version of something and 2 versions of the same is a lot of money. The >64kB test (which only goes to 128kB) was also used in the 800XE and 65XE that where sold in resp. Germany and Poland. Their PCB's said 130XE, but it only had two 64 by 4 RAM chips. Same ones as the XEGS uses.

>
>Any tips will be greatly appreciated.

Have you checked inside if there really is 128kB?

There should be either 4 chips with 2464 on them or 16 chips in the top
lefthand corner.

There should also be (slightly to the left and below the center a chip called
CO25953).

>P.S. - If a fix is successful, I will move on to one or all of the

Who made that mod. My XF551 also has a Power LED. I used a resistor (I guess it was 150 or 100 Ohm), a green LED and one of them pre-fabricated cables that just fit between the 'PC 5.25" drive mech power cable' the XF551 uses. Now I know when the XF551 is still on.

6458. Scott Adams is back on the Atari 8 bit

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-09 00:00:00 UTC
From: nisse-ma@reze-1.rz.rwth-aachen.de
Message-ID: <8rsgj2$i1v$7@nets3.rz.RWTH-Aachen.DE>
Source record: 41329

Howdy folks

The ABBUC Magazin informed me that Scott Adams has written a new Atari 8 bit game, that can be found at www.msadams.com

If enough people respond, he will keep writing new games.

Howdy folks

I need a scope to test some signals on my Atari's. But money is tied, so...

Would it be possible to create some kind of scope. Even the Gameboy can now be turn into a scope that will do 100Hz maximum. But 100Hz isn't enough.

I know the Atari can not display a 1.79 Mhz signal, but the division could be handled outside the Atari.

Would that be possible???

> Would that be possible???

Limited <old> knowledge base so there may be better info: The cheap AD converters are clocked and have some type of (E)nd (O)f (C)onversion pin.

All they do is have a binary counter and a resistor network on the chip that feeds a comparitor. As the binary count goes up, the reisistor network provides an increased voltage to one side of the comparitor and the other side has the analog signal applied to it. When the counts climb high enough to put more voltage on the comparitor then the analog signal, EOC pin goes high and either the count is put out on a bus in some manner or the clocking has been done by the micro so it it keeps track.

Because of this clocking, you never get a fast conversion. That is, if you are running it under software control, an Atari running at ~.1 mips can only tickle the clock line ~25k Hz. If you are doing a 7 bit resolution, that means for full scale you have to count to 128 for every conversion to keep the sample rate constant. => 25k/128 or 195 Hz sample rate.

Now you could get around it by just running the clock line separate with a 555 or something and run a timing loop, but no matter what you do you will never get better then ~25k Hz due to [loop INX LDA PORTA BNE loop].

If you want any better performance then this, you will have to go to something like an ADC801 type, the ADC804 is just a less accurate 801 and can be bought for $2-$3. For us, I think an 804 is a good choice since it runs on a 5V supply, ~100 micro sec conversion rate, 8 bit resolution. You could hang one of these on 2 joystick ports or hardwire it under the hood. Just pull a line off the 74LS138 to memory map it into either $D600 or $D700, and one inverter for the separate R/W lines it uses. I haven't checked the National Semi web site for data sheets, but I would bet they and

others have them available.

But down to the nitty gritty: How cheap is cheap? You could add the same functionality to a joystick port. Just a set of binary weighted resistors, an op amp with its output tied to a trigger input acting a comparitor.

The 1.79 mHz is another story all together.

Hi Dan, pretty common, and part of their "character". I use a teflon based lubricant fron Tany (Radio Shack) on the two guides inside the drive very sparingly, and this seems to work wonders. Taking the top off to do this (4 screws) also gives you a chance to check and if need be, adjust the drive speed.

Hope this helps

hi!

can somebody explain how to play back a sound file from a
demo/game/whatever?

i have the program "theta music composer", and it saves the player +
the song at once. at least i think so. sooo, how can i load and play
that sound from my program? i suppose i must call the player every n
milliseconds or something, but how does it EXACTLY work?

btw, if there are any ppl out there who code demos/games on the atari,
please contact me, i am very interested in some contacts!

On Sat, 07 Oct 2000 12:07:51 -0700, Mike Kohary
<mkohary@earthlink.net> drooled an embarassing wet spot in his lap as
he typed:

>It's true that it's easy to exploit Outlook, but it's still important to
>note that it is entirely possible to use Outlook with no risk increase
>whatsoever over any other e-mail client (as I said, the user just has to
>be smart about opening attachments, and don't let Outlook open them for
>you). Many reports seem to indicate otherwise, and that's just wrong.

Oh, I'm not saying Outlook can't be made safe. My whole argument was
with the fact that it is, by default, NOT safe, and it is left up to
the user both to make themselves aware of the risks, and to safeguard
against them. Yet, Microsoft have not taken the initiative to provide
the user with information on the risks of certain aspects of their
software. A much better approach would be to default these options in
the OFF or DISABLED position, and then when/if the user wants to turn
them on, inform them of the risks of doing so. It's not only the
sensible thing to do, it's also the responsible thing to do.

>Yes, you'll have no argument from me on these points. Understand that
>I'm not necessarily defending MS or trying to be an MS advocate (hey,
>wait a sec, are we still on an Atari group? ;). I just think that
>critics have enough real ammo without inventing phantom ammo, and in
>that spirit, wanted to point out that Outlook is not necessarily the
>culprit here (since it is possible to use it with no increased danger).
>Let's criticize MS on legitimate points, and not look to blame them
>everywhere possible. In this case, I think that blaming them for easy
>exploits is kind of like blaming the homeowner that doesn't lock his
>door for the robbery he's been made a victim of. Perhaps it's a foolish
>choice not to lock the door, but blaming him for the robbery is adding
>insult to injury.

Again, it's not an issue exactly of not locking the door, but rather a
variant of the old saying about locking the stable doors after the
horses have already bolted. I agree that I'd like as much power as I
can comfortably handle, and more besides to grow into. I'm a hardcore
power user to the extreme. I love my shortcuts, features, etc. I
wouldn't trade them for the world! But to give the average user this
much power right off the bat is foolish and irresponsible. Give them
lots of options, but at the very least do it in such a way as to
prevent them from the possibility of falling victim to outside malice
such as trojans and virii. Let the user choose the level at which
they feel they are comfortable working at, and give them the options
to open more when they are ready and understand the potential risks

involved in doing so. It's about the most basic common sense I can
think of.

Note that I am not accusing Microsoft of having any...

>Personally, the "dumbing-down" initiative that MS seems hell-bent on is
>my biggest complaint. Bill Gates once said that a computer should be as
>easy to use as a toaster. I thought that was an incredibly naive and

>necessarily a bad thing. I compare computers to cars - not everyone is
>cut out to be great mechanic, and that's ok. Cars can still be
>manufactured so that any dummy can "use" them, but they still need to
>remain complicated to some extent to retain their functionality and
>power. Take away the complexity, and you take away the functionality -
>it's been tried before, with great failure.

No arguments there. Computers are not household appliances. They are
powerful tools that can be used for a wide variety of applications,
and should be regarded as such. Microsoft has been trying to take the
computer, which is capable of a whole gauntlet of different uses, and
try to market it as if it were a swiss army knife; all these great
tools in one tidy package. Pull this out and you can word process.
Yank that out and you can play Quake. Slide the little gizmo over
there out and the London Symphony Orchestra will pop out and play you
a concert. Or at least as much of one as they can before they crash
and need to be rebooted.

Computers have never been simple, and their level of complexity over
the years has only increased. There is a learning curve to computers
-- a pretty steep one these days, and to try and cover it all up in
the name of marketing to try and reach all those technophobes out
there is rediculous. It isn't a toy, a VCR, a toaster, or a stick of
gum that explains patiently why you should eat it. If anything, it
has more in common with the human brain than anything else -- except
of course for the bits about independent thought and self-awareness.
They're complex, and capable of a wide variety of tasks. They're just
better at it. :-)

>Agreed. A simple fix would be to default with these options OFF.
>Still, I cringe at calling these "security holes".

But they _are_ security holes. Why on Earth would you want to give an
E-Mail message the power to rummage through your address book and then
proceed to E-Mail everyone in it? I can't even think of a practical
application for such a "feature" except *maybe* remote handling of a
mailing list. Even then what's the advantage?

> Frankly, I want MS
>to incorporate *more* options like these into their software - it's

>their hidden settings and such that tick me off, because taking away
>power from the user is heading in the "toaster" direction. I want to
>head back in the "car" direction, and that means providing users with as
>many options as possible, even ones that users can hurt themselves
>with. An MS spokesman once stated that as the very reason that MS hides
>so many of its options, because "users can get themselves into
>trouble". Well, I'm willing to take that risk, so they should provide
>me with the means to do so. It shouldn't be any skin off their nose.
>But by all means, recognizing that the vast majority of users are not as
>computer savvy as me, default with these options off. And of course, I
>take full responsibility if I screw myself out of a hard drive some
>day. ;)

Naturally -- but you also have to remember that since Microsoft is marketing their consumer OS (Win 9x/Me) to even the sort of people who try to program their VCR and end up crashing the stock market, they should take into consideration that these are the people who are going to clog their technical support lines almost perpetually with questions like, "Where's the 'Any' key?" and "I answered 'Yes' when it told me 'The contents of drive C will be permanently erased!' and now my computer won't go", and so should provide them with some sort of guide to at least _try_ and protect them from themselves. It's all very well to hand someone the keys to a new Porsche, but if they have no idea that they're not actually _supposed_ to make the needle on the spedometer go all the way to the right, you're just asking for trouble.

When I wrote software on the ST, I used to tell my beta testers, "Don't use it. Abuse it. Do everything that is inhumanly possible to crash it. Do things you couldn't imagine even the most inept, most braindead user would even think of doing." Because it's inevitable: there is ALWAYS going to be at least one person who will do exactly that, and will somehow come up with 10 other things that would make your head spin trying to figure out exactly why they actually wanted to DO that, and what possible effect they were expecting it to produce when they did.

Microsoft should at least consider doing something similar. Don't think so much about what they think people want... think more about what kind of mind-numbingly stupid things people are going to _do_ with it.

>Look, but don't touch. I can bring this back on topic, because I
>learned to hack during the Atari heyday. It was great fun to see where
>you could go out there, but I was lucky enough to be taught by
>old-school types who taught me the proper hacker ethos: look, but don't
>touch. Take something that's good, and look for ways to make it
>better. Always share. Never harm or keep secrets. Pretty simple
>stuff, really - maybe we should be equipping today's kids with Ataris to
>start with, if only to teach them a little humility before giving them
>the great power of today's PC. ;)

Hehe... y'know, my father recently got into computers after having seen the many years I've spent in front of one and showing him the sort of things that could be done with them. I got him the basic system, and threw in some spare parts of my own, I bought him books and got him tutorials and the like. But he just blasts ahead on his own trying to learn everything yesterday. He doesn't understand exactly what a hard drive is -- he thinks the hard drive refers to the whole tower -- and he doesn't understand the difference between hard disk space and RAM, but he's hell bent on learning how to retouch photos, print forms, and record and remaster old vinyl. For years I'd always thought I should get him to start off where I did: on an Atari 8-bit. I learned all the basics -- including BASIC -- about the system, DOS, and grew into things like assembly programming, the general architecture of the computer, and so on. I look back and think the Atari was just a fantastic learning tool. At the most basic level, it had everything you need to know to understand even modern computers: a graphics chip (which evolves into a video card), an audio chip (sound card), a CPU and, therefore, a motherboard, RAM, floppy disks, hard disks and controllers, peripheral drivers, etc. Moving to the ST gave me experience with a graphical interface. From there, as backwards as it was, the PC was a snap.

Of course, my dad would never go for it. Pity, though... my Dad never touched any of my Atari machines. Would have been nice for him to have grown an appreciation for the Fuji. :-)

I've had success taking the boot files off the menu system and back
onto individual SD ATR images that boot ok, and I've managed to get the
formatting program working for the Alpha Load over the sio2pc link, so
what I could do is post the ATR files on my web site for the menu
creation software and formatting & disk copy etc and post the link in
the next couple of days then you could re-create a menu for real, to
test.
I've started disassembling some of it to work out what's going on as
the files are very small, but I'm a bit (very) rusty, and never was
that hot at it :-), even if I could modify the extraction program so it
just extracted SD to drive 2 instead of just 1 would be a help, I'm
working on that at the moment.

It's strange, it's definitely working at ultra speed, with the 3 sector
slow beep, then off you go, but if I try and copy it with sparta Dos it
says it doesn't recognise the formatting.

Will do, I hadn't thought about multi-boot disks, I'm sure I've got the creation program for them somewhere, I haven't got around to indexing everything yet !!, I'll have a dig around, I wasn't that organised when I was younger, not that I'm much better now :-)....

I'll work on the Alpha Load menu system for a while as well, to see if I can work something out, that would be my preferred option.., probably just put my utilities onto multiboot for now to save my real disk drive, come back for the rest when I work it out (hopefully!), it can't be that far removed I wouldn't think.

6475. IRC Chat Tonight (Tuesday, 10th October, 2000) on EXPANSIONS

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-10 00:00:00 UTC
From: DCM01@USA.NET
Message-ID: <39e257aa.1627881@news.CIS.DFN.DE>
Source record: 41200

This announces our weekly IRC chat for Atari 8bit enthusiasts. It's scheduled for September 26th, 2000, 10:30 pm Eastern US time.

Here are the corresponding times for some other places, choose the one near you.

California: 7:30 pm. Colorado 8:30 pm. Texas 9:30 pm.
London, England: 4:30 AM. Berlin: 5:30 AM. Hong Kong: 11:30 AM.

The topic for the chat will be "Expansions." We hope to get in a good discussion about what sort of expansions are available for the 8bit, what expansions are practical to program for, what is the maximum you can expand your 8bit to.

General Atari8 chat is also welcome.

This will be a standard IRC chat. It is not a web-based chat on your browser. You need an IRC client, such as mIRC. mIRC is really easy to set up, and you can find it at www.mirc.com. Not to advertise it, there are other great IRC clients for many platforms, but mIRC is sort of the standard.

The chat will be on Amiganet. Here are some servers that will get you there:

irc.whiterose.net
thule.no.amiganet.org
linux.us.amiganet.org
au, uk, se, no & us.amiganet.org

Once you log onto a server type "/join #atari8" and we will be there waiting for you I hope!

6476. FA: ICD P:R: Connection

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-10 00:00:00 UTC
From: tbdcfd@my-deja.com
Message-ID: <8rvu1d$nh9$1@nnrp1.deja.com>
Source record: 41201

For auction on ebay, ending Oct. 11, 2000 -

* ICD P: R: Connection for Atari 800

* Printer and Modem Interface for Atari computers

* Allows you to connect RS-232 serial or parallel printers or modems to your Atari

* Includes interface, instructions, and original disk

Current Bid: $1.00

Source record: 41203

You are in an empty room with compkid <collier.steven@acd.net>.
There's a rock in the middle with "Y2" written on. A hollow voice
says:

>My 800xl booted directly to self test with it showing some bad memory
>blocks. I finally found the bad ram chip and it came back to life.
>
>I do have a 800 that gives only an orange screen when powered
>up. That's my next project.
>
>I don't have a service manual for an 800xl yet.
>There are plenty of helpfull people in this group.
>If you post a message with more info someone here
>might be able to point you in the right direction.

I already did and most pointed towards hot RAM chips; nothing definite
though.

cheers!

6481. Need help with a 130XE

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-10 00:00:00 UTC
From: Puppy Dawg <swallow@intergate.bc.ca>
Message-ID: <39e406ea$1@newsserver1.intergate.ca>
Source record: 41206

Hi.

At this moment, I'm trying to "tweak" a 130XE. I picked it up for $4 (wow!!!!), and most of it actually works. I had to steal the keyboard from my 65XE (the start key didn't work on the 130), but aside from that, it's not too bad. It passes the tests with flying colours, no bad memory (that it can scan).

My problem: This 130XE has really bad intereferance problems. I am fairly sure its not a locallity thing, as it is occupying the same space as the 65 did, and it had no problems. I still have the 65XE to steal parts from. Do you have any idea what might be causing the interferance artifacts in the 130XE? Suggestions?

Thanks.

Puppy Dawg

Yeah, All my Atari DOS & mulitboot games were converted to run off the Alphaload menu disks too. I converted all the programs i wanted back to multiboot disks and took them across. Yes a slow process, but worked for me at the time.

If you find a solution, please post it in this newsgroup..

That "Alpha" business is a new one on me; Compute! had a utility for putting multiple boot disk data sections on a single diskette and we had lots of 3-sector boot loaders for binary .EXE files, and seems like I heard about the "Pill" and "Happy" each allowing some kind of custom de-protection scheme which I never had.

Can you provide any details about how it was used and how it functioned?

-Ron

I don't have a solution but I admire the problem.

Why do all the XL/XEs have F1-F4 on the keyboard test when only the
1200, 1400 and 1450 had those keys? I heard rumors that some of the
130XE's had the expanded memory test, and that these machines also used
64k*4 ram chips instead of 64k*1 (The XEGS had 64k*4 chips).

Because noone bothered to rewrite the self-test code when the 600 and
800XL's were built and noone bothered again when the XE's came out.
In fact, the default 1200XL function key routines are all coded into
the XL/XE OS.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

I've got one too and I can state that it does have the extended RAM
memory test. The XEGS has the code for that same test but not the
memory so it defaults to a standard looking test and one would never
know it was there. What I can't figure out is why the europeans call
it the 800xe when it states very clearly on the board 130XE (64X4)?

Did you know that if you take the keyboard of an XEGS apart you will
see 900XL molded into the case?

You'd think that anyone with a broadband connection would try to protect
their equipment as much as possible, especially since the safeguards are
simple and often inexpensive.

A firewall, software or hardware, is always a good thing to have, IF it's
configured properly. ZoneAlarm, free to an individual, non-commercial user
and inexpensive in its commercial form, has received very good reviews, as
have other such programs.

A visit to the Gibson Research site will give you a good idea of your
machine's vulnerability.

Using a router/switch, like the one made by LinkSys, to connect multiple PCs
to a cable or DSL modem affords some protection as well.

But, by far, the simplest kind of protection you can have is to make sure
that File Sharing and Print Sharing are DESELECTED!!!!

Hello Boyd/Melee, Hows the Atari humming

Re: Xe Mem test thru self test

As Far as I know, no european xe's (non xegs) have this patch, and I
don't recollect Atari officially/unofficially releasing it in the US,
unless you know differently, or you skanked it from Atari themselves

What the hell was the 900xl ?

No I didn't 'skank' it from anywhere except the otherwise normal
looking 130xe itself. When I poped the top off of it, I freaked out
because there were only four memory chips there instead of the usual
16. When I ran the selftest, I really freaked out when I saw
the 'extra' four large blocks of green memory show up at the bottom of
the regular blocks. A little investigation showed a whole new routine
in the selftest code that tests first for extended memory and if there
then go on with new code or loop back to do test again if no extra
memory.

I don't think Atari announced it or more people would know about it.
And its just my assumption that this is what some people are calling
the 800xe, I don't have a copy of that OS ROM to compare with. But I
do have the XEGS ROM and its identical in its self test code. The XEGS
does have a few more lines of code in it to test $D01F to turn on
Missle Command, but other than that handful of code, its the same ROM
as my 130XE (64X4). So again, I assume the 64X4 came first, and that
makes some kind of sense because Atari never used (16) 64X1 memory
chips again. The XEGS uses 2 of the 64X4 memory chips.

Perhaps the 900XL was the preliminary name of the XEGS, the 'inside'
name of the system before marketing got a hold of it. I don't know,
but I do know that the text '900XL' is clearly readable molded into the
case on the inside of the keyboard case of the XEGS, at least on the
one I took apart (again, I freaked out). Atari could also have meant
to move the keyboard off of the 800XL, made some prototypes (saved the
dies), trashed the idea and then revived the seperate keyboard idea
with the XEGS and just reused the old dies. Who knows what happened

inside Atari at the very end, you tell me and we'll both know.

I am auctioning off a nice Atari 400 system. You can find it at the
following URL:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=461840666

If you are looking for a TI-99/4A Peripheral Expansion Unit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=461436538

There is much Intellivision stuff, a 2600 QBert cartridge, Oktoberfest
CDs, an antique wrought iron shoe anvil, and a ukelele too. Find them
here:

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPIcommand=ViewListedItems&userid=velcro-spy&include=0&since=28&sort=8&rows=25

My brother in law has one of the LinkSys firewall/hub units for their
cable-modem, its nice and tight. Last time I was down there, I hacked
at it from my work box and couldn't get a thing out of it. Not that
I'm a tcp/ip blackbelt, but none of the standard tools was able to
penetrate it- or do anything more than discover there was something
online at that address.

Hey, it is a lot more fun to read it in person as opposed to a copy on the
web. I am not saying that the website is not great, IT IS! but I can't take
my PC to read during class, I CAN take the magazine.

> >140 MB$(1)="":MB$(5700)="":MB$(2)=MB$

This is an old (and cool) hack to initialize a string. Or at least it looks like it. Usually it would be chr$(0), or some other preferred value. Its behavior is (as I recall) due to a bug in the Basic interpreter. I imagine it would wreak havoc with basic compilers unless they dealt with it as a special case.

> >150 MB$(1,9)=" ":FOR I=10 TO 19:MB$(I)="":NEXT I

The first statement on the line is trying to sett chars 1 thru 9 to spaces, the next is setting the 10th thru the 19th chars to ctrl D or chr$(4). You could replace the first with

for i=1 to 9:mb$(i)=" ":next i

> >
> >They both exist, but only $MB(1) works.
> >$MB(1,9) gives ('wrong dimension')
>
> I tried changin the declaration to DIM $MB(300, 19)

The declaration is for a single string of 300*19 (5700) bytes.

(all the above assumes I remember correctly- or that I understood it at the time.)

>"David Szotten" szotten@telia.com asks:

>I have this atari basic file that i need some help with.
>It's an array causing me troubble.

>Here is an extract from the file:
>>DIM MB$(300*19) mean

This line Dimmensions or declares a string of characters; ie: save 19*300 =
5700 bytes for a string variable named "MB$"

>>140 MB$(1)="":MB$(5700)="":MB$(2)=MB$

Line 140 assigns a null character value to MB$; it equates position 1 to null
and sets position 5700 to the same which establishes the length as 5700. Next
it sets position 2 to the value of the string beginning with position 1; 1 goes
into 2, 2 into 3, 3 into 4... complete to the end, ie: 5700. This sets the
length as 5700 and empties the space reserved.

>150 MB$(1,9)=" ":FOR I=10 TO 19:MB$(I)="":NEXT I

Line 150 defines MB$ positions 1 thru 9 as spaces and then places that
character between the quotes into positions 10 thru 19 with a FOR/NEXT Loop.

>>They both exist, but only $MB(1) works.
>>$MB(1,9) gives ('wrong dimension')

The dollar sign ($), by syntax, must be the final character of the variable
name as in "MB$". The expression, "MB$(1)" refers to the value of the variable
beginning with position 1 and continuing through its entire defined length. If
MB$ is unDIMmensioned of not defined, the "PRINT MB$(1)" will generate an
error. "MB$(1,9)" refers to positions 1 thru 9 and will error if MB$ = "Hello"
because the length is currently only defined as 5.

>I tried changin the declaration to DIM $MB(300, 19)
>and then $MB(1,9) worked, but not $MB(1), (also 'wrong dimension

I am a little confused here; DIM MB$(300, 19) should generate an error because
Atari Basic does not support string arrays, and DIM MB$(1,9) should do the
same. DIM MB$(1) should be a legal statement.

-Ron

I don't have a solution but I admire the problem.

6506. CCAG 2001!

ATTENTION RETROGAMERS, COMPUTER COLLECTORS, VIDEO GAME FANATICS!!!!

WE'RE BACK!!..

CCAG 2001
(Classic Computer and Gaming 2001)

If you like collecting old computers, video games, and enjoy using them
still, then come join us on:

June 23rd, 2001
9AM till 6PM

National Guard Armory
IT'S ON ROUTE 57!!!

(actual address)
3520 Grove Avenue
Lorain, Ohio 44055-2048
(On Route 57, going North of I-90/Route 2)

IT'S FREE!

Both vendors and attendees!
Computer User Groups and vendors inside, flea market outside!

5,000 square feet of indoor space and an additional 5,000 square feet of
outdoor space is available along with ample parking.

Setup: 22nd, June, 2001
6PM-10PM

Please Call Ahead for Reservations:

Jim W. Krych jwkrych@n2net.net
440-979-9295
Fred M. Horvat fmh@netzero.net
440-286-2566
And these other CCAG 2001 organizers:
Thomas J. McLaren sirthomas@uk2.net

Please visit this site:
http://tomheroes.com/ccag.htm

As of 10/12/2000
User Groups:
Erie PA Atari Group
TI Chips

Cleveland Classic Atari Group

Vendors:
Tomorrow's Heroes
Retropolis
Songbird Productions
Video Game Connection
Ramcharged Computers

People/Organizations:
Fred Wagaman
Alan Hewston
Thomas Mclaren
Andy Frueh
Tim Snider
Curt Vendel(Atari Historical Society)

We are looking to do a "Classic Game Experience" this year!
One room is going to be set up for playing classic computer and video game cartoons and commercials. The other room is going to be an emulator room- MAME, etc. We are hoping for some people with arcade systems to bring them.

See ya at the CCAG!

> Here is an extract from the file:
> >DIM MB$(300*19) mean

Your BASIC :) problem is that you have assumed the DIM statement refers
to an array--it refers to a string. Unlike MS BASIC and its variations
which allow string arrays, Atari BASIC does not, but it does allow
strings of up to 32767 characters in length. However _all_ strings must
be DIMensioned before use, there is no default length or dimension.

> >and what do these mean?
> >140 MB$(1)="":MB$(5700)="":MB$(2)=MB$

DIMensioning a string does not establish it with any value or length,
it merely reserves RAM for it. The above statement does the following
a. sets the first character in the string to nul;
b. sets the last character (300*19)th to nul and establishes the
string's actual length; and
c. exploits a quirk in Atari BASIC which causes the second through
last characters in the string to be set to the first character.

Since the desired character in this case is nul and assuming first
program run, the above could be replaced with:
140 MB$(5700)=CHR$(0) [chr$(0) could be replaced with "heart" where
"heart" is the character obtained via Control+Comma.

> >150 MB$(1,9)=" ":FOR I=10 TO 19:MB$(I)="":NEXT I

This statement does the following:
a. changes the first nine characters of MB$ from nul to space; and
b. changes the tenth through nineteenth characters to CHR$(4).

> >They both exist, but only $MB(1) works.
> >$MB(1,9) gives ('wrong dimension')

I'm not sure what you mean by the first statement; the second is
syntactically incorrect: it should read "MB$(1,9)" which, if you're used
to other BASICs means LEFT$(MB$,9).

> I tried changin the declaration to DIM $MB(300, 19)
> and then $MB(1,9) worked, but not $MB(1), (also 'wrong dimension'=

More syntax errors.

> Please answer to szotten@NOSPAM@hotmail.com

It is considered impolite to imply that you don't bother reading the news group to which you post a question. Therefore, I have replied only in this group.

Well,
looks like you have a patched (changed) version of AR. I know there are
several of them flying around in the Net. Some of them have been changed
to NOT/NEVER load the intro. Maybe they do not even contain the intro.
So, search for another version. I also found images that have the intro,
but which crash directly after the intro (bad hacking??) maybe thats why
someone removed the intro from loading... -Andreas

P.S. Originals are nice, especially AR The City, which comes with a
golden disk label... (whereas The Dungeon labels are b/w)

Well,
I do not know the accurate timing differences, but yes, there are. The
RAMs and Ramdisk are faster than on the older XL and XE computers. Look
at the built-in Selftest. It almost works twice as fast !! So, I guess,
thats why you have difficulties with your RD. Besides, someone told me,
the OS (or maybe the CPU) not only detects the 64k extra Ram (Ramdisk)
but is absolutely limited to 64k extra Ram. If you wanna install more
than 64k Ramdisk, you also have to install a new OS (or CPU - use one
from the older 130XE computers with 16 chips). I believe it was Erhard
Puetz who told me that... -Andreas

Well,
normally the sounds created with Chaos music composer (*.CMC),
Multi-Pro-Tracker (*.MPT), Theta-Music-Composer (*.TMC) and many other
polish sound editors generate object files. You can load them from DOS
with the binary load option. You can also use the Music-Player (version
2.0 is latest, but I prefer version 1.6) from MC Gyver to playback these
sounds. Sorry, I do not have more knowledge about that. But thorsten
karwoth explained in his (PD program) "Soundmon. Professional 2.1" how
its done. In german language of course, but there is an english
translation of the complete Soundmon. Prof. avaiable. I once sent this
translation to Nir Dary (hello!), maybe this can help. So call Nir, if
you know him, or hope he is reading this... -Andreas

>
Well,
I am not Mathy, but I do own a 65XE and a 800XE both made in China and
originally sold in east germany and other (former) eastern european
countries. Both XE`s have the ECI slot and a slightly changed Selftest;
this Selftest now shows only the avaiable keys, whereas the 1200XL
function keys have been removed. the memory test shows 48 small cursors
for RAM, 2 big stripes for the OS and 4 medium stripes for the 4
rambanks. the selftest is almost as twice as fast as normally. The board
for both the XE`s says "version 130XE"; it has space for 4 Ramchips (2
for RAM and 2 for Ramdisk). Atari just left the Ramdisk and Gate Array
space empty on it. So you have to buy two RAM/Ramdisk chips and get a
gate array chip somewhere and you have a 65XE and/or a 800XE with 128k
RAM. I have done this !!
Unfortunately the XE`s both have GTIA bugs (which appear as stripes in
GTIA modes), so you have to remove the faulty GTIA chip. Next, the tv
modulator also has a little bug, which shows a grainy and stripy
picture. But it can be easily solved. Read ABBUC magazine 61 or ask
Wolfgang Burger for the english article written by Jiri Bernasek (Czech
republic, eastern europe)... -Andreas

P.S.: Because of the slightly changed OS, there are some (protected)
games (disks, tapes and even carts !!) that will not work with these XE
computers.

Well,
thats not so correct. You know us europeans, don`t you ?!? We do have
some (formerly eastern european) Atari XE computers, that have a new and
slightly changed OS. There, the Selftest does not contain the 1200XL
function keys anymore. Besides, the XEGS also does not contain them.
(And most later programs use only cursor -=+* instead of CTRL + cursor;
so there is really no need in upgrading the keyboard on XL or older XE
computers with these 1200XL function keys.) -Andreas

If you have the time and the inclination you could try building a MAX232
version.

At least that would corner the problem a bit. Figure is the MAX doesn't work
then the problem has to be something other then the cable. Faulty pokey, IRQ
conflict in the PC, something like that anyway.

Well, then are all Atari Trackballs the same? I plugged mine into my
ST, and it worked fine as a mouse (I didn't have a right mouse button
though).

There was a 64K machine released in some parts of Europe that said
800XE on the cover (which is probably why we call it the 800XE =).
There are a few pictures of it on the internet, you can find one at:

http://atari-computer.de/gallerie/comp/800xe.htm

It's not much difference on the outside than the 65XE and 130XE though.

NEW
Atari 400/800/XL/XE Fonts for Newton
Three different variations of the Atari 8-bit font for the Newton.
Works on NewtOS 2.1 systems and should work on NewtOS 2.0 systems as well.
I have the creator of this font and the developer of the Newton font to
thank. Mark Simonson is the creator of the font, and webmaster of the site
"Mac/Atari Fusion", which is actually the inspiration for this site.
On the Newton side of things, I was so impressed by the font work I saw
at "Newton Connections" that I asked Ben if he could help me port over Mark's
truetype font. A day after permission was given by Mark, Ben had this font
completed! Well done!

6526. APE cable and APE software 850 emulation

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-13 00:00:00 UTC
From: Russg <russg@en.com>
Message-ID: <39e7b4a0$0$56642$6c569032@news.erinet.com>
Source record: 41244

I spent a better part of today trying to get my APE/SIO2PC
cable to work with my pc modem, thru APE software.
Previously, my 11 foot APE cable wouldn't do concurrent i/o
at all in APE.
I got a 14c89 and put that in. And now I could dial out and
do fairly well, but not satisfactory, APE kept automatically
going out of 850 emulation, and I had to keep forcing APE
into 850 emulation.
I decided my cable was too long and the adapters I had on it
weren't good, so I installed a slightly shorter 1/2 pc
serial cable, which had the needed female 9pin D connector
on the pc end.
Fired it up and it was worse than my the previous try with
just the 14c89.
The moral of the story:
I wish Steve Tucker would allow less than a 19.2k baud
setting for the A8 term program, that might help.
And didn't someone say that the 14(c)89 was supposed to
operate with a 12v supply, and the SIO only has 5v?
I dunno.

I don't want to start a discussion about piracy (yawn), but the problem is, that even if I bought the game, (are we talking about 50p here), I'd have no way of transferring it to use on an emulator. I used to own a huge collection of original atari 800 games, which I bought when the atari was still making some money from it, but times change, but I do think Atari have had their money out of me many times over. I loved my atari, but the point is, how can I buy a game legally and use it on emulator without buying an Atari computer. Do Atari sell a cd with their images on, in the same way the intellivision lives CD-ROM was sold, I think not! In my eyes the intellivision cd was well produced and worth buying, but nothing exists like this for the atari 800. I can assure if such a thing existed I'd buy it straight away.

I've actually found a copy now, so thanks anyway!

Ron,

I've had no joy getting an image of the disks that will be of any use to show how it works... I've tried sio2pc, ape dos & ape windows, all work fine with ss sd & normal ss dd ultra speed, just not with the disks I have fomatted on this menu system!.

I'm building a 1050 -> pc cable this weekend to try that instead I'll see what happens.

I'd like to back them up, the menu system is excellent, you get a choice on menu creation of font style & appearance etc then it creates the menu system. You can then transfer stuff on from multiload, multiboot, boot disk or cassette.

(Rick Cortese suggests the MAX232, two chip version of sio2pc.)
I looked at Clarence Dyson's page, which has stuff on the one and
two chip versions. The two chip version can either be with the MAX232
or the 14c89. You suggested the MAX232.
Do you think the MAX232 sio2pc will be better with a 9 foot cable?
My PC and A8 need about that much to connect. No room to set
a monitor near my PC so I could use a shorter cable very well.
Thanks for the suggestion. The two chip version is much more involved
than the one chip. About 6 resistors and about as many capacitors.
Russg

IMO: If you go for it, 1 chip MAX232 would be a good choice.

Just guessing, should be better if signal strength and voltage level are the problem. But I don't know that that is the problem of course. Carolynn's cable just had a broken wire inside the hood for example.

RS232 is supposed to be good for 25' cables, and the MAX232 will drive the cable a bit better.

Source record: 41169

(Rick C. suggests a 1 chip MAX232, Ken S. says maybe use a
MAX233.)
Rick. I haven't mentioned that my 14c89 works fine for disk drive
emulation. At 1x or 2x speed, (Haven't tried 3x speed). The old
1489 worked fine for drive emulation. So I don't think I have a busted
wire or IRQ conflict or other problem with my setup. It is just the
850 emulation that doesn't work right in APE. I definitely think
it is a signal/voltage level problem because of my long cable.
The one chip MAX232: I haven't seen this one at Dyson's site.
Where might I get a schematic for that one?
The MAX233 sounds like it would be even harder to find a schematic
for. I'm not able to do the thinking on these circuits, I can follow a
schematic tho.

Fairly common and should be fairly cheap. If you swap the 800 for an
XL/XE, you can use a ROM image in RAM in place of the cartridge.

A better bet is MAC/65. The cartridges are still fairly expensive but
the disk versions are available for free. Even though I have a MAC/65
cartridge, my preference was always to use the disk version with
SpartaDOS and a RAMdisk.

6548. Atari 1050 Disk Drives FS

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-15 00:00:00 UTC
From: af332@freenet.hamilton.on.ca
Message-ID: <8sd6mj$t13$1@mohawk.hwcn.org>
Source record: 41174

I still have a few Atari 1050 Disk drives for sale, which I am selling shipped to North Amercia for $30 US funds. Elsewhere in the world, the price is $20 US plus shipping from Canada.

In addition, I still have some Adaptec 4000a boards which I am also selling for $30 US shipped in North America. The Adaptec 4000a converts MFM drives to SCSI and operate with the Black Box and the MIO.

I am also selling 5.25 inch floppy disks in lots of 100 (USED) for $10 US plus shipping.

Atari 2600 dealers might be interested in a lot of 48 Atari 2600 carts,
Asteroids X 12
Star Raiders X 5
Combat X 6
Missle Command X 7
Yar's Revenge X 7
Pac Man X 3
E.T. X 4
Space Invaders X 4

at .75 Cents US each - ie $36 US plus shipping

Source record: 41157

There is also a MAX233 chip that is almost the same as the MAX232 chip
but doesn't require external capacitors. I would think the pinout would
be similiar but am not sure. Might be great for getting the part count
down.
(like to squeeze it into a hood) It usually runs just under $5 US versus
just
under $2 for the MAX232 but it is harder to find. You can probably find
pinouts for both on the web and compare.

Message-ID: <8sbe5b$s0c$2@sshuraac-i-1.production.compuserve.com>
Source record: 41159

Since you used both MB$ and $MB, I can only assume you meant MB$
all of the time, but fell into using another languages
convention.

If MB$(1,9)=" " didn't work with DIM MB$(300*19), but
MB$(1,9)=" " worked with DIM MB$(300,19), then you are
probably using a microsoft type Basic that assumes arrays when
(1,9) is used. MB$(1) won't work because you've declared an
array, so its definately NOT Atari Basic.

Using DIM MB$(300*19) requires the use of Left$, MID$, and Right$
to access substrings.

With Atari Basic, strings are one dimension, and uses (x,y) to
access substrings(1 character).

What Basic is it?

Message-ID: <39eb31ee$0$35392$53a6afc1@news.erinet.com>
Source record: 41182

(Rick mentions Nick Kennedy's distribution of the single chip MAX232
sio2pc interface.)
I looked at that. And Clarence Dyson's page on sio2pc interfaces.
And Rick Cortese's diagram.
I have difficulty reading these schematics. I have to hunt for things like
which way the diode goes (cathode to pin 8). And which kind of
capacitor is a -| |- or -| (- . I noticed Dyson's 14c89 diagram has
pin 13 tied low instead of Rick's tying high. And Dyson's has a 5.6k
resistor pin 14 to anode side of diode. I tried that resistor, it didn't
help.
I did have one question. Somewhere I read the decoupling capacitor
from 1489 pin 14 to ground needs to be 'near' pin 14. I have mine
with very long leads going there. Should I shorten the connection so
it is withing 1/4" of pin 14?

There are Atari True Type fonts that are included in the install of APE'98
(or whatever the newest one is). You can install APE copy the fonts and then
uninstall it and then copy them back to your font folder (in win95,98,NT).

The 48K 800 works just fine with a binary load copy of the Asmed cart; I started with that and a Basic cart image in '83 when they were like $45-50. You can even do the same on an emulator, but many times the trace and step features of Debug tend to freezr mine.

>How would I translate "MB$(x,y)" (and the other) into basic?<
Try the following: (I'm presuming that the above line is Atari Basic.)
So a specific example might be
MB$(10,18) which specifies the 10th through 18th bytes in the string MB$ (for a total of 9 bytes). In MS Q or Quick Basic, this would be
MID$(MB$,10,9) which specifies 9 characters in MB$, beginning at the 10th character.

Note that this would also be the same as
MID$(MB$,10,(18-10+1)) which shows a clearer relation to the Atari Basic example.
In special cases, you can also use LEFT$ and RIGHT$, but MID$ works for all cases. I am not sure that MS BASIC will accept an expression as in (18-10+1). I think that it will, but I did not test it.

```
You will find it difficult to translate Atari BASIC into QBASIC,
I think.
You probably wouldn't DIM MB$, as QBASIC allocates memory
for strings automatically.
MB$(x,y) on the Atari would be MID$(MB$,x,(y-x+1)) in QBASIC.
MID$ syntax is MID$(A$,start,length).
It would be better to understand what the program is doing and
code it yourself, rather than trying to follow A8 BASIC, I think.

There were actually 2 versions, Archiver/Editor 1.0, and Archiver 1.2.

The mod also involved making 2 or 3 solder trace cuts and 3 jumper wire
runs. I had the docs in my hands just last night, but damned if I know
where I put them...

Bingo! One of the major differences is that, even with the DIM statement, versions of BASIC for MS-DOS generally limit string length to 255 whereas Atari (and other offshoots of what was originally Shepherdson BASIC) allow long strings (up to 32767 in Atari BASIC) but do not support string arrays.

> Russg

The decoupling cap should be "fairly" close, but the location is more of practicality than electrical necessity, but in general, closer is better. The purpose is to provide a local current source when a nearby load suddenly draws more (or less) power- the cap either supplies or shorts the current spike, minimizing the magnitude of the current surge down the supply and ground lines. Current surges are easily induced into nearby circuitry, and can cause erratic switching of circuits that are comparing the voltages of inputs to the supply/ground lines. These caps are most often electrolytic and have fairly high values (> 2 microfarads). If the supply is high impedance (not much current delivery), a cap such as this is also a handy source of higher current (for a short interval).

Small value caps (fractional microfarads and lower) are frequently used because they pass fast signals better than the electrolytic. Fast current changes over time are more strongly radiated into nearby electronics. This is most often seen in higher impedance circuitry in conjunction with high frequency signals- neither of which is the case with this circuit.

When you see specs suggesting the caps be as close as possible to the device in question, its mostly small value caps used to keep high frequency signals outside a chip (a cap looks like a very low resistance to high frequencies)- effectively shorting them to ground rather than letting them into the chip. I imagine this kind of connection is also used when an external capacitor is forming part of some tuned element, the balance of the parts being inside the device. In this case, long leads add resistance (and inductance), detuning the circuit.

Actually though, these caps are forming RC filter networks with the components they connect to, revealing the AC nature of digital circuitry.

Russg has a point. QBasic is a whole different animal. They are both BASIC and do have similar commands but graphics and sound commands are totally different. For example, you would not PEEK or POKE in QBasic. Syntax is a lot different as seen above. I had a lot of problems when I was beginning with QBasic since I had learned on the A8 but I began to catch myself every time I typed a DIM string and corrected it. I found QBasic to be a lot more efficent than A8 BASIC but I still code with A8 out of love for the machine.

Is this person (of which we are all replying to) attempting to type in code from another source or coding his/her own program?

Somewhere on the net is a program to convert Daisy Dot II fonts to the
format needed by an Epson compatible printer.

Printer fonts varied in format, depending on whether the printer was in
draft or NLQ mode, but I think most used an 8x9 matrix; in NLQ mode, it was
2 8x9 matrices, printed with a minimal line advance between the two.

Check the docs for Daisy Dot II or III; I think there's some information on
how things work there.

Hope this helps,

David P.

Source record: 41261

Mike,

The 400's typically came with either 16K or 48K. The 400/800's did not have the self-test diagnostic. That only came out later in the XE's.

The easiest way to tell how much memory your 400 has is with a BASIC cartridge. With the cart installed, and here is where I am a little fuzzy, you can type in a command like "PRINT FRE(???)". It is a built-in BASIC PEEK command but I can't remember the address in parentheses. Help anyone?

Source record: 41262

Boot the 400 with an Atari Basic cart and nothing connected. Type PRINT FRE(0) and press return. Since your screen and BASIC take a little memory, it will show a number between 13,000 and 14,000 if you have 16K. It should be between 5,000 and 6,000 if you have 8K. Between 29,000 and 30,000 with 32K. And in spite of the pattern so far, between 37,000 and 38,000 if 48K. The last numbers reflect the fact that Basic overlays 8K of ram on the 48K machines when the cart in installed.

FA: Huge collection of Antic magazines

I have a huge collection of Antic magazines for auction. Many early, rare, and sought after issues are included. Some bound/hardcover volumes as well.

Prices range from cheap to reasonable. Will be adding more over the next few days..

The current auctions can be viewed at:

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=ateam999@hotmail.com&include=0&since=-1&sort=2&rows=50

Heck, I've gone from an 800 to an 800xl, 130xe, XEGS, 1200xl, back to an
800xl, and I still miss my nuclear-strike resistant 800... there's
something primal about it to me.

Ah, MULE for four... paradise...

Instead of loading a ROM image of what is a very limited assembler, why
not download MAC/65 from the UMich archive? The version released by fTE
when he bought out the ICD stuff was the last disk version and contains
most of the features of the cartridge except for DEBUG.

Aside from features such as macros, it's fast.

I remember a program/article on this in an Antic, early '84 or '85 sometime. It let you create fonts for downloading to either a Gemini 10X or Epson FX-80 printer, and (if I remember correctly) could create Atari Basic code to do the downloading. Some years later I revised the program to create/download fonts to a Star NX-1001, and that program was included on an Ol' Hackers Atari User Group (OHAUG) disk newsletter. I'm not sure now which one.

Downloading characters is very printer-dependent. The Gemini 10X, Epson FX-80, and Star NX-1001 all allowed the entire 96-character ASCII set to be replaced, but the Epson LX-800 I have will only allow downloaded characters with ASCII values between 58 and 63 (decimal). In addition, the grid size was different for each of these printers.

Okay, I have an Atari 400. I want to find out how much memory it has.

Is there a basic difference between the 8k and 16k models?

Or is there a memory test built in similar to the later XE's?

Any help appreciated.

Cheers

michael

6601. new kind of archive ring

Hi classic game lovers !
What do you think about a new kind of game archive ring for our 8 bit Ataris ?
I mean an archive sorted by companies, where you can find a picture of the original package and the game file (atr, xfd, com). You should also get some infos about the history of the company or some interesting stories related to the company.

This would give all collectors a better chance to make his collection complete.
Smaller archives divided to many people are less work for each single one.
We just need someone who coordinates the archive ring...

Tell me your opinion !

Bye,
- Mr. Bacardi -

P.S.: Have a look at my homepage to see how such archive could look like ;-)

Actually, the Atari 400 when first built, came with 8k, and soon after, 16k. It used a single 16k board that was the same as used in the Atari 800. Third party manufacturers made 32k boards, which could be plugged into either the 800 (which opened a slot for things like the bit 80 column board) or the 400 which since it only had one memory slot would bring it up to 32k memory. 48k Memory boards were manufactured to bring the 400 to 48k, but these required soldering a board on to the Atari 400 motherboard which connected 4 points.

Atari never sanctioned any memory upgrade for the Atari 400 and maintained that it was not upgradeable. So, any Atari you see that has more than 16k (you can tell it has 16 k by doing a fre(0) command in basic and getting 13,000 odd bytes free), is using Non Atari brand memory.

There is apparently a hack that allows you to add higher capacity memory chips to a standard 400/800 16k memory module, but I do not know for sure if it will work with both the 400 and 800. The hack was desinged for the "800".

Source record: 41274

Will,

Actually Atari made a factory authorized 48K upgrade kit for the Atari 400
and was only allowed to be done by the service center, it was not a resale
item and there is a whole form that needed to be filled out and sent back to
Atari with the CPU serial # and kit serial# so that if the system was ever
brought to another service center or sent back to Atari, they would have on
record that a factory upgrade kit was performed on the unit and the warantee
was not voided, also by the time it was released they ended up using 64K chips
on the board so its actually a 64K board, but the 400 can only address 48K of
it, it came with a little kit of wires that had to be soldering on the bottom
of the motherboard to bring all the necessary address lines to the slot.
I have a 1979 Atari 400/800 ad and its one of the very few advertising the
Atari 800 with 8K of ram, actually in as far as collectors are concerned the
Atari CX852 8K memory modules are quite hard to come by, so if you ever run
across any, keep them.

>What a shame; I think you are missing the joy of that 800 keyboard<

Yes, that is very true. I started with an 800, and I am currently (passively) looking for a good one, because of the keyboard, and I have a couple of items that will not work under a tranlator/alternate OS in an XL/XE.
And that's also why I think the hack is quite clever -- you can get the good keyboard and have room inside the case for lots of additions, including an IDE hard drive.

Hello thomas/Iain, Hows the Atari going, Keep the Atari faith, keep those Atari's humming brightly

Anyway Re: Hasbro Int. restructuring

Perhaps Whoeverr gets their mits on Atari, they will not made they same mistake as hasbro, and get Atari back in the business it knows best.... That is H/W not software

Afterall Atari's "Success" in software, is very miniscule, Atar isoft, atari interactive and the atari s/w label that atari had between 87-90 eventually were either wound up, or led to atari being bought out

Keeping the atari faith

No point. There is no way anything with Atari on it could compete with
Sony/Nintendo/Microsoft etc. The R&D costs in creating a contendor would
be a show stopper let alone the industry's attitude to Atari. Add in the
fact that for 90% of gamers, Atari is either unknown or vague memory from
twenty years ago. Finally, there isn't a single Atari employee left
anywhere in any shape or form so the machine could be anything but would
just have a badge on it you recognised. Atari were great but long gone.
Not even worth thinking about.

Oh, I don't know. It was people wanting access to Atari's library of
Arcade games that sold so many machines originally. The fact that they
then decide to start a porting frenzy long after most of the games' self
by date was the main reason for any failure combined with the endemic
'Atari or CBM' attitude of the day.

Hi Russ!

Well, I can only give you an adress in Germany - but maybe they can help you
as well, just give it a try and write them an english email! Have a look at:
http://atari-computer.de/abbuc/Javastart.htm

At the menu on the left click on "Baupl�ne" and then on "Bestellung XL/XE"
There you'll find an email-adress that may help you.

My best regards,

Carsten

Has anyone ever heard of an old 80 column monitor being "converted" to be used on Atari 8 bit computers? I'm just wondering if such a thing is even feasible or just a dumb idea altogether. I'm thinking about old mono PC monitors or something like that.

The old 80 column composite ones work of course.

The 9 pin ttl ones have problems. Bob Wooley did several hacks that allowed
you to use them, but most of them were beyond what an average person could
do so they never recieved wide spread usage.

There are single chip solutions like the LM1881 sync separator that could
get most of it done, but you still end up with a 40 column screen display
with only 3 level<?> black, green, bright green, for you screen.

Trying to get an embedded Scsi drive to work with the black box, is hit and miss. You have to be able to disable the parity, or modify your black box with a Pal chip. Newer Scsi drives tend to be huge as well.

If you want to use old mfm drives, the MIO and Black box have proven to work with the Adaptec 4000a and have format utils written.

I do have a 1 gig scsi drive that allows parity to be jumpered off working with my black box though....although, I cant see ever using the full storage of the drive....

atari only made the 400 8K or 16K. A 32K board could be put in,
instead of the 16K board but as far as I know. atari never made a 32K
board. 3rd party vendours did however. To go past 32k in the 400 A few
jumpers must be added from the cart port to the memory slot.

Retro is a niche interest that only appeals to people of a certain age. Find me a hardcore games player or anyone under 25 who is remotely interested in playing old games. Certainly not enough of a market to sell a console on. Look at the sales for the various Playstation retro titles. They are lowwww. Sega didn't even bother with volume 2 of their retro collections and v1 did nothing.

> Sega would have to be in trouble with the
> Dreamcast (cant get one in Australia as easily as N64
DC is doing stranegly well but it's very regional. It outsells the PS2 massivly in Japan and has increased it's sales in the US by 100% recently but it wasn't that high to begin with there. It's also tipped to be a hot seller in the UK this xmas due to the low number of PS2s around.

Rene de Bie wants to sell a RAMdisk too. His will be 100% Newell compatible.

I use the OS bit instead of the ANTIC bit.

The MEGARAM III is incompatible to everything that uses the PBI, since it uses $D600. That means NO BlackBox or MSC-IDE controller.

Not really. ST mice send raw mouse tick signals that have to be counted by
the host, whereas PS2 mice send position information directly.

So long,

Hello Melee/Raphael, hows the atari going, keep the faith and keep the atari's hummy

Re: testing xe mem thru self test
What planet do you guy's live on, show me a non xegs xe with the additional self test patch that you can get in anytown gb, and I'll eat my socks, the fact still remains that, it wasn't offically released on non xegs systems, as my standard 130xe only shows 48 sq's and 2 8k rom bars (64k), unless I am talking out of that thing we all sit on

Where did you get this 'standard' 130xe from

Also re:800xe, I did see a piccy of it on various w/s and also in atari user mag (database/uk), basically 130xe with an 800xe badge (not worth much), but a 65xe(em) that's another story

Keeping the atari hummy

Hello ron/mark e, hows the atari going, keep the faith and keep the atari hummy

Re: alpha load's and siopc

Alpha load menu's, otherwise known and c.elton, and also any d/d boot menu's (formerly reffered to as pirate menu's), like howfen/multiboot (john williams), Rob C (was not was on the st) superboot, turbo etc etc, they will not work on siopc or pc emulators because the menu's themselves recognise anything compat. with us doubler, so unless theres an siopc us doubler emu for pc... youv'e got no chance, as the menu's themselves have usdoubler code in the program, to sense if you are using a usd compat u'g, like lazer, hyperdrive, happy, duplicator, klone archiver/ super arch.. etc etc, that is why you'll find that d/d menus like the above will not load on 1050's of xf's with super speedy, mini speedy etc etc

good luck

The difference between a PC mouse and an ST mouse is that
led/detectors<switchs> rotational speed and direction are sent raw to an ST.
The IBM style mice typically have something like a PIC microcontroller
inside the mouse that does all the conversion and sends the data out as
RS232 1200 baud in a packed data format.

IMO: Can't be done w/o some serious hack.

Cheer's Carmel, makes sense what you said !

I've got an old Rob C menu creator disk, and have a s/d version of that running fine over the sio2pc, so I guess I could bite the bullet and convert everything over to that, and back it up that way, that's going to be one hell of a long job though!!, I'll have to have a think about my best plan of action, really just wanted to back everything up as is,

Is there no other way of imaging a disk, I'm not worried about emulation, just so when my old disk's eventualy fail I have a back up. how long before the old Atari floppies start to degrade anyone ?

> good luck

I'm going to need it! :-)

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

Not true, at least completely. I think the resurgance in retro gaming (I
hate that stinking term, it makes me feel old), would go along way to
marketing any new console's. Sega would have to be in trouble with the
Dreamcast (cant get one in Australia as easily as N64 or the Gaystation), so
if Sega can pull themselves and their crappy hardware up, Jag2 can't be a
bad thing..

Okay, hopefully someone knows this...

Does anyone know who composed the "Have You Played Atari Today?" ditty?

And on a less difficult note (groan), what's the name of that classical song
Atari used for a lot of their TV ads back in the 80s?

Hi,
I have a 1 gig seagate I play with on my bbox from time to time, I
also run it on my K-Products interface for some testing. I redid the
KPInterface for 512 byte sectors also. I was planning on doing an auto
parity feature but have not got that far so I set the parity jumper as
needed on that one. I also have a 4.3 gig Seagate SCSI drive in my PC
that has a parity jumper. I have also been toying with ideas to make
MYDOS do huge partitions too but want some feedback on that before I
write anything. I may even do a PC like Command.com to replace dup.sys
if people want it. Any thoughts welcome.

6645. A question for programmers

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-21 00:00:00 UTC
From: Richard Pike <RJPike@exton.freeserve.co.uk>
Message-ID: <8sse95$dv3$1@newsg1.svr.pol.co.uk>
Source record: 41115

I'm a novice when it comes to the Atari, but I've managed to set up a Player and draw it on the screen with assembler. Now I want to move it across the screen by writing the x coordinate into the appropriate horizontal player register something like this:

```
Do
INX
STX horizontal_register
Wait for screen refresh
Loop
```

What is the best way to implement the "wait" step so that each movement is synchronised with the screen update every 60th of a second? I've thought of adding an interrupt to a line of the Display List that writes a flag each frame, but this doesn't seem very elegant.

Thanks,

Richard

I would guess that the XEP80 runs at a little different frequency than the JAM can accept. The XEP80 does lower case descenders which runs something like an 8x10 character set. This makes for more lines per screen and a little different frequency spec than the NTSC a JAM expects.

Bob

The main problem with using an old TTL mono monitor is the loss of grey scales. Without hacking the monitor itself, you end up with only 4 levels of grey - you really need 8. It works OK on BASIC and EDASM type stuff, but AtariWriter and game stuff has missing pixels.

Other than that, it is pretty easy to do if you can do a little soldering.

You can do this in the Vertical Blank Interrupt without the Wait....
This VBI runs every screen cycle so you just insert your INX and STX
instruction into the existing code stream. Get a copy of "Mapping the Atari"
and take a look at page 42 (XL edition). Essentially, you plug the address
of your routine into location $0224 and end your code with a JMP $E462. Or
something like that. You have to be careful when you change $0224 that you
don't VBI half way thru...

Another thing that can be handy is to use a local memory location
(free for misc use and the address known to your VBI routine and
whatever main program you're using, basic, action, lisp- whatever).
The vbi routine simply reads this byte and stores it to the player
missile horizontal position byte. Then your program can adjust the
value as it pleases, and the player's position is updated the next
VBI. This is essentially forming a shadow register, you'll see quite a
few references to them as you get to know the Atari memory map.

I have a conversion device in my Apple II stuff that converted composite video to CGA or Monochrome TTL. My one overriding memory of this device is that it worked fine, but this puppy ran HOT! I put that one up in the garage with a clear resolution to fix it up with a fan before I ever ran it again! But it did put out a fine display. Also, the Apple Composite monitor would do a quite good 80 column display. It still had some artifacting, but was far more legible than most composite monitors. Still can't figure out why the XEP80 won't work with a JAM!!
Regards,
Larry

Yes, I've tried this trick with Display List interrupts. But if you're using an assembler routine to update the coordinates you still need a "wait" to make sure the objects are drawn before their coodinates change again. I found the simplest solution is to have a VBI that just sets a flag each frame, then a main loop like this:

```
Do
If flag=1
Update coordinates
flag=0
End if
Loop
```

Would that work ? I think the VBI is the thing to do. No need to do anything
but update the position and it waits until the beam is on the way up and
that wont give any flicker. the $D40A I use on my DLI's. If I don't use them
on the DLI, PRIOR to the one I need to update, the colors (for example)
would not start at the proper position and look jagged in the edges. I think
this address waits for the HORIZONTAL blank to occur.

I have the sources (PAL only, sorry) on :
http://home.online.no/~olavese/atari/a8dl.htm

They are written for AMAC.

Yeah, I recently set up my 8-bit in the den, after ages in the closet.
My wife has bugged me for years to either get rid of it or make some use
out of it; I don't think she really expected me to actually set it up
again. ;) It looks quite out of place, but so what? Damn thing is so
fun, even my wife got into it after a little coaxing (Ms Pac Man turned
the trick).

There is a program which allows for connecting NES, SNES, Genesis, PSX, etc. controllers to the parallel port. It is called SNESKEY and it makes the controller act as keypresses on the keyboard. If you hook up an Atari joystick using the Genesis wiring scheme it would work. You should find the website by searching for SNESKEY.

6662. Atari Happy Drive 1050

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-22 01:09:00 UTC
From: Chainsaw <buck17@mylinuxisp.com>
Message-ID: <sv4fhcjd1c7k3f@corp.supernews.com>
Source record: 41120

Hello-> I acquired a 1050 happy drive with software and warpdos. I initially had to replace the parking sensor due to burnt wires, it now formats,reads, and writes. It seems to pass all of the diagnostic tests on the software disk. The trouble is that when I use the happy backup program (copy any disks or sector trace) it will successfully copy the first pass. After the disk switch for the second pass it reports the remaining sectors as unreadable format. I've tried all of the options i.e. forced slow mode-skew alignment and sector by sector copy, I've also double checked density settings as well as sectors needed. Seems like when I swich disks it clears my settings even though the menu's report no changes. I'm hoping this is a user error <hee hee> Is there an easy way to check/adjust my head alignment? CAN ANYBODY HELP ME BEFORE I GO CRAZY?

This is true for simple asm routines, but sometimes the
routine, even hand optimized, can take longer than one
jiffy to execute. In that case shadow registers are
definately the way to go! Actually a combination of
your above code with a flag and a shadow routine is
probably best.

For simple stuff I would probably just hang the player INX,
STX routine off a DLI. It seems easier to me, Especially
if your just moving the player horizontally. Just choose a
scanline below (or above) your player (not in the middle of
it), and set the Interrupt bit. That way you can turn it on
or off with one store:

*SCANLINEDLI = DLISET;
*SCANLINEDLI = DLICLEAR;

Where DLISET is your original mode line with the DLI bit set
and DLICLEAR is your original mode line unchanged.
```

It saves unhooking the VBI vector when your done.

The buffering idea mentioned earlier (shadow registers) is really
useful if your assembly language routine takes some time.

Cheers,
Peter

Well here's a follow-up on the situation->
I reconfigured my setup and put the happy as drive #1 (the boot drive)
When I try to boot any disks out of an assortment it always gives me a
boot error. Now I'm 85% sure the heads out of alignment 'cause I can't
remember ever successfully copying any disks to it. Although when
starting the Happy backup program it did read the happy software disk to
get initialized- but it also wrote that disk. I think that was the only
successful backup I made with it.
Is head alignment done with by repositioning the parking sensor? That
was the first repair I made to the drive after receiving it.
I'm about to see how far the happy will fly out of my window!

You are SUPPOSED to be able to type things. Yes, my 800 is a little weird (gone the way of Franken 800 in some senses) but it should be responding to the keyboard at bootup.

6676. What kind of disks Does the 1050 Use?

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-23 00:00:00 UTC
From: Dan & Jeri Williams <dwilliams@milwaukeepc.com>
Message-ID: <39f3e25b$0$173$3936f1fe@news-core.twtelecom.net>
Source record: 41141

I am currently using only Double Density disks, what I was wondering is if the 1050 could format a High density disk for what it needs? And before you tell me, yes I know that it won't use the full capacity of a HD disk, I was just wondering since all I can really find are HD disks.

Thanks

Dan

I looked it up. Here it is:

Look at:

http://users.swing.be/atari/joystick.html

and try:

fernandes@agel.ucl.ac.be

His name is Emmanuel Fernandes (a real Belgian sounding name <g>). I hope
his email address still works. I can highly recommend the interface (and
the guy!)

>Yeah, I have one that CSS had upgraded and it has gone out twice, once before the enhancement, and again after.<

What failed? There are very few components in the XF551 compared to earlier drives. The mechanism is a low power unit (Mitsumi's, at least) More-or-less "encasing" the P/S section was likely a bad move. And the SIO sockets should be reinforced. The "crappy" circuit board is a frequently mentioned issue, but I wouldn't think cause any particular problem so long as one doesn't alter the traces.(?) What else is amiss?
P.S. I added an internal (Pentium) fan using an external supply. Don't know if that helps anything, but it does run still cooler.

Best try to find some used DD disks at a garage sale. HD disks do not
work correctly with the 1050 or the XF551; the magnetic characteristics
of the media are incompatible.

You can get away with using hard-sectored disks (the ones with multiple
timing holes) with a 1050 (but not a 551) so even old Apple 8-bit disks
can be reformatted.

If you do manage to pick up a pile of old disks, often zapping them
with a strong magnet before formatting makes the formatting easier.
I use an old Radio Shack cassette tape eraser for this.

I'm not sure I have all the Happy software available so I can't state
that your doing something wrong for certain, but I do know that the
Happy will always try to grab the first boot sector and store it into
internal memory whenever a disk is changed. Perhaps the format on the
second disk is not what the Happy is expecting? There might also be
a 'mode' that the Happy must be in to do the task at hand, one that
might kill the 'grab boot sector' thing and allow you to continue
without error. Re-read documentation?

If the Happy will read and write to other disks/drives then it should
be aligned well enough. Short of an oscilloscope and an alignment disk
that's how I determine if a drive is on track.

6684. Re: Atari Happy Drive 1050

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-23 04:45:11 UTC
From: Chainsaw <buck17@mylinuxisp.com>
Message-ID: <sv7gin2mq4851c@corp.supernews.com>
Source record: 41138

Thanks for the advice->

My docs are starting to get dog-eared from me reading them over and
over!
The drive does go into a mode-> when performing a happy backup the happy
software has to be read into the happy drive-> this initializes the
enhancement, but when I change disks to get sectors 14-39 or 40 it seems
to lose the enhancement or forget what it's doing. I almost always have
to use forced slow mode or it won't read the sectors properly on the
original. After I'm prompted to swap the disk for the second pass it
seems to slip back into fast mode (thus improperly reading the disk)- it
does this regardless of how many times I flip the slow switch on the
controller, and the software doesn't give me the opportunity to verify
my settings when going into the second pass. I have two disk drives (the
other is unhappy) and it seems kinda unnessecary to swap disks but the
program demands that I only use the happy drive. I probably wouldn't
have this problem if I had two happys 'cause there's a program on the
disk called multidrive- specifically for copying happy to happy. It will
lock up if I try it with an unhappy drive. Well thanks for the help!
Does anyone know if Happy computers is still in business?

It might serve, but given the lack of cpu cycles to burn in an Atari,
its better to not spend time waiting. And waiting for the next scan
line could cause trouble if multiple updates occur at different lines
down the display- nothing fatal, just potentially ugly. I think that
sync feature is often used for twiddling the screen color across
lines- ie; sync on the start of a line, set a color, count cycles, set
another color, etc...

From: Mark Keates <mark@mkeates.force9.co.uk>
Message-ID: <vsaJ5.5336$Ms3.205399@stones>
Source record: 41061

When using Player/Missiles, do you save any CPU clocks
by switching off Antic's data fetching and doing it directly
yourself (in a few DLIs)? The display I'm doing just contains
horizontal bars, so the data remains the same for a few lines,
the DLIs (6 in all) are there anyway to change the PM colours
and so the option to not use Antic DMA for players is there,
but only if I gain from it.

Thanks,

Mark.

At least it is fixable. Every chip is in a good quality socket. If a
screen comes up with a cursor, Sounds like antic and gtia are ok.
Would look at pokey first to replace.

Switching off the Antic PMG DMA will save you a few cycles. You can change the PMG Graphics (GRAFP0-GRAFP3 & GRAFM), Horizontal Location (HPOSP0-HPOSP3, HPOSM0-HPOSM3) and Colour (Forgot register names off top of my head) within a DLI. You must make sure that you store to the hardware registers and not the shadow locations.

Howdy Rich

>The 1.79 mHz is another story all together.

The only reason I want a scope is to check out my Atari's. So I need 1.79 MHz. Saw a small ad with one for DM 50 or approx. 20 US$. Hmm, I have that kind of money, but do I want the scope I can get for that amount.

What I was thinking is that most of the signal a scope measured are way to fast for the human eye and therefore have to be 'slowed down' (divided be... or something like it). So I was thinking that we could do the dividing/slowing up of the signal outside the Atari (that would be running the 'scope software') and just let the Atari display the picture and tell the 'scoping hardware' what it should do.

CU Mathy van Nisselroy

PS found a couple of ADC204'S yesterday. Along with 5 6522, some 6502's (standard, not Atari), 2 or 3 PIA's, two 6116 (RAM), three 62256 (32kB SRAM) and some other 'yet unknown' chips. Saved them from the recycling bin for under 2 bucks total. Hope they work.

>stories related to the company.

Not only to you, but to all who place Atari software on the net:

PLEASE PUT IT THERE IN ATARI READABLE FORM (too).

I hate having to convert ATR's and XFD's.
I guys use PC's because they are faster?
Well then why don't you let those with fast PC's do the conversion to ATR and
XFD and save us slow 8 bit users from waiting ages.

If the scope works you do. Even if you use it for nothing else, a scope
works perfectly as voltmeter. Actually it works better then a voltmeter
since it is several million times faster. I have friends that refuse to use
a DVM if they have a scope available.

You can check every fast single and see if it is going the expected range,
SIO for example. You also pick up things like voltage spikes that are much
to fast for a DVM to respond to.

what
> it should do.

If it works, they have trigger probes on them, variable delays, various
sweep rates. For instance, you can attach the trigger probe to the SIO data
line and repeated send the same character down the line. You don't have to
worry about exact timing because the sweep of the electron beam is started
when the first transistion of the SIO is made. You then adjust how fast the
beam moves across the CRT such that the entire data packet fits. Once again,
probably a good million to one ratio. You can have the electron beam take
anywhere from a full second to go across or times measured in nano seconds
to get the signal properly displayed.

PPS I have been looking really hard at Atmel micocontrollers. The one I have
been spending the most time with is the AT90S8515. It is a 8 bit RISC
processor that runs at 8 mHz and does 8 mips.

First point is they only use ~8 mamps, only cost ~$8, and there are free
schematics for using them with a 62256 SRAM.

Second point is I think I really like Atmel. The only problem with their
silicon is it is so popular now, you have problems getting your hands on it.
On their web site, they have a PDF file for interfacing the 8515 to an IBM
keyboard, which means fast turn around for doing things like an IBM keyboard
<=> Atari interface.

The have just announced a new 30 mips processor that includes ~36k SCRAM,
FLASH, and something like 40,000 cell FPGA. Prices in large lots are going to be ~$20
and I think they are giving away the tools on CD for working with this puppy
if you ask them right now. We probably have the same projects in mind for
what we *could* do with this thing.

These Atmel processors are really easy to program: Several packages
[assembler IDE, Basic, C] in the $0-$200 range, no parts interface and
powered from a printer port or few parts powered from a serial port.

Anyway, I am so convinced that the Atmel stuff will leave PIC in their dust
my next project is learning 8515 assembly programming. I also got to meet some Atmel
people at a trade show a few years back, great people.

If you want to see what some people are already doing with them them a good
place to start is www.dontronics.com and follow the web ring from there.
Hard to get me excited but I think I am excited about these developments.

800s are fun to fix. IF you have another that works.
You can swap out the memory cards. (If you have like 3 16k
cards, try taking two out.) You can swap the OS card out.
Once opened, you can swap the personality board out.
And if none of that works, you can start swapping the POKEY,
GTIA, ANTIC, CPU and some other socketed chips out.
So, probably you don't have a second one to work with.
Anyway, READY only comes up with it working and a BASIC
cart in.
If the power light comes on, your power is probably working.
Wait, ANTIC, CPU, GTIA are on the personality board I think.
You can take a known working main board and try plugging
in the different boards to locate the problem.
So, maybe get a second 800.

> or off with one store:

For simple horizontal movement I agree absolutely, but my aim is to get the player fully joystick controlled with up/down movement and perhaps even have some other players reacting to it! I still think a "wait" command in the main loop is the simplest solution. This doesn't waste processor time because it only waits if the main loop is executed in less than one frame.

Guessing but it will have at least 2 leads, one will be the ground. Not sure how they trigger it to start the electron beam. Heath did a lot of stuff with kits for TVs so I would imagine they have a built in triggered sweep. All you should have to do is get it so it is displaying a horizontal trace accross the tube. You then adjust the span/gain such that at 0.0V the line is on the bottom of the screen and say 5V is full scale at the top of the tube. If it doesn't have a scale on the screen, you could even use a grease pencil to do the marking.

The main thing you will notice is speed of response. Instead of waiting for a DVM to stablize, you get an instant indication of the voltage. I have seen people debugging using a scope and it looks like they are nodding their head in response to "Would you like a date with Meg Ryan?" question.

If it is one of the 'slow phosphor' types, all the better for catching spikes. Even w/o having it triggered properly, you will see something like

spike up here every once in a while
**************************** 5V logic level
Blurred area where the logic levels are changing, normal
****************************0V logic level
spike here every once in a while

http://www.qth.net/

Is a mailing list for hams, I would bet just about anything you could find someone there that could give you all the details. I didn't find anything in their archive, but some of it was even older, ref to circa 1948 scope kit for $39.

http://www.heathkit-museum.com/test/om-2.html

Was the only reference<3 on this page> I could find with specs. Seems like it may be a pretty good scope for knocking around since it sounds like you have a later model.

Yeah, I guess I have to find another 800 and experiment with swapping the various chips between them... sometimes I wonder if there even are any of these old computers out there, I never see them at thrift stores or places like that.

Don't do that!! Or at least throw it at my window. I remember reading somewhere that when using Happy software one had to close the door and then turn the drive on with the Happy disk in place. There was a stern warning to *not* do this with any other disk. To me this sounds like a method of loading the internal memory with special code that would then allow for the use of all the features of the Happy drive. I have never even tried to do what you are, but I do know that SpartaDOS will not work with a Happy drive normally. I would use only the WarpDOS the Happy came with, booting it as described above.

To test the drive for alignment, I would boot Mydos with your other drive first, then format and write DOS to a disk in the Happy and then try to boot with the Happy. If that works then try reading the disk in your other drive. You should be able to detect a problem very quickly that way. Since WarpDOS is a special Happy DOS that doesn't have many features, I have hardly used it all and I'm not even sure that I have all the Happy programs that there are. The documentation is very confusing at times and since I have no need to do the special copying allowed with the Happy, I remain blissfully ignorant of just how to proceed from here.

Are you sure its a Happy? There was a clone that was supposed to do all the things a Happy did, but didn't work. If it says Happy Computing on the add-on board then its the genuine thing. If you get really disgusted looking at your Happy, you can always send it to me!

Using HD disk in a 1050 is a hopeless quest, I can't get mine to even complete a format of one, let alone store any data of value on it. Don't bother looking in stores for DD disks, they were sold out years ago, you will have to go to 8-bit Atari vendors for those disks or if you want to spend the big money call the 3M diskette hotline 1-800-328-9438 and get their recommendations of vendors who by federal law, I'm told, MUST produce DD disks for years to come.

The latest chapter in the continuing saga of the UNHAPPY drive.....
After reconfiguring my setup and using the happy as the one and only drive, it wouldn't boot any disks- so after an hour of trial and error adjusting the parking sensor I got the track alignment perfect. It now will boot all of my disks, it's reading and writting just fine and it is definitely an original Happy Enhancement. I have the original software and docs- such as they are. Brand new these came with xeroxed documentation that was far from user friendly. I verified this in a vintage software piracy book I have 'Advanced Atari Software Protection Techniques'.
Yes when you perform a happy backup, you load the software disk in the drive and it programs the enhancement- the mod is actually a little computer in the drive- a 6502 cpu and 4k RAM. The backup process works okay but it does require a disk change after the first 13 or so sectors are read/written. I'm still having the problem that after the disk swap, it loses it's ability to read the original disk. It reports the rest of the sectors as unreadable format very quickly as if it has slipped back into fast read mode. I've double checked all of the preferences such as sectors needed and skew alignment, as well as forced slow mode. One thing I was surprised to learn is that happy drives cant read unstable sectors (fuzzy sectors) so any software written after 1985 wont fly!
Well I'm not gonna pitch it- it's still a novelty collector item. I just wanted to be able to backup the 100 or so original disks I have in my collection before they fail. Thanks again.

I looked at the link you had.
It was for an om-2. About like mine, but not as many knobs.
The one I have is an IO-30, not a 10-30.
It was bought 12/15/61 for $69.95 and a Basic Elect. Educational Kit
was bought at the same time for $19.95.
I noticed a link to Bill Wilkinson's Heath page. Apparently he worked
for Heath in about 1971.
It has a 5" green screen.
Thanks for the tips.
Now maybe I'll fire it up.
I did try to use it once to try to figure out infrared TV remote control
signals. It made a nice trace with up squares for the pattern the
remote was putting out.

Does anyone have a copy of the Happy Archiver/editor software for sale or trade? This is the software that came either seperately or combined with 'THE CHIP' enhancement for 810's. The last release of the software will also work with Happy enhanced 810's and 1050's. A companion manual would signifigantly increase my offer. Thanks again!

Don't forget David Lloyd too for his SID chip project ;-)

I'm currently using the CA65 assembler from it as it lets
you create object files that can then be linked using
LD65, taking away all of the hassles of resolving variable
addresses via import/export statements.

I highly recommend this for development!

> to an atr or whatever for the net?

Well, for one, if you have copy protected disks you need to 1) Punch Write-Protect tabs in them (with an inexpensive little tool that I believe is sold at most Atari vendors and 2) Crack the code on the disks. Obviously, #2 may be difficult but if you have programming experience it can be done

(I own
copies of several cracked games which were sold as blanks-The Goonies comes to mind)

> James B

Be careful with vertical movement within a VBI routine, you only have a few hundred cycles available. If you run over, the display will flicker. Generally the direct VBI (runs before the electron beam starts drawing) only has 80 or so instruction cycles, the deferred routine (runs after the screen is drawn) has > 150 or so. Since you have to move each byte of a player/missle in memory to achieve vertical movement, the cycle count can add up quickly. You might end up having to move part of the player/missle in one vbi pass and the rest in a subsequent one. That kind of thing can turn ugly. The realtime software engineer people frequently end up in this kind of bind, when they have an interrupt routine that absolutely, positively must run on time all the time- or they need some exact delay between one event and the next.

I agree though, vbi movement of PM's is great, just try to maximize efficiency and be prepared to face some gnarly issues if your movement routines take too much time to execute.

The cpu, antic and gtia are on the cpu board that is hidden inside the rf shield. a full dissemble is required to get at this board. Pokey and pia are on the main board as well as several glue chips. The personality board has the os rom on it contained in 2 rom chips. the third chip has the floating point routines.

I would have the joystick movement and the vertical/horzantle movement
in a vbi routine. Just check the joystick switches and move the player
if needed.
Moving the player in a vbi resultes in smooth movement.

Hi Mark,

> When using Player/Missiles, do you save any CPU clocks
> by switching off Antic's data fetching and doing it directly
> yourself (in a few DLIs)?

In principle yes. However, note that fetching PM graphics yourself by
means of the CPU costs overall more cycles than letting ANTIC to do
the job for you, at least if you have to poke new data into the PM
data registers every scan line.

> The display I'm doing just contains
> horizontal bars, so the data remains the same for a few lines,
> the DLIs (6 in all) are there anyway to change the PM colours
> and so the option to not use Antic DMA for players is there,
> but only if I gain from it.

It gains a bit, sure. ANTIC has to read the data from RAM and hence
has to lock up the bus.

So long,
Thomas

This is all really good stuff, but I was thinking in terms of the Atmel processors being so strong they could be used as a coprocessor. There is even a guy in Italy that has written an asm language program that only requires something like 2 bits of a port and 2 resistors to interface the micro to a tv set.

Also just read a post where someone said ~inside information is the Atmel processor cores<8 mHz> will run up to 20 mHz. They derate them because the on chip eeprom will not work right at those speeds.

There's a lot of nice instructions in the Atmel, things like harware multiply IIRC. At 8 mips, it probably means you could put one in an Atari and do everything from keyboard interface to floating point calculations.

With the new one coming out with 30 mips and 40k FPGA, it looks like you could do GTIA and Pokey work alikes in the FPGA. Anyway, my first project on the Atmel will be writing a 6502 emulator. If you do the standard; emulation requires 5X the processor of the target, then the Atmel at 30 mips is about 300X as fast as a 6502. Even the existing ones 4-8 mHz would be an order of magnitude faster then a 6502.

That's the plan anyway. 6502 emulator on an 8 mHz AT80S8515. Atmel gets their 30 mHz RISC<same instruction set> + programable logic device on the market. I learn how to use their design tools and see if I can do stuff like put a tv interface and sound into the FPGA. Could be I am to old for this, kind of thing for the young.

6739. pOSTING AN ARCHIVE OF DISKS

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-25 07:26:11 UTC
From: buck17@mylinuxisp.com
Message-ID: <svcqo0bt18is65@corp.supernews.com>

I have a nice collection of original and duped atari 8 bit disks- I'd love to archive them on the net! Most are copy protected though and even with a happy drive I haven't been able to reproduce them. How would I convert these disks to an atr or whatever for the net?

> Be careful with vertical movement within a VBI routine, you only have
> a few hundred cycles available.

No, I'm sorry, that's not true. The VBI isn't time critical at all. It is
more like thousands of cycles than a few hundred, and even then there's nothing
to worry about.

> If you run over, the display will flicker.

No, why? ANTIC loads the DL start address itself, all the system VBI does
is to poke the shadow registers back into the hardware registers, plus the
timer management and the clock.

However, one problem is IO activity and VBI, where the CPU really requires
a lot of cycles for handling the serial port. Therefore, a VBI should be
almost always be a deferred VBI, unless it MUST be active even when the
CRITICIO flag is set.

> Generally the direct VBI (runs before the electron beam
> starts drawing) only has 80 or so instruction cycles, the deferred
> routine (runs after the screen is drawn) has > 150 or so.

Ehem. (-: The immedate VBI routine is what the Os jumps at as soon as it
gets the VBI interrupt from ANTIC. This is usually the Os routine, but
you may place another one here, provided you jump back into the Os when
you're done. Immediate VBIs should be kept short, but the main reason is not
due to display synchronization, which isn't that critical. The problem is
that the VBI has a higher priority than the IRQ used by Pokey for serial
IO and will lock-up IO transfers.
The deferred VBI is called by the OS VBI handler when it is done, and when
the CRITICIO flag is clear. Hence, all shadow registers are poked in,
and the CPU power is not really required. You may enlarge the VBI routine
as much as you wish provided you end it *before* the next VBI comes in.
It may even end way way down below the display, there's no problem with this.

In fact, some games are even written by means of a huge VBI routine which
handles all the movements - simply because this is the easiest way to
synchronize with the display refresh. And these routines are surely larger
than a few hundred cylces. (-;

> Since you
> have to move each byte of a player/missle in memory to achieve
> vertical movement, the cycle count can add up quickly. You might end
> up having to move part of the player/missle in one vbi pass and the

> realtime software engineer people frequently end up in this kind of
> bind, when they have an interrupt routine that absolutely, positively

> must run on time all the time- or they need some exact delay between
> one event and the next.

One of the tricks to avoid this situation - even though you can easely
move all four players and all four missles in one VBI, no big deal - is
to have a DLI at the end of the display which sets a flag that is polled
in the VBI and which is used to bail out quickly. Some "stack magic" could
be used as well if you're tough. (-;

> I agree though, vbi movement of PM's is great, just try to maximize
> efficiency and be prepared to face some gnarly issues if your movement
> routines take too much time to execute.

It won't, believe me. (-; The VBI is really nice and not critical at all.

I guess the atari's have the equivalent of the windows blue screen...
I've got an 800XL -> gives nothing but a black screen and an atari vcs 2600
same thing. Any ideas? I had another 2600 that would only do black and white
and on tinkering with it I found a RF tuner on the board- tuned it right back
to color! I don't think that's the case with these two units though. I've
tried different cartridges with no help. Thanks...

What would be nice is to have a GTIA with 80 x 50 text and 640 by 480 graphics
in atleast 256 colors.

And since I'm dreaming anyway, I'd also like to have a SIO-Network-hub-kinda
thing, where you plug up to 8 computers via SIO into this device and use one or
two connectors for the periferals (Disk Drives, etc.). Each computer would be
able (after loading a small utility) to take control over other computers for
the purpose of exchanging information (either 'GAMELINK' stuff or pull data of
a harddisk connected to one of the computers). If possible, there should be a
way to do two things at once (like computer 1 exchanges data with number 2
while numer 3 is loading stuff from disk.

Howdy folks

I've got the impression that there are a lot more 80 column upgrades (commercially available (at one point) and home built) for the C64 then the Atari 8 bit. I found a old German magazin I have and it has a test of C64 80column upgrades. There were at least 4 of them and they didn't even mention the Batteries Included thingie.

How good are these upgrades?
(I found a 6545 at the recycle center. Saved it and a lot of other 65xx chips from the scrapheap. Looked like they came from Commodore's)

Are schematics available.

Hello there Mark/Melee hows the atari going, keep the atari faith the keep those atari's humming brightly

Re:US alpha load... again (boring, and I didn't like that menu, I prefered howfendos)

If you are going to go down the robc route, make sure that the disk is either single dens., or true double density (not usd/happy formatted), I'm not too sure about 1050 enhanced density as I havent seen an atr image in 1050 density used on an emulator (PC)

I would suggest that you use (if you have it) howfendos vers.3.7 or 3.8, which allow you to convert from robc ian k, john w (multiboot) prev. howfendos and us alpha (aka c-elton) to howfendos

Howfendos is the only menu that i know that allows you to foirmat in true d/d, and also all the other densities, also it's thew only menu system compatable with the german 1050 u/g for 1050 called mini & super speedy, mini & super speedy was basically a european version of happy/lazer

Hope this helps

Source record: 41016

Howdy folks

I've checked out my 800XE and have found out that it's more like the XEGS and less like the other XE's and the XL's then I thought.

On the XL's, the 130XE and the American 65XE (not sure about the last one, but I guess it's like the 130XE) Phi 0 (zero) leaves the ANTIC from pin 34. It's than buffered by the LS08 and enters SALLY (the CPU) at pin 37. Inside SALLY Phi 1 and Phi 2 are created from Phi 0. Phi 2 leaves SALLY at pin 39 and pulled up before it is buffered by the LS08 again. Than it enters ANTIC again at pin 29.

The GTIA chip select signal goes strait from the LS138 pin 15 to GTIA pin 32.

On the XEGS, the 800XE and the European 65XE, Phi 0 is not buffered by the LS08. The Phi 2 stuff is the same. But the GTIA select signal is now buffered between pin 15 of the LS138 and pin 32 of the GTIA.

What this means, I think, is that Phi 2 is moved forward in time by approximately 10 miliseconds and the GTIA is selected approximately 10 miliseconds later.

Could this have an effect on the Atari??? Could there be a reason for this???

Still doesn't explain why my memory upgrade works on the XEGS but not on the 800XE. :-((BTW it works on the 800XL too). One difference between the upgraded XEGS and the upgraded 800XE is that I use the empty places on the 800XE's motherboard. The 800XE and the European 65XE have motherboards that are made to be 130XE motherboards. With jumpers and empty holes where the CO25953 and the extra RAMs in the 130XE would be.

CU Mathy van Nisselroy

BTW these 800XE's and European 65XE's use 64 by 4 bit RAM chips instead of 64 by 1 chips. Although I have seem an 800XE with eight 64 by 1 bit chips.

Bob Wooley used a 6545 in his upgrade. IIRC it has additional registers over the 6845 that allow for easier access to video RAM. You can do things like load some registers as a pointer to video RAM/text position and then write to a register and that character is automatically transfered to video RAM/screen.

Always check the power supplies first. The 800XL power supplies are notorious for burning out. They don't always just quit like a good little power supply should, sometimes they go under voltage and start producing odd results.

Cheers Carmel, I've actually had some success with the Alpha load last night, Steve Tucker(ape, top bloke!) managed to update an ATR file I managed to copy & send him so it worked ok under ape, which means I can get them all backed up on my PC hooray !!. After I've done that I'll have a look at other menu arrangements that are more compatable with everything. If I can work out what mod's he's made to the file I'll post them here. I've never head of howfendos, I'll have a look around for it sounds ideal. I've got a d/d joystick controlled dos menu called microdos xl on some of my disks ?, could that be a variation on a theme ?

I've just started doing the wire wrap for a 8515. I really suck at starting new languages or programming right now, the "old" thing. Actually I am doing the wire wrap w/o even having an 8515 in my hot little hands, most places I hang out are sold out of them.

Plan calls for ~14 mHz clock divided by 2 for the processor and feeding a 74LS166 parallel to serial converter.

You need 14 mHz to get 640 dots on the screen during the horizontal trace => 80 columns.

I have a few latching schemes in mind for color info, but haven't figured out how to effectively get more then one color register that is active at any one time.

I have to check the data sheets, but Atmel RISC processors have a built in serial port and I think some have 2. I think they have a some of the common fast serial interfaces like SPI available.

It looks like what happened was Atmel started making 8051<~similar to the one we have in an XF551> clones, then went nuts and did a RISC version with Harvard architecture. They have the ~same pinouts as the 8031/8051 etcetera microcontrollers. They make several version of the 8051 compatible processor in CMOS that run up to 24 mHz, but they aren't as interesting to me as the RISC based ones.

I havve Phantasie II for the 8bit. It is quite ambitious technically
for an 8bit game, with multiple characters and scrolling maps and
graphical battles. I played it maybe 3 times a few months ago, but
then a disk crashed! I haven't been able to generate a working new
diskette from a Phantasie disk image yet.

The downside of Phantasie II is the disk access which could be faster
and better, at least that was my first impression.

You need to use the PROsys from Steven Tucker of APE. It's a cable
with electronics plus some software that will read even protected
stuff into ATR format.

Only one niggle with it (sorry Steve) is that emulators cannot use the
images made unlike other ATR's. Not a problem if you use APE and a
real Atari but not so hot if you have old real disks but don't have
either space or ability to have an old Atari hardware wise so
emulators become the only easy way to relive the memories.

Hello again mark/melee, keeping that atari hummy i see

Re: US Alpha Load

Well done my man, how the help did stephen tucker get around the us alpha load recogmnising the us d format, or did he just mimic the usd format and make it t/d/d (true /d/d)

Also re: microdos xl, why are you still using dos based menu systems (as they can only load dos binary files (I've got loads that i've created myself, incl. rockford/mastertronic, KDSM/cognito, zybex/zepplin, redmax/code masters etc etc, Although |I have a problem with GPS (grand prix sim by codemasters- which looks a bit like the atari arcade game championship supersprint) the small problemette is that I dont know where the last sector of the game loads in memory, as the tape loader only indicates 4 load blocks after the loader, where infact theres five, which is 1x 128 byte block on it's own, I just don't know where it loads in Ram, any help, and I'll give you a copy of the finished binary file, or anyone who can help

I prefer howfen/rob c type menu's because you very rarely have memory conflicts, like you do with dos menus, and with howfewndos you have 1030 sectors left for the files in 1050 dens, 714 in 810 dens, cant remember what it was for d/dens, rob c gives you 4 sectors less then the total no of sectors allowed on a 1050 810 format so that will be 1036 (1050), or 716 (810), mind you with robc it's basically a colour version of john w (multiboot) which I dont like anyway, and any m/bt or rob c stuff I have, I convert straight away to howfendos

Happy atari'ng

>Rest in Peace, Closer to Home.

Well, tzo.com is a dynamic DNS routing service, so no response from
the cth subdomain may simply mean that the site hosting CTH is down
for repairs or something. At least, we can HOPE that's the case and
CTH will rise again. (Yes, I'm grasping at straws... it'd be a damn
shame to see it go. The BBS was a real trip down memory lane, and I
enjoyed talking with the SysOp; we both knew a lot of the same old
folks from way back) Perhaps my only consolation is that I mirrored
his FTP site some months back... I was planning on updating the mirror
at some point. *sigh*

Hi Dan,

> I am currently using only Double Density
> disks, what I was wondering is if the 1050
> could format a High density disk for what
> it needs?

I did these 2 things, so I know it'll work:

1. www.myatari.com - 10 count=$2.95
They worked with me and Paypal, so they're
not all bad. ;) (Also, plenty of game dupes.
If you buy some you'll see what I mean.)

2. I went digging online. I found some
Verbatim MD/2D disks for $4.99. They weren't
formatted, but they do have the little hub
ring that makes the difference. I formatted
them and they work great. You can find them
here:

This sounds more likely, indeed. (-;

>> > If you run over, the display will flicker.

> If you run over on a Display List interrupt, the display will flicker or screw
> up....

It will just interrupt the VBI, no problem, all provided the VBI or DLI
will return before the next interrupt of the same kind occurs. The 6502 will
push return addresses onto the stack recursively. Provided you can make sure
that you never run out of stack, then there's no problem even with that.

Yes, I did this once... A huge VBI that took about half the display to finish,
which is interrupted by DLIs to modify the display on the fly.

So long,
Thomas

looking up de re atari, 2,000 for immediate and about 20,000 for
defered. This is for NTSC. PAL systems will have more cycles to play
with. Many of the 20,000 are while the screen is drawn.
>
> >
> >
> > > If you run over, the display will flicker.

The DLI will run as normal It is just another interupt routine that
will interupt the vbi and run.

The best 80 column upgrade for the C64 is called C128. Supported by
quite some software for C64 mode. It doesn't really make sense to use
any of the external 80 column cartridges. It also offers high resolution
graphics, color, up to 64k of video memory, ...

Ahhh, The Wooley Paradox!

I have seen some of the plug in boards IIRC what they do is add a phase locked loop tied to one of the CPU signals like Phase 2 clock to multiply the the signal up to ~14 MHz for the dot clock. I think you would need to do this on any plug in board, it just requires 2 ICs ~4046<?> and a divide by N counter.

I am pretty sure you could just do it using the Cartridge Control Line and map it into the $D5xx region.

You might check out-

http://members.nbci.com/cc65foratari/

There are A8 and MS-DOS versions you can download. Also note that these versions of CC65 still function as JRD originally designed them to. ie- They allow forward referencing without header files and the assembler (or is it the linker?) uses three passes for a more thorough symbol resolution. There are also some updated lib files in the ARCs/ZIPs that have some minor bugs fixed.

Well,
ABBUC (Wolfgang Burger) still has hundreds of XEP80 devices left. So why
should we bother about CBM 80column upgrades. Besides, there is really
not much software for such a device. (But there is some amount of
software that will not run with such a device installed; i.e. games
mostly do not like 80 columns...) -Andreas

Hello Carmel,
you have a converter program that converts disk files directly to Howfen
?!? Well, I merely own Howfen DOS itself and it only converts tapes.
Thus I would have to download anything from disk (DOS 2 format) to tape
and then upload it from tape to Howfen DOS. Not the way I like it. So do
you have a disk2howfen converter ??? Would like to see it... -Andreas

6784. 1050 TRANSFER HELP!

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-27 19:47:18 UTC
From: Craig Allen <CAA1@caa1.freeserve.co.uk>
Message-ID: <8tcm3f$s6j$1@newsg2.svr.pol.co.uk>
Source record: 40903

Could anybody please tell me what software I require to transfer games from tape (xc12) to disk (1050) and if possible where I could get a copy.

any help appreciated.

Regards

Craig (U.K.)

6785. Re: Hasbro restructuring - Interactive games div to be sold?

On Mon, 16 Oct 2000 18:29:00 GMT, ilaskeyremoveme@cix.co.uk (Iain Laskey) drooled an embarassing wet spot in his lap as he typed:

>Hasbro are reported to be looking at strategic alternatives after finding
>lower than expected revenues from their interactive games division. They
>confirmed they are restructuring but wouldn't confirm if they are selling
>off their interactive games division despite this being rumoured elsewhere
>in the industry.
>
>Time for Atari to change hands again?
>
>Iain

Yep. I've heard speculation that a likely bidder for the venerable Fuji is none other than (ack!) Microsoft. It's speculation, but based on some truth: Microsoft recognizes the popularity of retro-gaming, as evidenced in their Microsoft Arcade series. With ownership of Atari and all its properties it could go one better and maybe do what Hasbro's been doing -- except (hopefully) do a much better job than Hasbro has done.

I do hope that doesn't happen, tho...

Anyone happen to have $5 mil lying around?

Several utilities exist; can you transfer from PC to 1050?

-Ron

I don't have a solution but I admire the problem.

Hello, what I've used is Diskey Disk Editor, it was published by Adventure International. The only drawback is that it can only do single stage load programs- which are the older smaller ones (i.e. stellar lander, moon patrol, etc.). Hope this helps- I'd make a copy for you but it's copy protected and I'm still working on that.

Hello andreas, how is atari and germany today, keppy the atari faith,
and keep your atari hummy

Re: US alpha load1: I created the binary files from the original howfen
multipart files by looking at the games loader proper, IE on a single
howfen formatted disk with no menu (created with the howfen tape to
bootdisk utility) the 1st sector of the game loader proper is the forth
sector on a normal howfen boot, and its just a case of sieving the
revelant sectors thru a dissasembler, I used to use my built in
omnimon/ultimon (when I originally created the files) on my 130xe,
finding out how much code was loaded in what parts of memory, either by
using the cassette (iocb) locations or the Disk/casette (dcb) locations,
and making sure that the data that was loaded, corresponded to the data
on the disk.. There are exceptions to this rule like bounty bob s/b,
warhawk/ international karate, op.blood etc.etc, where once the program
loads into memory, it modifies the data/encrypts it, so the only way of
copying it is by dumping ram to disk (which on some programs... op.blood
and bounty bob s/b examples of this, still will not work), anyway once
you know where everything loads in ram, and you know roughly the start
sector and amount of sectors (and you know where the data/proggie
runs/init's) all you need is a dos (I use superdos as you can load upto
250 sectors, without problems) If your built in m/l monitor etc allows
intell. switching betw. dos and the monitor editor, all you do is find
the first piece of free mem after your dos (i use 3850h on superdos, and
load the required amount of sectors, using the monitor read sector to
mem command, however if the load block exceeds 32k (255 sectors- or 250
sectors) I usually to an even split and create 2 binary files, making
sure the you edit the binary header, to make sure that the data loads in
the right area of ram.. ie zybex has 2 blocks, a loader, which also
contains some code for the game proper, and the main block of b600h
bytes, which you would split into 2 files, making sure that the second
file had the run/init addr., and because of the way zybex works you'll
need the 19h sector loader, as the data from 600h to I think 0fffh (it's
ages since i orig converted the file to binary) then gets transferred to
high memory (page c0xx and higher), making sure you know where the bank
switch routine inits (forget looking for jsr's and jmp's, I use bne's
(their easier), if you have binary files you wish to convert to howfen,
all you do is get a routine or utility to convert the file to boot tape
(I wouldnt bother using a dos to boot tape utility on the jon c turbo
menu- it's crap, or the dos to boot menu- it only handles files upto 256
sectors, so once you have got you dos/boot tape routine or utility, to
test weather the boot tape works, on the full version of howfendos v3.7
and 3.8, you have a utility called, howfen tape to disk, whcih will take
a standard single or multipart tape and convert it over and create a

howfen boot disk, when you've created your howfen boot disk, load it up, if it loads and all is well, and it run's ok, just reload the howfen dos 3.7 menu util, get an unused disk, and follow the menu options to create a new menu, once you have your new menu, get the newly created howfen boot disk that you made, and follow the menu options for the disk to menu, and you will have the program on the menu, alternately if the howfen boot disk didnt run properly,load up the howfen dos 3.7 utility and create your new menu disk, then with the boot tape you recently created, follow the options for cassette to menu, Sorry about that

Also re Superspeedy and d/d menu's, superspeedy will only load/read menus in single density, 1050 density or true double, if you have a howfen or robc, iank alpha/elton turbo etc etc. menu formatted using usdoubler option it will not load on a super speedy as I remember, because superspeedy isn't usdoubler compatable, and thus will not load usdoubler menu's... according to h peters and derek fern, and my own experience

Happy Atari'ng

hi yah melee/mark hows the atari going, keep atari hummy, that's what i say

re:quirky mem on 130xe

I can only guess that the 800xe was basically there 800xlf, which atari
neglected to release, although I have seen a motherboard of an 800xlf with my
own eyes, Unfortunately the bloke who had had it, got shot of it when he sold
his atari gear to some bloke in manchester (UK- Crap northern city), so the
800xe is the xlf in an xe's casing i guess... Perhaps Curt vendel could put a
new slant on this

Also Re: quirky mem on 130xe, I will only eat my socks If someone somewhere in
the world or in GB (within commutable distance of london that is) can physically
show me a UK or even European non xegs xe system that has the patch in the self
test that shows up the additional mem on a standard 130xe, you can have my socks
if you want them, they're a bit christian you know (they go to church... geddit)

I also sent this by E male... geddit

reply in the normal fash...

Hello there atarifreaks, keeping the atari hummy i see, keep the atari faith

Re: Have you played atari today

That was advertising copy for either pos (point of sale) or insertion into advrt'g print media.. I think it was promoting the vcs (now called 2600), and had a piccy of defender (me thinks)

The Only Atari ad I ever saw on telly, and I live in London (Atari capital of the universe... forget sunnyvale c.a) was the ad for the 520 st (the one where the artist is painting on canvas), I also remenmber the numerous trailers that atari were pumping out at the various UK-pcw shows of the mid 80's, like the fun is back (2600), and Atari is back, and something promoting the xegs as an advanced game system ?!!! (the one showing the cart. version of rescue of fractulas (the intro screen, presumably copied from english software's mediator.. very similar) and also GATO, spectrum hollowbyte (now part of hasbro)

I update my catalogs once a week. Just before this message is posted.
So when you see a new posting, check my Catalogs for NEW Atari stuff!!

e-mail: atari@benjamin.net

I've added more and will be adding more Hardware, Software, Books and
Accessories for Classic 8 Bit and Atari ST. Plus I've just branched out
into Atari Jaguar Hardware & Games. So check out what's new on my Web
Site. I have 8 different Catalogs, & my SoftWare Catalogs are largest.
They have the biggest Byte Count. Boy! You should see my inventory! I
have Libraries of Books and Reference Material, TruckLoads of HardWare
and Crates and Crates of Software for the Classic Atari 8 Bit, Atari 64
Bit Jaguar Game Machine and the Atari ST and Newer Computer Line!

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari
64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories!
View Atari Catalogs on the Web at http://www.atari.benjamin.net & Jump
to my FTP site linked to my WebSite so you can Download Free Catalogs
or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's not an inconvenience. I do ask that you specify
Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you
by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can
attach text files to your E-Mail. Catalogs are just regular ASCII text
files so you can download them into your text editor & view them, edit
them or print them out! It would make things easier for me if you take
my Catalogs, load them into your text editor, delete what you don't
want to order and E-Mail me the rest of what you do want to order! To
expedite things, include your complete Mailing address so I can figure
Shipping/Postage and Handling. I'll be back after the weekend.

And remember, if you can't come see me today, come see me tomorrow! :-)

Please Direct all Replies Through E-Mail to: bensmith@teleport.com or
atari@benjamin.net. If you cant reach me at benjamin.net see my E-Mail/
Web info in my Signature attached to the bottom of any of my messages!

Or get %20 off List Price when you Buy *FIVE* or more Game Titles OR any other +NEW in the BOX SoftWare (MORE than Just GAMES!)! This +NEW in the BOX SALE includes all +NEW in BOX SOFTWARE! Not Just Games! To find NEW Items, search my Catalogs/Text files for the text "+NEW in BOX" or sometimes "+NEW in BAG"! While your Looking, check out my +NEW in BOX HardWare as well as some not so new HardWare, SoftWare, Books & Accessories for Your Classic Atari 8 Bit Computer, 64 Bit Atari Jaguar Game Machine and the Atari ST and Newer Computer Line! Act fast! Sale ends without !WARNING! To take advantage of my Insanity! (I'm a Manic Depressive)! Thank You for Laughing at my emotional scars! Get New Catalogs, Request them in E-Mail or Download from my WebSite! So for my Free Atari catalogs read on!

e-mail: atari@benjamin.net

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari 64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net & Jump to my FTP site linked to my WebSite so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor & view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want to order and E-Mail me the rest of what you do want to order! To expedite things, include your complete Mailing address so I can figure Shipping/Postage and Handling. I'll be back after the weekend.

So if you don't come see me, I can't save you any money! ;-(

Please Direct all Replies Through E-Mail to: bensmith@teleport.com or
atari@benjamin.net. If you cant reach me at benjamin.net see my E-Mail/
Web info in my Signature attached to the bottom of any of my messages!

I acutally have a number of these ads on my FTP site, along with loads
of others. I don't have the last two you mention though. Actually I
know there are quite a few I'm missing, but I've managed to amass
quite a few from the early 80s up through to the Jag.

So, they did advertize, but most of their campaigns were short-lived
and targeted to specific areas/networks. Pity, really...

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

Hi Craig,

The best tape to disk program I've used is Transdisk IV which was
published by Digicomm and marketed here in the UK by Page 6 Atari
Magazine in the late 1980's. If you have APE or SIO2PC software and
cable I could email you a copy as an ATR file and then you could copy
it to a floppy with APE etc.

I am interested in anything anybody might happen to know what ever
became of OSS Action! ?

I have the cartridge, I used to use Action! for most of my
programming. Somewhere in the intervening years I managed to loose the
manual. I would like to get a replacement copy. Does anybody know
what, if anything, is availiable (for instance, does anybody have old
unsold inventory)?

OSS was bought out by ICD and ICD was bought out by FTE. If my info is correct, there wasn't an inventory of Action carts when FTE took over. There was a minor update to the Action! cart, instead of using the INIT vector to start the program it switched to the RUN vector so it would have better compatibility with other products.

Bill Kendrick posted a copy of the language syntax ~pages 191-196 of the manual and said he might put it up on the archive at umich. I saved a copy if you want it emailed to you.

I haven't programmed in Action! in years, but I still remember quite a bit. If you have a specific question like "Why doesn't this piece of code do what I want it to?" I could probably tell you.

6808. Re: Action!

I would definitely be interested in receiving a copy of that language syntax. I also lost my manual and after not programming or even looking at what I did program for 10 years, the programs I wrote in Basic are very hard to follow. So, Action! is what I'm going to start back up in.

There was a series of articles in Analog about programming in Action! written by Dave Arlington. I don't know how many there were but I managed to find copies of the first 5 of them. Does anyone know if there were more and if so, were I might find copies of them? I know there are some Analog issues posted on the net but I couldn't find them. Anyone know where those might be.

BTW, B&C (www.myatari.com\) does list Action! manuals for sale. $15.

David

Well, two requests so I guess newsgroup posting would be appropriate.

The keywords are pretty close to the BASIC equivalent with a slight change
in syntax. Basic's POKE is just POKE() kind of stuff.

Bill probably has some examples on his web site, I reccomend getting them if
he does. He really wrote his code to be readable and obvious.

-----------------------------------------------------------------------

This document is an ASCII text transcript of pages 191 through 196
(Appendix A) of the Action! programming language documentation,
"A Reference Manual For The ACTION! System," copyright 1982, 1983
by Optimized Systems Software, Inc.

Typed by Bill Kendrick, bill@newbreedsoftware.com, June, 1999.

-----------------------------------------------------------------------

Appendix A: ACTION! Language Syntax
-----------------------------------

The following is the syntax of the ACTION! language in
Backus-Naur form. This form has a couple of special
characters:

Symbol Meaning
------ -------
::= "is defined as"
| "or"
{} "optional"

The appendix is set up to allow you easy access to the
particular information you want, with subsections as
follows:

A.1 ACTION! Constants 192
Numeric Constant
String Constant
Compiler Constant
A.2 Operators and Fundamental Data Types 192
Operators
Fundamental Data Types
A.3 ACTION! Program Structure 193
ACTION! Program
```

A.4 Declarations 193
System Declarations
DEFINE Directive
TYPE Declaration (for records)
Variable Declarations
Variable Declaration for Fundamental Data Types
Variable Declaration for Pointers
Variable Declaration for Arrays
Variable Declaration for Records
A.5 Variable References 194
Memory References
Fundamental Type Variable References
Pointer Type Variable References
Array Type Variable References
Record Type Variable References
A.6 ACTION! Routines 194
Routines
Procedure Structure
Function Structure
Routine Calls
Parameters

A.7 Statements 195
Assignment Statement
EXIT Statement
IF Statement
DO - OD Loop
UNTIL Statement
WHILE Loop
FOR Loop
Code Blocks
A.8 Expressions 196
Relational Expressions
Arithmetic Expressions

A.1 ACTION! Constants

Numeric Constant

```
<num const> ::= <dec num> | <hex num> | <char>
<dec num> ::= <dec num><digit> | <digit>
<hex num> ::= <hexnum><hex digit> | $<hex digit>
<char> ::= '<any printable character>
<hex digit> ::= <digit> | A | B | C | D | E | F
<digit> ::= 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9
```

String Constant

```
<str const> ::= "<string>"
```

```
<string> ::= <string><str char> | <str char>
<string char> ::= <all printable characters, except " >

Compiler Constant
-----------------
<comp const> ::= <comp const>+<base comp const> |
<base comp const>
<base comp const> ::= <identifier> | <num const> |
<ptr ref> | *

A.2 Operators and Fundamental Data Types
----------------------------------------

Operators
---------
<special op> ::= AND | OR | & | %
<rel op> ::= XOR | ! | = | # | <> | < | <= | > | >=
<add op> ::= + | -

--192--

<mult op> ::= * | / | MOD | LSH | RSH
<unary op> ::= @ | -

Fundamental Data Types
----------------------
<fund type> ::= CARD | CHAR | BYTE | INT

A.3 ACTION! Program Structure
-----------------------------

ACTION! Program
---------------
<program> := <program> MODULE <prog module> |
{MODULE} <prog module>
<prog module> ::= {<system decls>} <routine list>

A.4 Declarations
----------------

System Declarations
-------------------
<system decls> ::= <DEFINE decl> | <TYPE decl> |
<var decl>

DEFINE Directive
----------------
<DEFINE decl> ::= <DEFINE> <def list>
<def list> ::= <def list>,<def> | <def>
<def> ::= <identifier>=<str const>

TYPE Declaration (for records)
------------------------------
<TYPE decl> := TYPE <rec ident list>
```

```
<rec ident list> ::= <rec ident list> <rec ident> |
<rec ident>
<rec ident> ::= <rec name>=[<field init>]
<rec name> ::= <identifier>
<field init> ::= <fund var decl>

Variable Declarations
---------------------
<var decl> ::= <var decl> <base var decl> | <base var decl>
<base var decl> ::= <fund decl> | <POINTER decl> |
<ARRAY decl> | <record decl>

Variable Declaration for Fundamental Data Types
-----------------------------------------------
<fund decl> ::= <fund decl> <base fund decl> |
<base fund decl>
<base fund decl> ::= <fund type> <fund ident list>
<fund type> ::= CARD | CHAR | BYTE | INT
<fund ident list> ::= <fund ident list>,<fund ident> |
<fund ident>
<fund ident> ::= <identifier>{=<init opts>}

--193--

<init opts> ::= <addr> | [<value>]
<addr> ::= <comp const>
<value> ::= <num const>

Variable Declaration for Pointers
---------------------------------
<POINTER decl> ::= <ptr type> POINTER <ptr ident list>
<ptr type> ::= <fund type> | <rec name>
<ptr ident list> ::= <ptr ident list>,<ptr ident> |
<ptr ident>
<ptr ident> ::= <identifier>{=<value>}

Variable Declaration for Arrays
-------------------------------
<ARRAY decl> ::= <fund type> ARRAY <arr ident list>
<arr ident list> ::= <arr ident list>,<arr ident> |
<arr ident>
<arr ident> ::= <identifier>{(<dim>)}{=<arr init opts>}
<dim> ::= <num const>
<arr init opts> ::= <addr> | [<value>] | <str const>
<addr> ::= <comp const>
<value list> ::= <value list><value> | <value>
<value> ::= <comp const>

Variable Declaration for Records
--------------------------------
<record decl> ::= <identifier> <rec ident list>
<rec ident list> ::= <rec ident list>,<rec ident> |
```

```
<rec ident>
<rec ident> ::= <identifier>{=<address>}
<address> ::= <comp const>
```

A.5 Variable References

Memory References

```
<mem reference> ::= <mem contents> | @<identifier>
<mem contents> ::= <fund ref> | <arr ref> | <ptr ref> |
<rec ref>
<fund ref> ::= <identifier>
<arr ref> ::= <identifier>(<arith exp>)
<ptr ref> ::= <identifier>^
<rec ref> ::= <identifier>.<identifier>
```

A.6 ACTION! Routines

Routines

```
<routine list> ::= <routine list> <routine> | <routine>
<routine> ::= <proc routine> | <func routine>
```

--194--

Procedure Structure

```
<proc routine> ::= <PROC decl> {<system decls>}
{<stmt list>}{RETURN}
<PROC decl> ::= PROC <identifier>{=<addr>}({<param decl>})
<addr> ::= <comp const>
```

Function Structure

```
<function routine> ::= <FUNC decl> {<system decls>}
{<stmt list>}{RETURN (<arith exp>)}
<FUNC decl> ::= <fund type> FUNC <identifier>{=<addr>}
({<param decl>})
<addr> ::= <comp const>
```

Routine calls

```
<routine call> ::= <FUNC call> | <PROC call>
<FUNC call> ::= <identifier>({<params>})
<PROC call> ::= <identifier>({<params>})
```

Parameters

```
<param decl> ::= <var decl> NOTE: max. of 8 parameters allowed
```

A.7 Statements

<stmt list> ::= <stmt list> <stmt> | <stmt>
<stmt> ::= <simp stmt> | <struc stmt> | <code block>

<sim stmt> ::= <assign stmt> | <EXIT stmt> | <routine call>
<struc stmt> ::= <IF stmt> | <DO loop> | <WHILE loop> |
<FOR loop>

Assignment Statement

<assign stmt> ::= <mem contents>=<arith exp>

EXIT Statement

<EXIT stmt> ::= EXIT

IF Statement

<IF stmt> ::= IF <cond exp> THEN {stmt list}
{|:ELSEIF exten:|}{ELSE exten} FI
<ELSEIF exten> ::= ELSEIF <cond exp> THEN {stmt list}
<ELSE exten> ::= ELSE {stmt list}

DO - OD Loop

<DO Loop> ::= DO {<stmt list>} {<UNTIL stmt>} OD

--195--

UNTIL Statement

<UNTIL stmt> ::= UNTIL <cond exp>

WHILE Statement

<WHILE loop> ::= WHILE <cond exp> <DO loop>

FOR Loop

<FOR loop> ::= FOR <identifier>=<start> TO <finish>
{STEP <inc>}<DO loop>
<start> ::= <arith exp>
<finish> ::= <arith exp>
<inc> ::= <arith exp>

Code Blocks

<code block> ::= [<comp const list>]
<comp const list> ::= <comp const list> <comp const> |
<comp const>

A.8 Expressions

```
Relation Expressions
--------------------

6810. Satan's Hollow cart, does it exist?

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-28 20:28:48 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <8tfd6sfiu1@nnrp1.phx.gblx.net>
Source record: 40929

I have been looking for Satan's Hollow on cart for 8-bit Atari. Does it exist? I would pay high or trade heavy for it.

(any one of the following could be traded from my collection, Jaguar Aircars shrinkwrapped, Crazy Climber 2600 loose cart, Dracula X for Turbo Grafx etc., many more possibilities.)

E-mail me if you can enlighten me. Thanks! -Satcom2

Yes, that would be nice, better than having nothing.

Thank you very much.

I haven't programmed in it for quite a few years either (which is why I
somehow managed to loose the manual). I do have a copy of the Action! tool kit
manual. I probably should scan that in just for posterity sakes.

Its listed as NR - not released. Another victim of the big crash. Quite a few intended CBS titles didn't make to the 8bit.

hello there dan/jeri, keeping the atari hummy i see

Re: what disks does the a1050 use

It's most probably been mentioned elsewhere, but the 1050 does not, I REPEAT DOES NOT use and can not handle high dens. HD disks, so forget using hd disks, if youv'e got any, use 'em on your pc (if you have an int. 5,25 hd mech, or sling them in the bin

Hello there russell/craig, keeping the atari hummy i see

Re: transfering atari tape to disk

Transdisk, not bad, make sure you have the latest version (the one that allows you to use the xe the 64k+ xl's xtra memory)
It does handle some ? but not all the non standard tapes, Unless you have indepth hacking knowledge of 6502 and know the structure of trandisk menus (xl/xe and xt.sys) which start at sector 915 on a 1050 dens. disk, you wont be able to convert the file to howfen or dos

In the US the had a couple of programs C.O.S (not to be confused with a similar title by english s/w) by Alpha systems (of impersonator and parrot fame) or the impossible (CSS, of Super archiver and the pill fame)

The Germans had a program called the freezer (not to be confused with a similar sounding program from trandisks authors), they also had/have C-SIM and Super C-Sim (the down side to these programs wher that they only handled standard multi part boot tapes (no EA, Novagen, English s/w etc) I beleive C-Sim and compatables were eventualy built into the german/ european equivalent of Omnimon

The best menu creator I'd seen is howfendos, I know I have versions 3.7 and 3.8 available, I cant remember If i have version4, although like c-sim it only handled standard multipart boot tapes, because howfendos came with built in routine to convert from rob c , jw (multiboot), ian k, elton (us alpha), most of the non standard stuff (as above) were originally hacked out and split, and put onto these menus, most, if not all of the non standard boot stuff is now on howfen

Nothing against transdisk (as I used to use it before i had howfen), but howfen's game loader takes up less space, and each file on a transdisk menu is betw. 20-50 sectors longer then if you had the same file on howfen, dont ask me why

Good luck, keep those atari's hummy

There are PD handlers available for the CX85 which work much better than
the stuff released by Atari. Essentially, all you need is a vertical
blank routine to read the joystick port and translate the stick value
into anything you like. The only additional coding is for two keys which
return the same value and are differentiated by a trigger value.

Strictly speaking, no. Loosely speaking, even a stock 1050 can, just not
well.

Doesn't have anything to do with Sparta DOS. IBM uses 512 byte sectors and a
stock 1050 will only read the first 128 bytes of an IBM sector and a USD
will only read the first 256 bytes.

You may be thinking of a Happy Drive or maybe a Black Box.

I was kind of curious if anybody out there is still using the ATR
8000? I have one, but it has been a long time since it was connected
up.

At one time I was running mine with a pair of 8 inch double sided,
double density drives that I purchased at an auction when Lobo Drives
was liquidated. I later changed to a pair of 3.5 inch single sided
disks and a pair of 5.25 inch double sided disks. Those were the
days.....

6822. Atari questionaire...

Newsgroup: comp.sys.atari.8bit
Date: 2000-10-29 04:56:41 UTC
From: Jared Falvo <luposian@mailcity.com>
Message-ID: <76OK5.305$z93.44406@news.goodnet.com>
Source record: 40941

Anyways, some (purely hypothetical) questions:

1) *IF* such a computer, with the specs I list below, were to be released... by Atari, mind you.... would you buy one, provided that you could run (at least) old ST software on it?

a) 1040ST and/or Mega ST case
b) 32-64Mb of RAM
c) ATI accelerated 3D video chipset
d) Yamaha XG audio chipset

2) If that unit came in two models; the 1040ST-styled one being less powerful than the Mega ST model, which would you buy?

a) Home
b) Business

3) Would you be willing to pay $1,000 for the 1040ST-style and/or $2,000 for the Mega ST model? If not, what would you be willing to pay for either?

3) If Atari, as a computer manufacturer, returned, would you be excited and tell others?

Please, no smart-ass remarks or non-serious replies. I am planning on compiling the number of users that reply positively to this post and I'll post this message to other Atari newsgroups and elsewhere to see just how many people are out there that *would* be willing to buy such a system. No need to repeat reply if you visit more than one newsgroup this message is at.

If you know people that might be interested, show them this message and let me know if they are. I'll add their numbers to the list. I want to see just how worthwhile my idea is to the general Atarian/non-Atarian Internet public.

Thank you for your time...

Jared

Absolutely. I have always wanted an ST and if this came out, It would be at
the top of my list.

> 2) If that unit came in two models; the 1040ST-styled one being less

Oh, for both instances I would take the Mega ST, provided it would surf the
net. I have a business on eBay I must attend to.

> 3) Would you be willing to pay $1,000 for the 1040ST-style and/or $2,000 for

Of those 3, I'd choose the 800XL. I love my old tanks too though, but XL's have more expansion possibilities and runs more software. I'd go for a 130XE if you find one with a decent keyboard. They were released with both shite keyboards and decent keyboards. I have one of each.

I would go for an 800XL with a Rambo upgrade and a better power supply
than comes with the computer (I had a power supply that worked fine
... until I installed a Rambo - within two weeks it had burnt out - I
built my own supply and it was back working for years afterwards).

(there are other upgrades - some are more compatible with some software)

```

Looks like is was a baud rate issue (in my non expert opinion!), I've disassembled the first few sectors and had a good look, this seems to be the case, you only have to change 1 byte to make it work!
Any way, I've uploaded what I found to my *very* fledgling Atari site http://www.umii.co.uk/alpha/alpha.htm I have under construction, with instructions ont what to do, I've also included a download of a fixed ATR file (It's got all the menu creation software on it if anyone want's to play around) Thanks for everyone's help, let me know if I've commented any of the code wrong, I'm a bit rusty with 6502 ML, just glad I never chucked my mapping the Atari book out!
Thanks to Steve, if I had not had his fixed version to compare it with I would have never got there at all !!

Thanks! Wandering through the code I noticed the 1050 can half
step. If that is right, kind of a shame no one ever came out with 80 track
drives mechanisms for it.

I still have one. Drive set up I have is 720k 5.25", 720k/360k switchable 5.25", 360k 5.25", 720k 3.5".

But haven't turned it on in a couple of years now. Not much programming lately, so most of the time I just use an USD 1050 if I boot the Atari. I have an old Tandy 1000tx with SIO2PC software on it, but I don't really use that much except for testing SIO2PC cables.

I own two STs, but never really fell in love with the things. I think most computers post Atari 8 bits lack the amount of synergy, so it is hard to like them.

But there are clones already that pretty much have this or better spec.
Why make yet another?

I am in the same shape; used the ATR8000 for several years with 2-360K DSDD generic PC drives. Alas, it died and is under repair at present.

-Ron

I don't have a solution but I admire the problem.

Well, that makes sense, and I've written a basic calculator program that uses the keypad, but I guess what I could use is the source listing of the handler.sys to give me some ideas. Thanks again, Mo.

Where is the list avaliable from? Does anyone know the legality of 8-bit
stuff at the moment? I.E. after xx amount of years the copyright drops as
support is no longer avaliable?

Although I don't have the source handy, it only takes a few lines of
Basic to turn the keypad output into atascii. If you write a little
program that just prints the joystick and joystick trigger values,
you'll see the relation. In your program, it could very nicely be
rigged as a gosub routine, setting some variable with the next keypad
value pressed.

Barry,
Get yourself an 800 w/48K, 4 wico joysticks, 3 good friends, and a copy of either Ali Baba and the Forty Thieves, or M.U.L.E. and you have the ultimate setup. Better set aside some serious time, because I have spent countless hours with each. The 800 is built like a sherman tank, and is "IT" for me. I still have my original 800, and it warms my heart just knowing it is there.

Seriously, no matter which Atari 8bit you end up with, you can't go wrong.

Isaac

Howdy folks

Pictures of the Yearly members meeting of the Atari Bit Byter User Club in
Herten Germany can be found at www.atari-computer.de/abbuc

Click on 'mit' (with) or 'ohne' (without) Java.
A menu will appear on the right side of your screen.

Click on JHV 2000
2 new entries will appear.
Click on 'Bilder'
Then click on the pencil below the first mini-foto.
This picture will be enlarged.
Click the -> arrow to see the rest of the pictures.

Two pictures below mine (Why My name is the only one mentioned is beyond me)
you can see Erhard Puetz. But Fox-1, TXG and Andreas Magenheimer should be on
some of them too. (today the connection is very very slow, so I'm not gonna
check).

> Absolutely. I have always wanted an ST and if this came out, It would be
at
> the top of my list.

You don't want to let your enthusiasm for Atari get in the way here. The original ST was less then $500 and a large part of the price was due to high ram prices at the time. I think 256k DRAMS were selling for ~$2.50 each back then, you needed 32 for a 512k ST with its 16 bit wide buss.

IMO: Good as it was, it isn't worth $1000 to play Dungeon Master. That brings you to the point where you have to think in terms of what you can do with the machine that you can't do now. Using your "surf the net" as a criteria, you can do that with cheaper hardware on other platforms.

Every computer needs a killer application for it. The early STs were better game machines then their contemporaries with the exception of the Amiga and they had a good foothold in DTP with Calamus. They also enjoyed good popularity with their midi capabilities, as is off mentioned the STacy was on tour with a number of popular musical groups at the time.

Those niches were a snapshot in time. As soon as the markets were exposed, me too products came out on other platforms. This transferred the killer aps nature to being a commodity.

Any successful product now has to either have a niche with a killer ap, or be able to survive in a commodity based market. Something like an ST that runs for a year on 3 pen light batteries would find a niche, otherwise it is just the same old same old.

6850. Questions about 800XL / 1050

Hi, If anyone could answer a few questions about the 8-bit Ataris I'd be grateful!

First, I've got an 800XL with a 1050 drive, but I'm having difficulty finding blank disks to use with it. However, I have got a whole load of 5.25" disks for my BBC Master 128, and wondered if it would be possible to use these disks with the Atari ?

Also, what is an SIO2PC cable, and where can I buy one from? And finally, I know there was a later 5.25" disk drive released with the 130XE/65XE machines, the XF551 (?) Does anyone know of a place to buy one of these (preferably in the UK)

TIA

Barry

Any standard 5.25" floppies will do.

>
>Also, what is an SIO2PC cable, and where can I buy one from? And finally, I

SIO2PC is a cable that allows you to hook any Atari floppy drive up to
your PC in order to transfer data to and from the PC and Atari 8-bit
floppies with the bundled software.

>know there was a later 5.25" disk drive released with the 130XE/65XE
>machines, the XF551 (?) Does anyone know of a place to buy one of these
>(preferably in the UK)

Yes, it's the XF551; double-sided, double-density, high speed transfer
under SpartaDOS or MYDOS (though not quite as fast as a 1050 with US
Doublers). Can't help you with where to buy one in the UK tho...

Just for your info, Some guy in West aust made a copy of it and was
selling it. I seen it, pulled it apart (didn't have plated through
holes) and took photo's of it. Did a circuit despite the numbers
rubbed off the chips. and took a copy of the rom. Didn't do anything
about it.

Hi Mathy-
Could you identify some of the CSA8/newslist "regulars" in the photos for those of us who have never actually met most of the folks from the European countries? I would like to be able to "put a face with a name". For instance, are you the one with the beard in the foreground of the picture of your selling booth?
Thanks,
Larry White

> 5.25 with ataridsk

Hello Carmel,
yes, thats exactly what Ataridsk (from Hiassoft) is good for. You can use it under DOS on the PC to read and transfer Atari files from an Atari 180k disk to the PC or to transfer PC files to an Atari 180k disk. The steps are:

Atari -> PC
1) Load Ataridsk under DOS
2) Choose Options, when the second pull-down window appears choose your 5,25 drive (drive A: or B:); press ESC;
3) Choose Mount disk (the program reads the Atari DIR; must be 180k, otherwise an error occurs)
4) Choose XL to PC transfer
5) The XL files appear in a window, select/deselect your files here with the Space key and then use Copy files (at the end of the window) to transfer all files to the PC...

PC -> Atari
1) Load Ataridsk under DOS
2) Choose options, a second window appears, here choose your 5,25" drive (A: or B:)
3) Next (still in the second window) choose format disk, install a 5,25" DD disk and confirm with Yes;
4) When done, press Escape, then choose PC to XL transfer (there is no need to mount the disk, it is mounted automatically after formatting)
5) a new window appears, choose your desired files with the Space key and move to the end of the window where you find "Copy files", press Enter here and all selected files will be copied to your Atari 180 disk. (If there is not enough space on the 5,25" disk an error will occur with every file that cannot be transferred)
6) now put the 180k disk into your Atari DD drive and read it...
(if you have any difficulties to read the Atari files, you should use a 5,25" DD drive in your PC instead of a HD drive...)
Good Luck - Andreas

Well,
I do not know/have the USD, but the Happy came with a file program to
read 180k formatted IBM disks (works good with IBM and DOS; not sure if
WIN xx still formats 180k). Besides there is also Ataridsk (a PC program
from HiasSoft) to transfer files from/to Atari... -Andreas

You can't convert an .st file into a .str file. atr files are 8 bit disk
images for various emulators. st images are just that, Atari ST disk images
for ST emulators. If you had those in st format you could play them on Atari
ST emulator like Pacifist or WinStone.

The USD can only handle 128- and 256-byte sectors. All PC drives (HDD and FDD) use 512-byte sectors so there's no way. The Happy controller firmware must have included a 512-byte capability at the hardware level.

Did Bob Puff add RAM to his XF3.5 upgrade?

Reason I ask is I seem to recall he had some kind of MS DOS reading
capability in that too.

I know we speculated about it at the time, but with a new ROM you should be
able to read the same 512 byte sector 4 times and only send the data in 128
byte chunks.

Of course it then wouldn't be a USD or 1050 strictly speaking.

Yes, I still have and use my original ATR-8000. It has 2 360K 5 1/4" and
1 1.2meg 5 1/2" drives on it. I use a Gemini 10X , Canon BJ4100, a HP DJ,
and a HP laser 6L printer on it. And I have several others I am not
using, one with a copower board.

The Xformer cable is about a 15 year old design and I don't think Derek supports it any longer.

The Xformer cable used timing loops and IMO was really set up to handle the slower computers available at the time. Problems started happening ~when the Pentiums came out. Maybe you could test the cable on an old 386/486 to see if it works.

Other then that, use the cable to build a SIO2PC or Prosystem cable and go from there. They should allow you to convert the ATR to XFD format after some jumping through hoops.

The only restriction is you can't run copy protected images from the emulators. If you know enough to build a Xformer cable, you know enough to build an SIO2PC cable. The extra cost/parts for an SIO2PC is only about 90¢ and they should never go obsolete.

Well,
they did not. they used a (software-) trick. Since the Happy has a track
buffer it could buffer up to 6-8k; the program just told the Happy to
split the 512bytes into two sectors of 256 bytes. You can do this with
almost any drive that is capable of 256 bytes per sector. Just write a
program that splits 512 bytes sectors in two 256 bytes sectors and you
are done... -Andreas

P.S.: A friend of mine tried it with a self-written program for the
XF551 and it worked. You know: the XF does not have a track buffer...

he typed:

>My 2cents? I think Hasbro's done a terrible job... I see the price, and the
>packaging, of their 'retro' packs at clubs like Sam's, and Price Club...too
>little value for the price...

Hasbro's updates are not much more than hastily slapped together
retrofits that try and recapture the fun and wonder of the originals,
but fall just short of capturing the fun and wonder of a Slinky. I
mean, they're okay on their own, but the rush job is painfully evident
throughout their games. Galaga's just the latest in a stream of
rushed games -- it won't even play properly on my system, presumably
because it doesn't like my video card (Voodoo3).

I guess no one told Hasbro about beta testing...

...or alpha testing...

Yes, there is version for the ST. It was still listed at emulators.com. It
works with only ST computers i tried a TT and it wouldnt work. Very simple to
build uses 1 resistor.

Yes, I actually bought a Xformer cable from B&C when they first came out and
IIRC the package had a disk with Xformer on it. Could have been seperate,
but I seem to recall a disk in there.

There was also someone who wrote an ST program that installed the 1050 on
your desktop so you got an bit more of disk storage.

- Last Updated 11/01/00
- Sold items removed

I have a limited amount of brand new Atari Jaguar items for sale or trade (these are not refurbished units). These packages are ideal for new collector's or somebody wanting to start or add to their Atari collection. If you have any questions, please feel free to ask. I am also willing to trade for certain items, please see my list at the end of this post. All prices quoted are in U.S. funds with the buyer paying shipping.

If you are interested in any of these items, please respond to me by using this automated link jim_l@NO.SPAM.telusplanet.net?subject=Classics.Atari.Jaguar (removing the NO.SPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

** Atari Jaguar Packages - Brand New (with controller, RF Box & AC adapter)**
==========
-.Atari Jaguar with CyberMorph cartridge and Composite Video Cable $45
- Atari Jaguar with CyberMorph cartridge $35
- Atari Jaguar (No Cart) $25

** Atari Jaguar Accessories - New**
==========
- Team Tap (4 Player adapter) $20 - 2 units left
- Jaguar unit alone (No power supply, controller or accessories) $20
- Composite Video Cable $15
- Spare Controller $15
- AC Power Supply $10
- RF Switch Box $5

** Atari Jaguar Games - New/Shrink-wrapped**
==========
- Checkered Flag $10
- CyberMorph $5 (No Box)

Atari Force Comics Please make an offer
==========

All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- An original Intellivision keyboard for the original Intellivision
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

Last Updated 11/01/00
- Sold/traded items removed

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.8bit (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

Hardware Please make an offer
==========
- Atari 600XL - with power supply, RF cable
- Atari 800XL - with power supply, RF cable
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

8-Bit Cartridges Please make an offer
==========
- Basic with Basic Reference Manual
- Final Legacy
- Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
- Realsports Football
- Star Raiders
- Tennis

8-Bit Books Please make an offer
==========
- Compute's "The Atari Basic Source Book"

Atari Force Comics

Hello, my name is Benjamin Smith. I'm a Collector & Jaguar Game Player.
With all my games to play, I have no one to play Games with on my Atari
Jaguar. I live in Portland, Oregon. USA and I'm looking for someone to
play Jaguar Games with. You don't necessarily have to have a Jaguar.
Most any Atari will do. I'm thinking of starting Atari meetings in
Portland. Focused on Gaming. Call Ben anytime @(503)256-9974 or E-Mail:

e-mail: atari@benjamin.net

If I'm unable to answer, leave a message and I'll call you back.

6879. 8 Bit Stuff free (SF Bay Area, Calif)

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-02 19:01:13 UTC
From: ptchamb.fake@fake.svpal.net
Message-ID: <ptchamb.fake-0211001101430001@192.168.1.2>
Source record: 40848

Hi everyone: I have not posted on this group before but this is no joke.

I have saved a very complete set of Atari 8 bit documents, computers, software, and periferals, (850, happy drives, etc)

I have saved them for 15 yrs. I am now 57 and am never going to get to setting it up.

I was going to try EBay but I dont even want to inventory it.

It consists of working computers, 850, disk drives, (at least one happy drive)

A rack of games on disk, foreign language learning stuff, tape player, books on ataris, assembly lang for 6502, some internal documents from atari with source code, more books and even a cardboard box full of the old magazine devoted to atari 8 bitters that I cant think of the name right now. As well are computer boards, internal power supplies, roms, cartriges of games, basic and many others. There are spreadsheets, word processors, etc etc etc.

Keyboards for 400's internals, etc.

I live very near where atari's headquarters were and picked up a lot of stuff as they were changing ownership. It was pennies on the market.

It will take an suv or a -large- trunk to take it.

I dont want to throw it away but am willing to give it to someone that can come and pick it up so I can have my shop back. I am in Los Altos in the Bay area of california near San Jose.

It was all working (the assembled pieces) when it was put away over 10 years ago. I make no claims now but it has been sheltered either in the attic or the shop for that period.

The deal is this: You contact me, you come, you take it ALL. No cherry picking. I would further expect you to share the stuff with others who need or want it. They were great computers and I always wanted to have a hobby with them but I realize it is not going to happen.

I am sorry for the folks who live too far away but packing all this stuff for shipping would be a tremendous headache and I just plain dont have the time.

Contact me at ptchambatsvpaldotorg

6882. Howfen Dos

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-02 22:28:14 UTC
From: russell.spearing@btinternet.com
Message-ID: <3a01e9c0.87032238@news.btinternet.com>
Source record: 40850

Does anybody know where I can get a copy of Howfen Dos. I have an original copy of version 2.2 but when I copy it to an ATR file on the PC and then boot into that copy it tells me that it is a copied disc and won't go any further.

Any help gratefully appreciated.

Russell

Naturally I go with the beige, so 400/800 for me is the way to go. Granted,
neither can access the additional 16K of memory like the XL computers and they
have some software that is anot available to them that the XL and XE can
access.

With that said, I love their keyboards (both the 400 and 800), how they are
built, how they look.. they are just cool machines!!

The Atari "Hippo" 800 all the way!

I replied to this yesterday. But somehow my reply got posted in
the 'Alpha Loader' thread instead.
Andreas Magenheimer says he owns howfen DOS.
I never heard of a copy protected DOS, but I guess it is one.
I facetiously suggested Andreas might help you crack it.
I said I never heard of howfen DOS, or alpha loader for that matter.
Wonder what's so special about howfen and alpha loader.
Never thought I'd not understand something like this on the A8.
Someone says they have version 3.7 or 3.8. Sounds like your
2.2 is a bit outdated.
So, What's so special about howfen DOS, and alpha loader?
Russg

I'm sorry if I keep posting reply to this. I'm having problems with my
Outlook Express and servers or something.
In another thread, Alpha Loader thread, Andreas Magenheimer says he
owns howfen DOS.
I never heard of a copy protected DOS before, but apparently howfen
is.
What's so special about howfen?
Your (Russell's) 2.2 is aparently outdated as someone else mentions
3.7 or 3.8.
Anyhow, maybe Andreas will read this thread and respond as to
whether howfen is copy protected and so forth.

If your 8-bit can do d/d, then I would recommend AtariLink by Hiassoft over what you suggest. It is file oriented so complete disks must be compacted with Discomm or equivalent; the .DCM file can be reconstituted onto a blank (or not) .ATR or .XFD image.

-Ron

I don't have a solution but I admire the problem.

Good to see you back my Hippo friend! I can't help but agree. The computer
looks like something out of a "b" sci-fi film. It's cool in an architectural
sense as well, very anti modern with sort of a clunky design. Plus, the 400
looks like the cash registers at McDonald's.

Interesting scenario... Unless there is some hardware mod to the drive, this
situation must be a sector copy problem with the ATR transfer process; have you
checked to see if some data is hidden in sector 720?

-Ron

I don't have a solution but I admire the problem.

>file (It’s got all the menu creation software on it if anyone want's to play
around)

Interesting stuff. Strictly double density; they skips sectors 2-3 because
numbers 1, 2, 3 can only be 128 bytes while 4 & 5 can be 256. One of your JSR
$2020 is actually just 3 ascii spaces in the text.

still digesting...

-Ron

I don't have a solution but I admire the problem.

1050 density .ATR's and .XFD's are a little scarce, but they do exist; I think
I have a couple found somewhere...

-Ron

I don't have a solution but I admire the problem.

I finally located the pair of 360K 5 1/4" drives I had for mine. Main reason I want to get it all back up and running is so I can transfer all of the files I had that are of interest to me to CD rom for archival purposes. And, it might be fun to run a program or two. I am still trying to find a joystick in my junk....know there is one in there someplace.

I also, on occasion, ran CP/M on the Atr, although, I used a standard RS-232 terminal when I did this (I used an old Wyse 50). When I ran CP/M, I used 8 inch drives. If I still have the floppies, I have no idea where they are. I rarely used CP/M, the Atari worked much better for most things in my opinion.

Hello there atari guys, hows the atari going

Re:Howfen dos

Howfen dos, isn't a dos in the true sense.. i.e dos 2.5, it is predominantly a menu system, and menu conversion program, it is unprotected and is single stage disk boot

I have version(s) 3.7 and 3.8, I havent an siopc or ape/ape prosys cable, but I do own a pc with int. 5.25 d/d, can anyone help me with anadisk or deanna, and I'll be able to convert them to pc Atr format

If the Atari can handle the image, so can SIO2PC as, on the PC, it's just
a file. My first PC was a $10 garage sale special which only had two
360k floppies. Using SpartaDOS, I set up a 353k format which was the
absolute maximum the PC could stick on a 360k floppy allowing for FAT,
the SIO2PC header, etc. It worked fine and could easily be reformatted
for use with MyDOS.

jkp

Subject: 0.1) Table of contents

0.1) Table of contents

Introduction to the Atari
1.1) What is an Atari 8-bit computer?
1.2) What are some of the performance features of the 8-bit Atari?
1.3) What is the internal layout of the 8-bit Atari?
1.4) How did Atari get it's name?

File Formats
9.1) What's this UUEncoding stuff (.uu, .uue files) all about?
9.2) What is an .arc file?
9.3) What are the .DCM, .ATR, and .XFD file formats?
9.4) What are the .XMO and .BIN file formats?
9.5) How can I make my commercial boot disk (tape, cart) into a load file
or disk image?
9.6) How can I convert my commercial boot tape into a cassette image file?

Video Signal
10.1) What kinds of monitors can I use with my Atari?
10.2) What is the difference between NTSC and PAL machines?
10.3) Is the software for the Atari 8-bit computers "TV-standard dependent?"
10.4) What are the PAL, NTSC and SECAM video broadcast standards?

File Transfer Solutions
11.1) What are the best terminal emulators available?
11.2) Can I read/write 8-bit Atari disks on an IBM-PC?
11.3) How do I transfer files using a null modem cable?
11.4) What is SIO2PC?

Peripherals
12.1) What are the Atari 810, 1050, and XF551 Disk Drives?
12.2) What floppy disk drives can I use with my Atari?
12.3) What do I need to connect a hard drive to my 8-bit Atari?
12.4) What should I know about modems and the Atari?
12.5) What is the Atari XEP80 Interface Module?

General Interest
13.1) What's the best DOS for the Atari?
13.2) What hardware has Atari created in the 8-bit computer line?
13.3) What are the power-supply requirements for my Atari components?
13.4) What are the pinouts for the...?
13.5) What BBS software can be used on the Atari?
13.6) What versions of Atari BASIC or the CTIA/GTIA chip do I have?
13.7) Which versions of the Operating System (OS) are there?
13.8) What games support 4 simultaneous players on the 400/800?
13.13) What programming languages are available for the Atari?
13.15) What makes some XL/XE software incompatible with the 400/800?
13.16) What games run only on the 400 and 800 models?
13.17) What games make use of the Light Gun?
13.18) How do I type a tilde (common character in Web URL's) on my Atari?
13.19) What's the difference between ASCII and ATASCII?

Coming soon:
What is APE?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE 800XE XE Game System

Here is a very condensed history of Atari, centered around their 8-bit computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27. Atari created the first coin-operated arcade video game with the introduction of Pong. The video game industry was launched and has shaped pop culture ever since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), later known as the 2600, giving birth to home video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using the 6502 microprocessor. The Atari 800 was code-named "Colleen"; the 400, "Candy."

The following are most of the team who originally designed the 400/800. Credit for providing this information for the FAQ goes to:

Doug Neubauer (by way of James Finnegan, mailto:finneganj@delphi.com)
Jerry Jessop, mailto:jjessop@ix3.ix.netcom.com
Scott Emmons, mailto:scotte@center.uscs.com

VLSI HARDWARE:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators - Partner in "Cyan Engineering"
Lawrence D. Emmons - Also one of the creators - Partner in "Cyan Engineering"
Joe Decuir - ANTIC and system and creator
???A French guy - ANTIC logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - POKEY logic design
Mark Shieu - POKEY chip design
Steve Stone - POKEY layout design
Steve Smith - Technician for ANTIC and GTIA
Delwin Pearson - Technician for POKEY

ATARI BASIC: (according to Atari BASIC Sourcebook)
Paul Laughton and Kathleen O'Brien - Most of Atari Basic
Paul Krasno - Helped with Trnscendental routines
Bill Wilkinson - Designed Floating Point Scheme
Bob Shepardson - Modified IMP-16 Assembler to accept special syntax tables
Paul invented
Mike Peters - Key punching and operating

1979
The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop, mailto:jjessop1@home.com writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirment had been meet.

The first "real" consumer units were shipped in Nov. of 79 and were 400's to Sears followed very shortly by 800's."

These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 128 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24 text resolution in 8 graphics modes and 6 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The 800 can be fitted with 1-3 of the following two RAM modules:
CX852 8K RAM module, CX853 16K RAM module
and must be fitted with a ROM module:
CX801 10K ROM, CX801-P 10K ROM for PAL machines

[WHEN WAS THE 400/800 REVISION B OS INTRODUCED????]

1981
November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop, mailto:jjessop1@home.com adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Buss Interface (PBI), providing fast parallel access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The 600XL can be expanded from 16K to 64K with the 1064 Atari Memory Module.

1984
Warner Communications sells Consumer Electronics and Home Computer divisions of Atari Inc. to Tramiel Technologies on Monday, July 2.

Atari Corporation is formed by Tramiel Technologies and its products marketed under the Atari brand.

(
Atari Games Corporation is also formed from the former coin-op division and markets coin-op games under the Atari Games brand.

Atari Games Corporation is a developer, marketer, licensor and publisher of coin-operated video games, having created such classics as Pong, Asteroids, Centipede, Missile Command, Gauntlet, Area 51, and San Francisco Rush

Extreme Racing. Atari Games Corporation is a brand of Midway Games Inc. (NYSE:MWY). The Atari Games home page is at http://www.atarigames.com.
)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus the FREDDIE chip, supporting the unique (but rarely used)
ability for the 6502C and the ANTIC to independently access RAM banks. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface (ECI), continuing the powerful feature of a fast parallel port. European 65XE's include the ECI port.

Only by the final production run of the 130XE and the European 65XE (when was this???) was the XL/XE OS revised to include a "keyboard test mode" that matched the XE keyboard, and a RAM test that tests the full 128K of RAM.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game (hold down Select at startup), while offering 64K RAM and full compatibility with the 65XE.

The 800XE, a 130XE with just 64K, was released at some point in eastern Europe. [WHEN???]

1992
Atari officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

1996
On July 31, 1996, Atari Corp. became a JTS subsidiary. JTS Corp., with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer markets.

(JTS filed for Chapter 11 Bankruptcy Protection on December 11, 1998, and then converted it to Chapter 7 on February 28, 1999)

1998
On February 23, 1998, JTS sold its Atari Division to HIACXI Corp., a wholly-owned subsidiary of Hasbro Interactive, Inc., which is a subsidiary of Hasbro, Inc., for $5 million in cash.

TODAY
Hasbro is a worldwide leader in the children's and family leisure time and entertainment products and services, including the design, manufacture and marketing of games and toys ranging from traditional to high-tech. Both internationally and in the U.S., its PLAYSKOOL, KENNER,

TONKA, ODDZON, SUPER SOAKER, MILTON BRADLEY, PARKER BROTHERS, TIGER, HASBRO INTERACTIVE, MICROPROSE, GALOOB and WIZARDS OF THE COAST brands and products provide the highest quality and most recognizable play experiences in the world.

Hasbro Interactive, Inc. is a global interactive entertainment industry leader, innovating new ways to play and developing, publishing and distributing the highest quality interactive games and lifestyle products for a full range of genres and platforms. A subsidiary of Hasbro, Inc. (NYSE: HAS - news), Hasbro Interactive has offices in the U.S., U.K., Canada, Germany and Australia, and internal development studios in the U.S. and U.K. For further information, visit Hasbro Interactive's Web site at http://www.hasbro-interactive.com.

Atari Interactive, Inc. is a Hasbro affiliate, online at http://www.atari.com/

Atari currently (4/00) markets:
Atari Arcade Hits 1 & 2
Centipede
Frogger
Glover
H.E.D.Z. - Head Extreme Destruction Zone
Missile Command
Nerf ArenaBlast
Pong
Q*Bert
The Next Tetris

*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16 luminances x 16 hues = 256 colors. (Four registers are for player-missile graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse video incarnation, are totally redefinable.

PLAYER-MISSILE GRAPHICS:
Four 8-bit wide, 128 or 256 byte high single color players, and four 2-bit wide, 128 or 256 byte high single color missiles are available. A mode to combine the 4 missiles into a 5th 8-bit wide player is also available, as is a mode to XOR colors or blacken out colors when players overlap (good for making three colors out of two players!) Players and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:

All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution, 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was

(fortunately!) rerouted through the normal audio output, and the keyclick can be disabled.

Subject: 1.3) What is the internal layout of the 8-bit Atari?

The following four paragraphs were written by Chris Crawford and appear in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. The text been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

CTIA ("Color Television Interface Adapter") / GTIA ("George's Television Interface Adapter") is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missile graphics, and collision detection.

POKEY (means "POT and KEY" as in the paddles and keyboard) is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

While the 400/800 models contain a generic 6502 CPU, all of the XL/XE models contain Atari's customized 6502C chip. Alan Manuel K. Gloria, mailto:mani@pworld.net.ph writes:

The difference goes something like this: On the Atari, there are two microprocessors, ANTIC and the 6502 or 6502c. To allow them to coexist, ANTIC must shut off the 6502/6502c, a process called DMA. The 6502 supports DMA, but in Atari's implementation, it required 4 chips. The 6502c has this additional circuitry built-in.

More on this from James Bradford, mailto:sup8pdct@mail.cth.com.au :
The 6502c in all PAL atari's, late 400/800, XL, XE NTSC atari's have a special 6502. This 6502 has an extra line called HALT. It is controlled by ANTIC which it uses whenever it needs the data/address bus. The HALT line is on pin 35 of the atari 6502 and must be pulled high for the chip to work (I think) . Early 400/800 NTSC atari's used a standard 6502 and a couple of chips to stop the processor when antic needed the busses

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to mailto:sup8pdct@mail.cth.com.au (James Bradford), "FREDDIE is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. FREDDIE also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a FREDDIE but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from FREDDIE, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to FREDDIE for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say FREDDIE does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO FREDDIE) and an extra 8 RAM chips."

And more recently James Bradford has written:
FREDDIE is just a memory decoder and timer. It replaces several chips in the 800xl The small chip near FREDDIE does all the bank selection.CO25953. One line from FREDDIE , Ras (or is it cas?) goes to this chip, Halt and the bank /processor select lines go into this same chip and ras (cas?) comes out. a pin for each bank. If i remember correctly, refresh also goes into this small chip. It would be quite easy to make an 800xl work just like a 130xe with this chip since Ras (Cas?) is required by ALL dynamic ram.

Some words on GTIA bugs, from Andreas Magenheimer, mailto:magea000@mail.uni-mainz.de :

All of these newer and buggy GTIA`s were built with the "eastern european" XE computers. they were made in China. Although Atari knew about this, they did not change them. so you have to replace them with older XL/XE GTIA chips...

But one more thing to GTIA and Antic chips: All PAL versions of these chips have a color bug, since gr. 11 produces 16 colors, but merely 15 different colors (one color: brown at the beginning and end of the palette is absolutely the same; normally there should be a red tone here !); with gr. 9 you will see 16 shades, but merely 15 different shades (the same as gr. 11, one shade is doubled!).

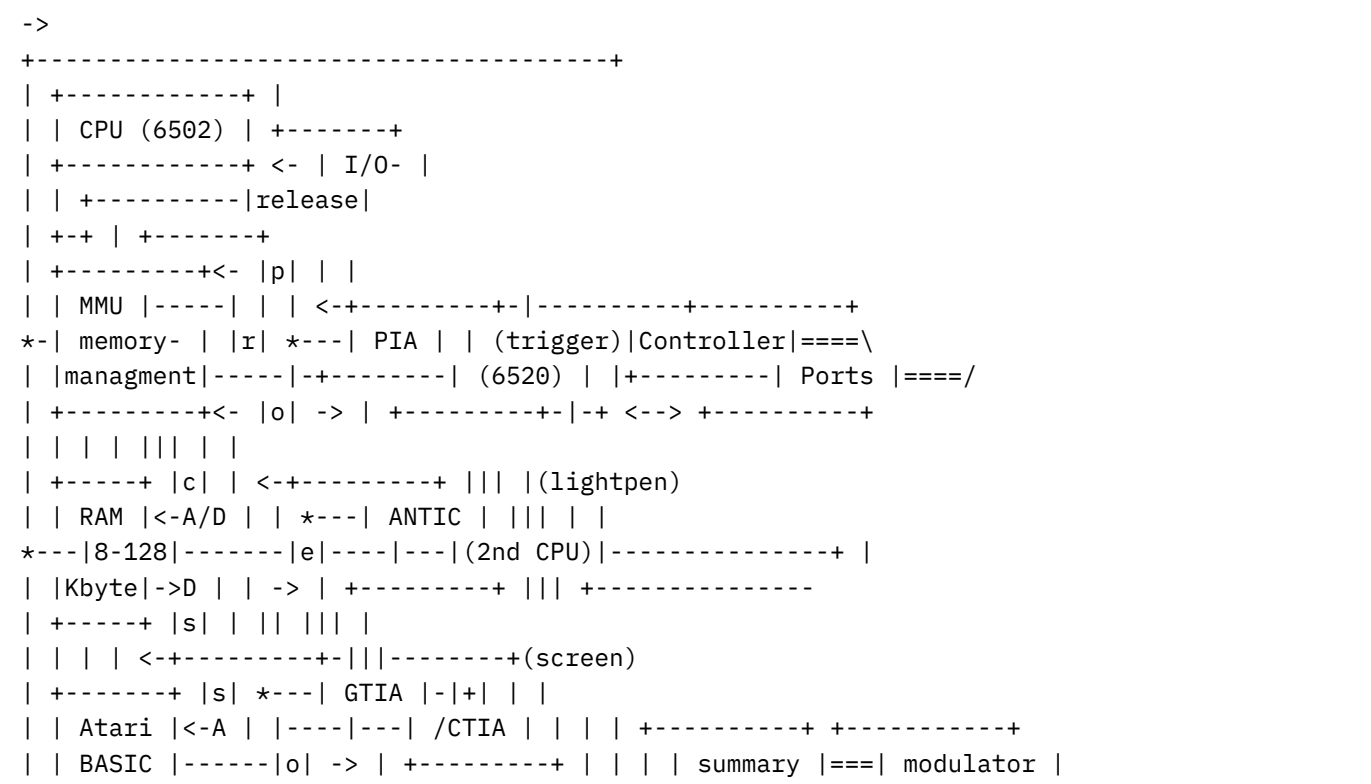
Strange enough, I also found this color bug to appear in PAL Antic chips, there is also the red tone missing (and the brown one doubled !). This color bug appears in all PAL Antic and especially GTIA chips. Atari never fixed it, so you find it inside any GTIA equipped PAL Atari 800 and also the later XL and XE models. Since PAL users have to live with this bug, they sometimes do programs which look absolutely strange on NTSC and vice versa (not to mention the different Herz frame 50/60 hz and higher PAL line resolution/overscan).

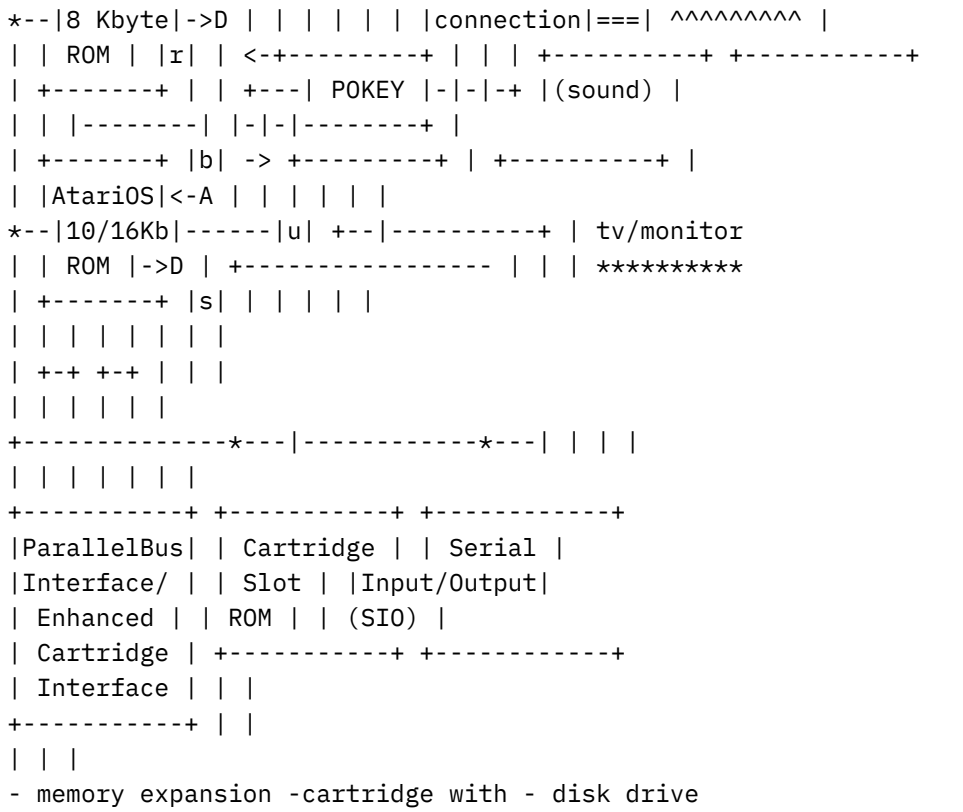
Imagine the following: a PAL GTIA has 15 colors in gr. 11
a NTSC GTIA has 16 colors in gr. 11
a PAL GTIA has 15 shades in gr. 9
a NTSC GTIA has 16 shades in gr. 9

Thus, a combination of gr. 9 and 11 gives:
16x16 = 256 colors on NTSC
15x15 = 225 colors on PAL

And - as said before, the bug seems also to appear with Antic...
Bad luck, we PAL users... Greets - Andreas Magenheimer.

Hardware Arrangement (With thanks to mailto:twh@bigfoot.de (Thomas Havemeister))





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800: 8K, 16K or 48K standard
600XL:16K standard
1200XL/800XL/65XE/800XE/XEGS: 64K standard
130XE:128K standard
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE/European 65XE only

Technical data and schematics for the Antic, GTIA, and POKEY chips are available on Curt Vendel's web site, thanks to permission from Hasbro's Atari Interactive Divisions release of this data. See: http://www.atari-history.com/articles.html

---

Subject: 1.4) How did Atari get it's name?

Graham Thornton, mailto:dangermouse@prodigy.nospam.net types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official

mouthpiece of Atari UK. The article was not attributed to any one person. The words are thiers, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong(r).

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends' solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an

acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into 100% printable ASCII characters, so that the file may be posted or e-mailed anywhere a text message can go. The 8-bit Atari is perfectly capable of UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that is common in the MS-DOS world. This is done to make the file shorter, so it takes up less space on your disk and it takes less time to transfer between computers. The archives contains several 8-bit Atari archivers fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:audioguy@cheerful.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.
DCM specs at: http://home.planet.nl/~ernest/diskcomm.zip

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load
files. Like .xmo, use of .bin is discouraged.

Subject: 9.5) How can I make my commercial boot disk (tape, cart) into a load
file or disk image?

Russ Gilbert, mailto:russg@en.com writes:

The disk image part is a matter of taking a copyable boot
disk and making an atr, xfd, dcm or other disk image type
file out of it, usually for use with an emulator. Before
emulators, the Bob Puff .dcm format was used to
store/archive/retrieve boot disk images.

Almost all commercial software for the A8 is/was copy
protected. For boot disks, this usually involved a large
number of special formatting that couldn't be copied using
ordinary sector copiers. Usually the boot process involved
checking to see if a certain sector error occurred, then
proceeding. If the error did not occur, the disk was a copy
and would not work.

For carts, usually the method of protection was to write to
the cart area of memory and see if the value changed. If the

value changed, the cart program was in RAM, not ROM and would fail to operate.

For tapes, again a fair number of schemes were used. Some varied the speed at which the tape loaded. I'm not familiar with tape protection schemes.

With all software media (cart, tape, disk), there may be program encryption, which must be decrypted before the program can run. This to make more difficult disassembly of the program.

There were/are a number of products to defeat copy protection/allow copying of protected software for the A8. The most common way to defeat copy protection was to disassemble the software and revise sections of code so that the copy protection was defeated. A software with defeated copy protection is called a 'cracked' software. The basic procedure is to understand how cart/tape/disk software initializes, loads and runs. Usually make a file out of the software and 'follow the code', starting with loading of the program, to decryption to the actual running of the program. Today, it is unnecessary to copy original commercial A8 software because it has already been defeated and may be found at a few ftp sites. (Note umich archive has no commercial/non-shareware software.)

Besides 'cracking' software, there were/are hardware devices to copy commercial protected software. The Happy 1050 and the Archiver, and probably other modifications to the 810, or 1050 allowed 'bit image' copying and reproduction of the special formatting that copy protected disks had. Using these archiving disk drives, a copy of the original disk, including all special formatting and the original code is copied, thus making a copy protected copy, not cracked, just like the original.

For carts, copying could involve cracking or again there were/are products to reproduce the cart and simulate a ROM. Or the cart might be copied and burned on the correct type of eprom, to make a plug in cart. 'The Impersonator', the 'Pill' are two cart copy schemes copy the cart to a file, then don't change the code, but use a 'dummy cart' to fool the software into thinking there is a ROM present.

Basic tools for copying, then cracking, carts and disks are a sector editor and disassembler. Carts are usually most easily dumped using a special OS, like Omnimon, to interrupt the cart and dump memory to disk. There are a few pd cart copiers that have the user plug the cart in when the program is running, I don't believe these pd cart copiers are very good or very wise to use.

So, the basic answer to 'how do I make a copy of my copy protected commercial software' is don't bother. Find it on the net.

There is one exception, in that this 'solution' involves a minimum of effort and is relatively safe. I refer to 'Chipmunk' and 'Black Patch' software to make cracked boot disk copy of commercial disks. HOWEVER, even if you use these two commercial archival tools, be sure you write protect your originals, and be careful not to accidentally write to the original disk.

Finally, I'll mention a very modern (I mean 1997) product. The APE Pro system, by Steven Tucker, in the registered version of this shareware allows making disk images called 'Pro' images. APE (Atari Peripheral Emulator) requires a cable, called the SIO2PC cable, that connects the A8 13 pin serial port to a serial port on the IBM PC clone. To make 'Pro' images, a special adapter cable is needed, not just the 'standard' SIO2PC cable. The 'Pro' image can 'capture' the copy protection of an original commercial disk. The 'Pro' image can then be loaded into an A8 using the APE registered version software, thus backing up your original disk software. Note the 'Pro' image will only be of use to person(s) owning registered APE software and 'Pro' adapter cable.

Subject: 9.6) How can I convert my commercial boot tape into a cassette image file?

mailto:ernest@wxs.nl (Ernest R. Schreurs) writes:

For those of you that like ALL classic Atari software, there is now a way to store all software that has been recorded on cassette tapes on the hard disk of your PC. I have written a program that is similar to the SIO2PC utility written by Nick Kennedy. But this one is intended for use with cassette software. You will need the following items:

Any PC equipped with a sound card and about 50 to 100 Megs of free disk space to work with. The sound card should be able to sample sound at a sample rate of 44.100 Hz mono. The sample must be recorded into a .wav file.
You need the wav2cas program to convert the .wav file to a .cas file. The .cas file is a digital cassette image file that only contains the data that is on the cassette tape. Once you have that, you can throw away the .wav file. The .cas files are typically 16 to 64K, so they are relatively small.

To load cassette files into your Atari (i.e. boot a digital cassette image) you do not need a sound card. You do need a SIO2PC cable or similar device. You also need the cas2sio program.

The wav2cas and cas2sio programs should be available from the archives
of Umich by now. They have been put together in one zip file
wav2cas.zip, along with the documentation and the 'C' source code.
You can download it through the web interface at the URL
http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/wav2cas.zip
Note the capital in Emulators and in Peripherals.
Thanks to William Kendrick for helping me get it uploaded there!
You can also try the gopher stuff:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Peripherals/

Steven Tucker, the author of APE, has added support for this file
format as of version 1.15 of APE. It looks real neat, so try that out
too! Thanks to Steven for adding a nice user interface for these
cassette images. He did a nice job. I am hoping other using are
willing to write some programs to get more enjoyment out of this
underrated storage medium.

My stuff is available totally free for personal use, so I hope you
enjoy it. Read the docs about the conditions.

Keep those XL's/XE's humming.
If you have any questions feel free to E-mail me: mailto:ernest@wxs.nl

---

Subject: 10.1) What kinds of monitors can I use with my Atari?

In general, you either need a Composite Video monitor, or a standard TV.

Television:
You'll need a video cable (not detachable on the 400/800), and a TV Switch
Box. Used with VHF Channel 2 or 3.

Monitor:
The 8-bit Atari produces a color Composite Video signal, plus
separate chroma (color) and luminance (brightness) signals which the best
composite video monitors can take advantage of. Popular examples of such
monitors include the family of monitors produced by Commodore.

Gotcha's:

-the 400 and North American 600XL lack a monitor port entirely. They can only
be used with a TV.

-the XE Game System provides an RCA-style jack in place of the Monitor port;
so it provides Composite Video but lacks separate chroma\luma signals

-the 600XL, 800XL and 1200XL lack separate chroma signal (can be added via
hardware modification)

-the XEP80 Interface Module produces a monochrome Composite Video signal via
an RCA-style jack. This higher-resolution signal produces crisp, clear 80
column text on 80-column monochrome composite video monitors.

The pinout of the Monitor port is in the pinout section of this FAQ list.
The monitor connector on the back of the Atari can be utilized using a

4-pin DIN to RCA converter. You don't need to build a separate cable.

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

"The best monitor for an Atari 8 bit that is readily available today would be a television with an S-video input---these tend to be large and high-quality, so the s-video input is the deciding factor there. You'll have to build the cable yourself, and if you have an XL you'll want to do the Super Video upgrade that Ben Poehland published in Atari Classics a few years ago---this puts the chroma signal back on the pin that it should be and cleans up the video signal enormously. It's really more of a fix than an upgrade.

I use a commodore split-video monitor. They work great and are cheap-to-reasonable when you can find them."

mailto:bryede@emi.net (Bryan Edewaard) writes:

"Yes, the best choices are monitors that support "Separated Video" (sometimes called Commodore video on Commodore monitors), or S-Video. These monitors have separate color and luminance video inputs, which give a sharper picture without cross-color artifacts - such as the colored fringes on text when viewed on a TV (although some games use these artifacts to get additional colors). If you have an XL computer, then it needs an upgrade to support these monitors due to the omission of chroma from the monitor port. the 800 and XE computers don't have this problem.

The 2nd best choice is a TV or monitor that has a "Composite Video" (usually called just "Video" or "Aux") input. This is a signal that has the color and luminance information combined into one signal. The picture will be a little less sharp, but still much better than using the "Channel 3" output.

>Where might I find one?

I've seen them a flea markets, garage sales, swap meets, ham fests, and in newsgroups like this one. Plus, many new TV's support S-Video and Composite video inputs.

>What are the advantages of using one of these rather than a TV?

Well, it's all a matter of how many stages the signal must go through.

1. The Atari generates video as a color signal and a brightness (luminance) signal. These are passed to the monitor port as Chroma and Luma signals (XL's have no Chroma output from the factory).

2. The signals are mixed together to make a standard video signal which is also passed to the monitor port as Composite Video.

3. Then the mixed video signal (along with audio) goes through the process of being "modulated" into a TV radio signal (channel 3 or 4). This step involves removing high frequencies from the video (blurring it) and sending it to the TV in a fragile broadcast form that's

suseptable to all kinds of interference. Then the TV must (1) extract the video signal from the radio signal, (2) separate the Chroma and Luma components as best it can, then (3) divide the Chroma in R, G, and B. Any of these steps that you can eliminate will help your picture.

>Are there any other composite video monitors that anyone would recommend
>(and where might I find one)?

Maybe the 8-bit FAQ mentions these monitors. The most common one is probably the Commodore 1702 which has a very good picture and is quite reliable.

If you plan to use an XL (which I do), upgrading the video circuitry makes as big a difference as what monitor you choose. Ben Poehland has some excellent articles in Atari Classics magazines for improving the quality of the XL's video, as well as restoring the missing Chroma output."

Lonnie McClure mailto:lmcclure@ibm.net has the last word on Commodore monitors:

Comodore models: 1701, 1702, 1802, CM-141, 1080, 2002, 1902, 1902A*, 1084**, 1084S**.

* The 1902A used a DIN connector for chroma/luma, which makes cabling a bit more of a problem. The composite and audio connectors are standard RCA jacks, however.

** The 1084 and 1084S had more than one version. Some used the a DIN connector for chroma/luma connections, like the 1902A, while some used standard RCA jacks.

The 1902 and 1902A are very different in appearance. The original 1902 shares the same slightly rounded front case design as the 1080 and 2002, while the 1902A is has a rather square case design, and was manufactured by Magnavox (as were some of the 1084 and 1084S versions).

Jerry Jessop, mailto:jjessop1@home.com explains why French Ataris produce fewer colors:

"I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the expense. The largest SECAM market is not France but the Soviet Union (former) and in 80-84 sales of these items there were not possible."

Subject: 10.2) What is the difference between NTSC and PAL machines?

Software written for NTSC (North America) will always work on PAL machines, but software designed on PAL machines (Europe) won't necessarily work on NTSC machines.

Wayne Booth, mailto:trek@ihgp15.ih.att.com writes:

The differences with PAL and NTSC have to do with the number of lines displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they refresh the screen 50 times a second doing 1/2 the lines each refresh so they effectively repaint the screen 25 times a second. NTSC is 525 lines/screen with a 60 times a second refresh - again only half the lines each refresh so a 30 times a second frame rate. This would change the amount of time available during vertical sync pulse, and the number of lines that need to be redrawn each time.

Graham Thornton, mailto:nero@chicagonet.net adds:

I use both a real PAL Atari 800 and a PAL-ANTIC 1200XL here in the US.

Replacing the ANTIC chip with a PAL version changes the screen refresh rate to 50Hz which allows most of the PAL-only European software to run. Your system will still report itself as a NTSC machine, unless you change the ROM (see the Nir Dary upgrade), but most software doesn't care.

But James Bradford responds: (7/19/00)
Not true. the PAL Flag is in the GTIA chip, not in ROM. The NTSC and PAL roms are the same. Only Rev A ROM was had different versions. I am not sure if Rev B ROMs had seperate versions.

Graham continues:
The one problem you might run into is your monitor. Replacing the ANTIC will mean your North-American Atari is now generating an NTSC signal at 50Hz, instead of the usual 60Hz. Some people will tell you that modern TVs and monitors don't care but that isn't actually true. My brand-new Sony Trinitron 15" colour TV/monitor goes bezerk with the upgraded 1200XL, but my 15-year old 10" Texas Instruments color monitor (designed for the TI-99/4A) is fine.

You can also use real European equipment here in North America, provided that you have a PAL-compatible TV/monitor. The frequency of the power system is irrelevant, as I use my 800 with a 110V/60Hz 1050 power supply.

Subject: 10.3) Is the software for the Atari 8-bit computers "TV-standard dependent?"

{some PAL demos flicker, or won't run at all on NTSC machines}

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

This is because PAL machines have a vertical refresh frequency of 50hz (NTSC use 60hz) which translates into more vertical blanking time for demos and other computation-intensive graphics software. So PAL demos

that won't work on NTSC machines are usually returning from a VBI
(vertical blanking interrupt) too late. Some also attempt to use more
vertical resolution ("longer" display lists) than an NTSC display can
handle.

mailto:thor@math.tu-berlin.de (Thomas Richter) adds:

Yes, it is. Mostly because the frequency of the vertical blank interrupt
is different (60Hz for NTSC, 50Hz for PAL). The old OS A was not clever enough
to notice the difference, so all system timings like the keyboard auto-repeat
function depend on the TV system. These parts of the OS have been corrected
with OSB and the XL versions of the OS. However, as most games install a
VBI, their timing does still depend on the frequency -> they will run
slightly slower for PAL versions.

Another point is that the popular pseudo-colors used in the Antic-F
(Graphics 8) mode are not colorful at all when displayed on a PAL TV, because
of differences in the color encoding for the TV. The schematics of
the Xl computers include however a hack how to change the PAL version to
the NTSC version (the PAL versions include two crystals, one with 5/4th of
the frequency of the other. One is used for the system clock, the other for
the color clock), but I never dared to apply it.

Subject: 10.4) What are the PAL, NTSC and SECAM video broadcast standards?

Here are several links on the topic.

http://www.ee.washington.edu/conselec/CE/kuhn/ntsc/95x4.htm
http://www.alkenmrs.com/video/standards.html

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

Ice-T XE v2.72 (128K XL/XE) or Ice-T 800 v1.1 (48K)
shareware by Itay Chamiel, mailto:itayc@hotmail.com
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.72) or No (1.1)
Backscroll buffer: Yes--8 screens (2.72) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.72) or No (1.1)
Summary: Outstanding flicker-free high-speed VT100 emulation.Recommended!
http://www.cs.huji.ac.il/~itayc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; best for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Only option combining VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Only option for VT100 emulation on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)

Konrad Kokoszkiewicz, mailto:draco@mi.com.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo, mailto:ssilicon@lax.net sums it up this way:
So a basic rule of themb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the
backwards compatible 360KB modes that most 1.2MB drives offer.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Apparently 2.07 is buggy.
Anadisk 2.06 is available at: http://ch.twi.tudelft.nl/~sidney/atari/

Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first

portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (Russ Gilbert)

Q: How do I connect two cmputers using a null modem cable?

A: You need a term program and RS 232 ports on both
computers. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 baud, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25 pin
port. 25 pin #2 goes to Atari #4 (XMT to RCV), 25 pin
#3 goes to #3 on Atari (RCV to XMT) and #5 of 850 goes
to #7 of 25 pin (GND to GND).

The right hand pin on the 'long' side of a female 'D'
connector is #1. There are 13 holes on this 'long'
side, 12 holes on the 'short' side. The numbers go
to the left 1 to 13 then #14 is under #1 and left again
so that #25 is under #13.

Most term programs allow a null connection, without a
carrier detect. Notably, 'Express 850' does not. I have
only used 'Procomm 2.4.3' (the last shareware version of
Procomm) on the PC and Bob Term on the Atari, but other
term programs may work.

To check your null modem connection, start both PC and
Atari term programs, set baud to 2400 or 4800 on both
computers. No parity, 8 data bits, 1 stop bit on the PC.
Be sure to use the correct COM port on the PC. Go to
'terminal' mode and you should now be able to type on
either computer and see it on the other screen. To
accomplish a file transfer, use Y-modem probably from
Bob Term, rather than X-modem. X-modem will often append
bytes to a file transfer, an undesirable event. There is
also a very nice Z-modem recieve program for the Atari,
called AtarZmodem by Larry Black for the Atari.

A convenient way to make a null modem cable, up to about
30 feet long, is to use two female DB25 connectors
(Radio Shack) some three or more conductor cable. Using
the two DB25 female connectors allows unplugging your
modems and plugging in the null modem cable into the two
modem cables. This also avoids the confusion of

variations in the computer ports. Most computers connect into the modem end via a standard RS232 DB25 connection. With this both ends 25 pin cable, you would cross pins 2 and 3 and connect the #7s together to make a null modem cable.

The SIO port on the Atari cannot be used directly. An 850, P:R: connection, MIO, Black Box or similar device that provides an RS232 port must be used.

Following are pin assignments for a DB25 pin RS 232 C port.
1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

For higher speed connections, above 4800 or 9600, you need the flow control lines and Atari term software that has flow control built in. You also need an MIO or Black Box, which uses the PBI (parallel bus). A high speed cable would need not only XMT, RCV, and GND, but also flow control lines. I suggest a commercial null modem from computer store to ensure correct lines. A null modem is a small adapter with the correct lines already crossed. I don't know how to correctly connect the CTS, RTS, DTR, DSR, CRX lines for a high speed null modem. With a null modem, you just plug it into the 25 pin connectors of the two modem cables you might already have connected to your Atari and PC or Mac. You may need a straight thru 25 pin gender changer also.

Following is in this FAQ elsewhere, but I summarize here: (Figure out or look for pin numbers on the ports.) Note that these are pin assignments, and NOT null modem connections with the XMT, RCV crossed and GND straight thru.

Atari 8-bit PC AT 25 PC AT 9 pin
---
1. DTR 20 4*
2. CRX 8 1*
3. XMT 2 3
4. RCV 3 2*
5. GND 7 5
6. DSR 6 6
7. RTS 4 7
8. CTS 5 8

9. No connect? shield RI
22 RI

Note: * above indicates the difference between an AT 9 pin
and a Atari 8-bit 9 pin cable connector. eg. If you check
continuity from pin 3 of 25 pin end and it goes to pin
4 of nine pin end, you have an Atari serial cable. If pin
3 of 25 pin goes to pin 2 of 9 pin end, you have a PC
serial cable.
(updated 3/1/99)
(DTE = Data Terminal Equipment ie. your computer.
DCE = Data Communications Equipment ie. your modem.)

Subject: 11.4) What is SIO2PC?

From the SIO2PC home page, written by Nick Kennedy:

SIO2PC is a hardware & software package interfacing the 8-bit Atari to PC
compatible computers.

The original idea was to have the PC emulate Atari disk drives so Atari
programs could be stored on the PC's hard (or floppy) drives. It turned out to
be quite successful. About 95% of my work was in the software, but a hardware
device to convert logic levels was also necessary. This device is now commonly
referred to as an SIO2PC cable.

Features:

Emulates 1 to 4 Atari disk drives

Store your Atari files on PC hard or floppy drives

Boot from the PC, real drive not needed to start-up

No software or drivers required for the Atari;
no conflicts: use your favorite DOS

Twice as fast as an Atari 810 drive and more reliable

Co-exists with real drives in the Atari daisy chain

Compatible down to the hardware level: use sector copiers, etc.

Print-Thru captures Atari print-out and routes to PC's printer

Convert Atari files to PC files and vice versa

1050-2-PC version connects PC directly to Atari disk drive

Nick Kennedy
mailto:nkennedy@cswnet.com
http://www.cswnet.com/~nkennedy/

Another source for building SIO2PC cables is Clarence Dyson's page at
http://www.redshift.com/~cdyson/atari.html

Subject: 12.1) What are the Atari 810, 1050, and XF551 Disk Drives?

==> Atari 810 --- a 5.25" floppy disk drive
The least common denominator for the Atari. Single-Sided, Single-Density:
40 tracks x 18 sectors/track x 128 byte/sector = 90K capacity
19.2Kbps transfer rate. 288RPM
Shipped with DOS I (very early) or DOS 2.0S

Third-party upgrades for the 810:
810 Archiver -- copy many copy-protected programs
Happy 810 -- Happy Backup, Warp Speed 52Kbps, 18 sector buffer
810 Fast Chip by Binary 10%-40% faster
810 Turbo by Neanderthal Computer Things (NCT) -- double-density
see: http://www.qnet.com/~dons/810T.html

==> Atari 1050 --- a 5.25" floppy disk drive
Same as the 810, plus "Enhanced"/"Dual" Density capability:
Single-Sided, Single-Density, 810 compatible
Single-Sided, Enhanced-Density:
40 tracks x 26 sectors/track x 128 bytes/sector = 128K capacity
19.2Kbps transfer rate. 288RPM
Shipped with DOS 2.0S, DOS 3, or DOS 2.5
DIP switches: Black & white left: Drive 1
Black right, white left: Drive 2
Black left, white right: Drive 3
Black & white right: Drive 4
Third-party upgrades for the 1050:
ICD US Doubler SS SD/ED/DD UltraSpeed (US) 54Kbps, sector skewing
Happy 1050 SS SD/ED/DD Warp Speed 52Kbps, 36 sector buffer,
Happy Backup. also read/write 180K 5.25" MS-DOS floppies
CSS Super Archiver SS SD/ED/DD UltraSpeed 54Kbps (US Doubler clone)
CSS Super Archiver II SS SD/ED/DD UltraSpeed 54Kbps (US Doubler clone)
Cheer-Up 1050 SS SD/ED/DD Warp Speed 52Kbps (Happy clone)
Speedy 1050 SS SD/ED/DD Warp Speed 55-57Kbps (Happy clone)
Super Speedy 1050 SS SD/ED/DD Warp Speed 55-57Kbps (Happy clone),w/180K RAM
SuperMax 1050 SS SD/ED/DD UltraSpeed 52Kbps (US Doubler clone)
Lazer 1050 SS SD/ED/DD Warp Speed and UltraSpeed 54Kbps

Rich Mier professes:
You've been plugging and unplugging the SIO cable with the 1050 power pack
plugged in, right? That's a no-no. Most of the time it's Okay, but about 1
in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right,
rear of the main board. A 14 pin DIL chip. Actually it is an array of 5
transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be
ON on the CPU. The problem has to do with the secondary winding of the Power
Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do

it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it
'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it
won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

==> Atari XF551 --- a 5.25" floppy disk drive
Single-Sided, Single-Density, 810 compatible
Single-Sided, Enhanced-Density, 1050 compatible
Single-Sided, Double-Density:
80 tracks x 18 sectors/track x 256 bytes/sector = 360K capacity
Writes "backwards" to the second side of the disk, rendering it incompatible
with existing third-party 180K formats on the reverse side of the disk.
High speed 38400 bps burst mode usable only with SpartaDOS X, SuperDOS
5.1, TurboDOS, DOS XE, and patched SpartaDOS 3.2.
Rotaton rate: 300RPM.
Shipped with DOS 2.5 or DOS XE.
DIP switches: Both dips down: Drive 1
Left down, right up: Drive 2
Left up, Right down: Drive 3
Left and Right up: Drive 4
Chinon-built XF551-cannot read/write/format backside if no timing hole
Mitsumi-built XF551--can read/write backside if to timing hole, if formatted
Third-party upgrades for the XF551:
CSS XF Single Drive Upgrade--3.5", 720K floppy drive replacement
also read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFsingdrup.htm
CSS XF Dual Drive Upgrade--add 3.5" drive w/o losing the 5.25" drive
also read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFdualdrup.htm
CSS XF551 Enhancer--overcomes sensor for index hole, create flippy disks
see http://www.nleaudio.com/css/products/XF551enh.htm
CSS XF Update--replace drive OS, adds UltraSpeed
see http://www.nleaudio.com/css/products/XFupdate.htm

Subject: 12.4) What should I know about modems and the Atari?

Thanks to Bob Puff and Clay Halliwell for helping me with this section.
But I'm still not real confident about the accuracy here. I'd love for
anyone to help me fix up this section!

There are three types of modem protocols: modulation protocols, error
correction protocols, and compression protocols. The international

standards for these protocols are laid down by the branch of the United Nations known as the ITU-TSS (formerly the CCITT). ITU standards are known by their "V-Dot" names. They're only names, don't try to apply any meaning to the names.

Modulation protocol standards, the major ones
(bits per second)
300 bps - V.21 (103J is used instead in the USA)
1200 bps - V.22 (212A is used instead in the USA)
2400 bps - V.22bis
9600 bps - V.32
14.4 Kbps - V.32bis
28.8 Kbps - V.34

Error Correction standard:
V.42 - requires either software or hardware flow control

Compression standard:
V.42bis - requires V.42, and hardware flow control.

If your modem is capable of V.42bis compression, set your communications software to enable hardware flow control. If your terminal interface allows you to set the terminal<->modem (DTE) and modem<->modem (DCE) baud rates separately, you should set the DTE rate to the maximum allowed. If the DTE and DCE cannot be set separately, set the terminal baud rate at four times the maximum actual data rate of your modem (V.42bis achieves a compression ratio of up to 4:1). Examples: If a V.22bis/V.42bis modem is used, set the terminal for 9600 baud. If a V.32/V.42bis modem is used, set the terminal for 38400 baud. If a V.32bis/V.42bis modem is used, set the terminal for 57600 baud.

Let's define a "high-speed" modem as a modem capable of V.42bis compression. (Some 2400 bps modems, and all modems faster than that)

Using high-speed modems on the Atari

Unless you're using a CSS Black Box or a patched MIO, the 8-bit Atari RS232 interfaces do not support hardware flow control. (I have heard that the P:R: Connection does too, but it can't be controlled in software.) So we must send the modem a command to tell the modem not to use it. Using a Hayes-compatible modem, the modem command AT &K4 will enable software flow control, and disable hardware flow control. AT &K0 will disable all flow control.

The MIO patch, HyperSpeed by Len Spencer, is available at:
http://members.aol.com/lenspencer/atari8.htm

Question. Why does my modem report V.42bis is used even when my terminal it set for the same speed as my modem?

Cause the modem will do what you tell it. You've configged it to talk at the highest speed, using LAP/M, and compression. Even if you connect modem to modem at 14.4k, you can be talking to the modem at 300 baud, and it will still

use everything. You'll undoubtedly drop bytes, but hey...

Question. Why does V.42bis compression appear to function after I have sent the modem the AT &K4 or AT &K0 commands? And knowing the Atari doesn't support hardware flow control?

Compression doesn't have to have flow control to work. Same as above - its just an added step that the data goes through. Note that if the modem's input buffer is small, you can overrun it easily if you send it data faster than it can digest and send. That's why you -really should- be using flow control with compression... But it's not a necessity.

Question. Why does V.42 error correction appear to work even when I have disabled flow control with the AT &K0 command?

Question. Why don't I have problems performing binary downloads when I have software flow control enabled? (flow control characters could appear in data stream accidentally)

Depends on the protocol. Zmodem accounts for spurious XON/XOFFs. Xmodem and Ymodem don't. Also, you are able to digest the data as fast as the modem is giving it to you, hence no flow control is happening. I suspect it would be a different case if you were uploading using a streaming protocol like Ymodem G.

More tips, from Clay Halliwell:
On 11 Feb 1996, mgfrank@acsu.buffalo.edu (Marc G. Frank) said:

> I'm having problems getting a modem attached to my Atari 850 to
> communicate at 9600 baud. When I set my communications program to 2400
> baud, everything works fine. However, when I set it to 9600 baud, the
> modem echoes my characters but doesn't act on them. That is, at 2400,

The problem with the 850 is that some of them (like mine) don't produce a PERFECT 9600 baud signal. As a result modems can't train on it, and while they will echo characters back, for some nitpicky reason they won't pick up on the "AT" attention code.

The solution is to do all your dialing at 2400 baud, but set the S37 register to force the modem to try to connect at 9600. Then switch your Atari to 9600 after connecting.

Jon Melbo responded to me in 1997:
On Fri, 21 Mar 1997 11:06:11 -0600, "Michael Current"
<mcurrent@carleton.edu> wrote:

>I have a Zoom 2400bps V.42bis modem, connected through a P:R:Connection. I
>need to do the
>at&k4 no matter what I'm dialing into, and no matter what comm program I'm
>running.
>
>Nobody's ever really been able to explain it to me, but I know it has helped a
>few other people. Try it!

What &K4 does is select XON/XOFF flow control. Apparently, all/most atari serial interfaces or at least R: handler software does not support hardware (CTS/RTS) handshaking (selected on the modem via &K3 which is also a default). Anyway, that's why the &K4 setting helps a lot.

Glenn Saunders responded to other writing of Jon's, 4/5/97:
: 28.8 CARRIER connects are possible BB or no, it's just that there is
: no point in having your modem do data faster than your puter can.

It simplifies modem configuration to let the modems connect at their native speeds.

: Right! But you should never have your DCE to DCE speed exceed your
: DTE to DCE speed. Never, unless you like errors and strange behavior.
: With a BB, one should use CTS/RTS flow control, and force the modem to
: operate at a maximum of 19.2 PERIOD (this means disable compression).

It doesn't really matter. CTS/RTS can throttle the I/O down as much as it needs to. The faster modem will wait for I/O without any complaints. Disabling compression isn't a good idea because it will disable it for ALL calls including 9600 or 14.4 users in which it could do some good even on an 8-bit BBS. Software flow control is pretty much dead in telecommunication, and has been dead as long as data compression has been standard since the stop and start commands take way too long to register that way.

: If using some other serial interface, I would use software flow
: control, disable data compression on the modem, force the modem to a
: max speed of 9600bps, and experiment with error correction. Does

This combination is deadly for most modern users unless they degrade their modem via reconfiguration. And if users have to do this, odds are they will stay away rather than futz with AT settings to get a reliable connect. That's why I think the MIO essentially died as a viable BBS interface when 14.4s became standard. They won't work well unless the "mythical" hardware flow control of the thing is enabled in some way.

An explanation of XON/XOFF from Eric Sokolowsky, 4/11/97:

I looked in my modem manual, and the at&k4 command enables XON/XOFF flow control, which is a form of software flow control. As I understand it, when a XOFF is sent by the receiving end of a line, the sending end holds off sending for a little while to give the receiving end a chance to catch up. When the receiving end catches up, it can send a XON which tells the sending end to continue sending. Using this should reduce the liklihood of dropped characters. It's not as good as hardware (RTS/CTS -- check out the FC light on most high-speed external modems on fast transfers) flow control (enabled by default or the at&k3 command), but it's good enough for the Atari, which as I understand, doesn't normally allow hardware flow control, unless using such a device as the Black Box.

to which Robert Ely responded:

Just a quick addition. If you are using a modem at 9600bps or faster, don't use xon/xoff, use the RTS/CTS. Since you can do this with the MI/O and BlackBox, use it for all it's worth. If you are on an 850 or P:R:Connection, you won't be able to deal with it and probably won't be going at or above 9600bps anyway.

Subject: 12.5) What is the Atari XEP80 Interface Module?

This section written by: mailto:raukamp@dame.de (Thomas Raukamp)

Since the development of the Atari 8-bit line of computers in 1979, users wanted better text displays than the default 40x24. There has been some attempts to satisfy this need, like the Austin-Franklin board or the Ace 80/80xl cartridge. For more informations about these modifications read The Atari 8-bit Hardware Upgrade FAQ from mailto:david_p@storm.ca (David A. Paterson)

The Atari XEP80 Interface Module is Atari's entry to the 80 column field. It lets a XL, XE, 400 or 800 computer system display a full 80 columns across your monitor screen. The XEP80 provides a 256-character wide by 25-line display window. Up to 80 characters are displayed horizontally at once, and you can scroll horizontally all the way to the 256th character, depending on the application you're running. The XEP80 is connected to your system via a joystick port.

The XEP80 Module interprets commands from the computer for screen display or output to a printer. The module is supplied with an industry-standard 8-bit parallel port so you can connect a parallel printer to your Atari 8-bit (I even use a HP LaserJet IV on my 130XE ;)).

All programs that use the standard screen call (E:) should be compatible with the XEP80 Module. The software provided by Atari supports a 320x200 graphics mode - this mode only support direct bit images. Note that you can't use all of the standard graphic capabilities of the Atari anymore.

Although Atari recommends a monochrome monitor for usage with the XEP80, it runs fine with any type of composite monitor. The output looks great on my Commodore 1084 for example.

Along with the module comes a software-package containing an AUTORUN.SYS file, which is the XEP80 handler. If you want to use the module with an application that is compatible with the XEP80, which has it's own AUTORUN.SYS file, you can append the application's AUTORUN.SYS on the module's AUTORUN.SYS.

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g and 3.2gx are disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS 3.3a and 3.3b were rewritten by Stephen J. Carden for use with BBS Express PRO!. SpartaDOS 3.3c is produced on a 16K ROM cartridge from Video 61.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2g)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Another popular, powerful DOS is BW-DOS, freeware by Jiri Bernasek.
BW-DOS 1.30 and all other versions are available via:
http://atari.boss.com.pl/files

Carolyn Hoglin, mailto:choglin@usa.net adds:
I didn't see TOP-DOS mentioned anywhere. This superior DOS was written by R. K. Bennett of Eclipse Software in Sunnyvale, CA. It was based on Atari DOS, but with many, many more features. It fully supports my double-density, double-sided Astra drives, automatically sensing the proper density and sidedness of both drives 1 and 2. (MYDOS only seemed to do that on drive 1.) Also supported are large ramdisks for Axlon, Mosaic, etc. The latest version was TOP-DOS 1.5+, which came with an excellent manual explaining how to use its powerful capabilities.

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Home Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Home Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs

600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI (Europe: includes ECI)
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missile Command, detach keybd

XF521 -5.25" floppy drive - 1050 compatible, in XE style
XF351 -a 3.5" drive.
XC35 -an XF551 with a 3.5" mechanism
XTM201 -non-impact printer
XTC201 -XE Thermal Color Printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

Thanks to Matthias Belitz, mailto:matz@kawo2.rwth-aachen.de for the European data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have.

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in voltamps or watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are

entirely usable, and often preferable because such supplies run cooler
and last longer.

Direct Current:
Power (in watts) = current (in amps) * voltage (in volts)

Alternating Current:
Apparent Power (in voltamps) = current (in amps) * voltage (in volts)
Effective/True Power (in watts) = current (in amps) * voltage (in volts)
* (cosine of the angle of lag)

Subject: 13.5) What BBS software can be used on the Atari?

This section mostly by mailto:winston@merk.com (Winston Smith)
Credit for AMIS to MACE by Steven Sturza, mailto:cordata@ameritech.net

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
The AMIS BBS was written in BASIC by people from the
Michigan Atari Computer Enthusiasts. It included designs for a ring-detector.
You needed a sector editor and had to allocate message space by hand, hex byte
by hex byte.

Steven Sturza adds:
The AMIS BBS was written by people from the Michigan Atari Computer
Enthusiasts.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that

performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

o Carina BBS -- a shareware product of Shadow Software.

o BBS Express! Professional -- a product of Video 61, www.atarisales.com

o OASIS IV -- a product of ???

o Forem-XE Pro -- by Len Spencer. http://members.aol.com/lenspencer/

Subject: 13.6) What versions of Atari BASIC or the CTIA/GTIA chip do I have?

Atari BASIC:

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Freddy Offenga, mailto:F.Offenga@student.kun.nl adds:

there's another good answer (IMO):

You can also take a look at the part numbers on the IC's inside your Atari and compare them with the numbers from the following table:

Part# Version
~~~~~~~~~~~~~~~~~~~~ ~~~~~~~~
CO12402 + CO14502 A
CO60302A B
CO24947A C

On versions A, B, and C, Greg Miller writes:

"Rev A had a number of bugs, not just the commonly described crash bug. Rev B fixed most (maybe all, I don't remember) of these, but in the process, they added a new bug. You see, the crashes were caused by a bug in one of OSS's memory move routines. When the bug was fixed, the fix mistakenly applied to a routine that actually worked in Rev A, causing the new lockup problem.

Rev C differs in only a few bytes. AFAIK, the only change was to remove the alteration made to the routine that was broken by Rev B.

You can get more details from the annotated source listing published by Compute! books. Bill Wilkinson described many of the problems in detail.
~~~~~~~~~~~~~~~~~~~~

He also talked about it in his column in Compute! magazine."

Wally Lang adds:

--- Warner's Atari issued Rev B in two formats:
(1) As a built-in Basic on 600XL and 800XL computers.
(2) As a special request order item for 400/800 and 1200XL computers.

--- Tramiel's Atari issued Rev C in both formats for XE series computers and ALL previous Atari 8-Bit Computers.

CTIA or GTIA installed?

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

Clay Halliwell, mailto:earl.halliwell@dyess.af.mil provides this tidbit:

A bit of trivia: CTIA 400/800s artifacted in blue/green, GTIA 400/800s artifacted in green/blue, and all XL/XEs artifact in red/blue.

Subject: 13.7) Which versions of the Operating System (OS) are there?

This section also kept at http://www.student.kun.nl/f.offenga/osroms.txt

Atari 8-bit Operating Systems

2	XL/XE	05/10/1983	0x1f9cd270	CO61598B
3	800XE	03/01/1985	0x29f133f7	C300717
4	XEGS	05/07/1987	0x1eaf4002	C101687
~~~~~~~~~~~~~~~~~~

(?) This information is missing. If someone can supply this info,
please write me an e-mail.

NOTES:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).
The 1200XL contains two ROMs for the OS (8k each), XL/XE's use a single
16k ROM and the 16k XEGS OS is stored in a 32k ROM (together with 8k
BASIC and 8k for Missile Command).

Origins of ROM information
~~~~~~~~~~~~~~~~~~~~~~~~~~
400/800 rev.A NTSC Could exist, since the PAL version exists and
rev.A is mentioned in the rev.B source code.
400/800 rev.A PAL All info found in two Atari 400's and Atari 800
ROM module CX801.P
400/800 rev.B NTSC Information from a ROM dump and the rev.B source
listing. The part numbers were listed in the
catalog from 'Best Electronics'. According to
'Mapping the Atari' rev.B ROMs have a 'B' at the
end of the part number, therefore I figure these
part numbers are from rev.B.
400/800 rev.B PAL Could exist, since the NTSC version exists and
there's some conditional PAL/NTSC assembly in
the rev.B source code
1200XL rev.10 PAL/NTSC All info found in an Atari 1200XL. The XL/XE
rev.2 source code refers to it as rev.10.
'Best Electronics' calls it rev.A.
1200XL rev.11 PAL/NTSC Refered to rev.11 by the XL/XE source code.
'Best Electronics' calls it rev.B.
XL/XE rev.1 All info found in an Atari 600XL
XL/XE rev.2 All info found in an Atari 800XL
XL/XE rev.3 All info found in an 800XE
XL/XE rev.4 All info found in an Atari XE Game System

O.S. Authors and dates
~~~~~~~~~~~~~~~~~~~~~~
The following info is from the Atari XL/XE rev.2 source code.

Revision A (400/800)
D.Crane / A.Miller / L.Kaplan / R.Whitehead

Revision B (400/800)
Fix several problems.
M.Mahar / R.S.Scheiman

Revision 10 (1200XL)
Support 1200XL, add new features.
H.Stewart / L.Winner / R.S.Scheiman /
Y.M.Chen / M.W.Colburn 10/26/82

Revision 11 (1200XL)
Fix several problems.
R.S.Scheiman 12/23/82

Revision 1 (600XL/800XL)
Support PBI and on-board BASIC.
R.S.Scheiman / R.K.Nordin / Y.M.Chen 03/11/83

Revision 2 (600XL/800XL)
Fix several problems.
R.S.Scheiman 05/10/83
Bring closer to coding standard (object unchanged)
R.K.Nordin 11/01/83

Vapour-ware
~~~~~~~~~~~
The following OS roms originate from rare Atari 8-bit systems.
Since I don't own any of these (unfortunately), I don't have much
information about these roms. Who can help me?

I've got two 16K rom dumps from the 1450XLD. Both ID's are rev.3.
The first dated 3/23/1984 comes from the 'Pooldisk Too' CD-ROM
(filename: 1540os3.v0) and the second dated 6/21/1984 was send to
me by Nir Dary (filename: os1450.128). Main differences between
these two are in the first 3K ($C000 - $CBFF).

The XL/XE OS rev.3B is from an Atari from Arabia. It's probably based
on rev.3. There are changes in the fonts (Arab characters) and several
patches in the code. More info at:
http://www.savetz.com/vintagecomputers/arabic65xe/

Rev. Found in Size CRC-32 Date
~~~~ ~~~~~~~~ ~~~~~ ~~~~~~~~~~ ~~~~~~~~~~

Special thanks to Nir Dary for the rev.2 source code, rom dumps and
the 1200XL. It's in good hands.

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

contributors to this section:
mailto:jlodoen@shell.portal.com (Jeff M Lodoen)
mailto:olavese@online.no (Vidar \"Hawk\" Olavesen)
mailto:pmulvey@erols.com (Pat Mulvey)
mailto:stevenposey@usa.net (Steven E. Posey) (Party Quiz controllers descr)

The following games support 4 player head-to-head play. Remember, only the
400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor,
Thorn EMI Soccer, Major League Hockey

The following support 8 players on the 400/800 or 4 on the other computer
models, using the 2 controllers-per-port CX30 Paddle controllers:

Super Breakout, Worms?

The following supports 4 players on all machines, using special 4-button keypad
controllers linked together with RJ-11 jacks (standard phone jacks) to a box
with 2 joystick port connectors.

Party Quiz by Suncom

Subject: 13.13) What programming languages are available for the Atari?

This section also kept at http://www.student.kun.nl/f.offenga/lang13.txt

Revision : 1.3
Date.... : 4/19/1999

==========
!!!! This section is under construction - HELP WANTED !!!!

The goal is to give information about all available languages
for the Atari 8-bit computer. This information will include:
title, last version, author, date and a short description.
It would also be nice to know how to get it and where to get
more information (like reference cards, reviews and such).

Freddy Offenga, mailto: F.Offenga@student.kun.nl
==========

There are quite a lot! To get some structure in this section it's
divided into the following categories;

a) ASSEMBLER
b) BASIC
c) C
d) PASCAL
e) LISP
f) FORTH
g) PILOT
h) LOGO
i) All the rest

The following format is used:

- Language titel (medium)
version, year : version, year
author/company : author/company
available..... : where/how to get it
package..... : programs, documentation
features..... : main features
Description.

The question marks (?) indicate that more information is
required about that topic.

Definitions:
umich University of Michigan Atari archive

Some resources:
- The Multi-lingual Atari, Analog magazine 45, August 1986
- A bunch of manuals
- Some copy-pasted lines from the Atari 8-bit newsgroup

a) ASSEMBLER

- 130XE+ Makro Assembler (disk)
version, year : 2.2, 1992
author/company : Torsten Karwoth
available..... : freeware, ?
package..... : assembler, editor, menu, monitor,
batch enhancement, linker/packer
features..... : macros
Two pass 6502 assembler with integrated menu, editor
and monitor shell. Needs extra RAM banks. Source
format is derived from Atmas Makroassembler.

- A65 (disk)
version, year : ?, 1989
author/company : Charles Marslett, WORDMARK Systems
available..... : freeware, ?
package..... : assembler, manual
features..... : source include
Two pass 6502 assembler. Source format is based on the
Atari Macro Assembler. Assembler source included.

- Alfasm, Turbo-Assembler/16 (disk)
version, year : 1.0, 1990
author/company : Jeff Williams, DataQue Software
available..... : ?
package..... : assembler, docs
features..... : source include
Two pass 6502/65816 assembler.

- Atari Assembler/Editor (cart)
version, year : ?, 1981
author/company : Atari

available..... : ?
package....... : assembler, editor, monitor, manual
features...... : -
Two pass 6502 assembler with integrated editor/monitor

- Atari Macro Assembler (disk)
version, year : 1.0C, 1981
author/company : Atari, APX
available..... : ?
package....... : assembler, editor, debugger, manual
features...... : macros, source include
Two pass 6502 assembler.

- Atmas Makroassembler (disk)
version, year : 2, 1985
author/company : Peter Finzel, Hofacker
available..... : ?
package....... : assembler, editor, monitor, manual
features...... : macros
Two pass 6502 assembler with integrated editor/monitor.

- Bibo Assembler (disk)
version, year : ?, 1986
author/company : Compy-shop
available..... : ?
package....... : assembler, editor, monitor
features...... : source include, data include
Two pass 6502/65c02 assembler with integrated editor/
monitor.

- Datasm/65 assembler (disk)
version, year : 2.0, 1981
author/company : DataSoft Inc.
available..... : ?
package....... : assembler, editor, menu, manual
features...... : -
Two pass 6502 assembler.

- EASMD (disk)
version, year : 1.0, 1981
author/company : OSS
available..... : ?
package....... : assembler, editor, monitor
features...... : ?
Two pass 6502 assembler with integrated editor/monitor.

- Fast Assembler (disk)
version, year : 1.5, 1995
author/company : MMMG Soft
available..... : ?
package....... : assembler, editor, disassembler
features...... : ?

- Kasm65 (disk)
version, year : 2.41, 1994
author/company : Ken Siders
available..... : shareware, umich
package..... : assembler, editor, linker, docs
features..... : macros, relocation, source include,
conditional assembly
Two pass 6502 assembler. Relocatable object files are
compatible with ra65. Source format is derived from
the Atari Macro Assembler.

- MAC/65 Macro Assembler (disk|cart)
version, year : 2.00, 1982
author/company : Stephen D. Lawrow, OSS
available..... : ?
package..... : assembler, editor, monitor, manual
features..... : macros, source include
Two pass 6502 assembler with integrated editor/monitor.
Mac/65 is a direct descendant of the Atari Assembler/
Editor (via EASMD).

- MAE (disk)
version, year : .96, 1996
author/company : John Harris
available..... : umich
package..... : assembler, menu, editor, monitor, docs
features..... : macros, source include, data include,
conditional assembly
Two pass 6502/65816 assembler with integrated editor/
monitor. Extra RAM supported.

- NASM65 (disk)
version, year : ?, 1992
author/company : Nat!
available..... : ?
package..... : assembler, linker, librarian
features..... : macros, relocation, source include
One pass 6502 portable cross assembler (initially for
the ST). Highly compatible with MAC/65.

- PC-65 (disk)
version, year : 1.0 beta, 1996
author/company : Jan Feenstra & Freddy Offenga
available..... : mailto: F.Offenga@student.kun.nl
package..... : assembler
features..... : macros, source include, data include,
boundary directive
Two pass 6502 cross assembler for the PC. The source
format is highly compatible with the ST-65 assembler.

- Quick Assembler (disk)
version, year : 1.0, 1990?
author/company : JBW, Avalon?

available..... : ?
package....... : assembler, editor, menu, debugger
features...... : source include
Two pass 6502 cross assembler with integrated editor.
Very user friendly menu environment.

- Ra65 (disk)
version, year : 1.0, 1989
author/company : John R. Dunning
available..... : public domain, umich
package....... : assembler, linker, librarian
part of cc65 (c-compiler)
features...... : ?

- Synassembler (disk|cart)
version, year : ?, 1982
author/company : Steve Hales, Synapse Soft
available..... : ?
package....... : assembler, editor, monitor, manual
features...... : source include
Two pass 6502 assembler.

- ST-65 (disk)
version, year : ?, 1991
author/company : A. Stauffenberg, F. Offenga
available..... : mailto: F.Offenga@student.kun.nl
package....... : assembler, menu shell, manual
features...... : macros, conditional assembly,
source include, data include,
boundary directive
Two pass 6502/65c02 cross assembler for the Atari ST
written in 68000 assembly. As far as I know this is
the first assembler with the boundary directive.

b) BASIC

- A BASIC Compiler (?)
version, year : 1.03, ?
author/company : Monarch Data Systems
available..... : ?
package....... : BASIC compiler
features...... : ?

- Advan BASIC (disk)
version, year : ?, ?
author/company : Advan Language Designs
available..... : ?
package....... : BASIC compiler
features...... : ?

- Atari 800 Basic (disk)
version, year : 1.0, 1981

author/company : Microsoft
available..... : ?
package....... : ?
features...... : ?

- Atari BASIC (cart)
version, year : Rev.C, 1983
author/company : Atari
available..... : standard ROM in Atari XL/XE
package....... : BASIC interpreter, manual
features...... : pretty plain BASIC implementation

- Atari Microsoft BASIC II (cart)
version, year : ?, 1991
author/company : Atari
available..... : ?
package....... : BASIC interpreter
features...... : ?

- BASIC A+ (disk)
version, year : 3.05, 1981
author/company : OSS
available..... : ?
package....... : BASIC interpreter
features...... : ?

- BASIC XL (cart)
version, year : ?, ?
author/company : OSS
available..... : ?
package....... : BASIC interpreter
features...... : ?

- BASIC XE (cart)
version, year : ?, 1985
author/company : OSS
available..... : ?
package....... : BASIC interpreter
features...... : ?

- Turbo Basic XL (disk)
version, year : 1.5, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package....... : BASIC interpreter, compiler (V1.1)
features...... : ?
Published in the German magazine "Happy Computer".

c) C

- ACE C (disk)
version, year : ?
author/company : John Palevich & Ralph Walden

available..... : ?
package....... : ?
features...... : ?
This is a newer version of 'Deep Blue C'.

- C/65 (?)
version, year : ?
author/company : OSS
available..... : ?
package....... : ?
features...... : ?
Probably derived from Dr.Dobbs "Small C". Compiles to 6502
code which emulates the 8080 instruction set.

- C65 (?)
version, year : ?
author/company : Keith Ledbetter
available..... : ?
package....... : ?
features...... : good macro assembler
This compiler does not support structs.

- CC65 (disk)
version, year : 1989
author/company : John R. Dunning
available..... : ?
package....... : compiler, linker, assembler, librarian
features...... : ?
Public domain compiler. Also used as cross compiler.
Relocatable object linkage files, and the most thorough
K&R C for the 8-bit. Comes with an relocatable assembler.

- CC8 (disk)
version, year : 2.3
author/company : John Palevich & Steve Kennedy
available..... : ?
package....... : Compiler
features...... : ?
ACE C with more "real" C support (e.g. arrays of pointers
to structs). Requires ACE C runtime libs and linker.

- Deep Blue C (disk)
version, year : 1.2, 1982
author/company : John Palevich, APX
available..... : ?
package....... : Compiler, Linker
features...... : ?
Deep Blue C was originally an independent product, but it
then became available from APX. It converts C to pseudo-
code and then interprets the pseudo code (8080 instruction
set emulation).
Drawn from Ron Cain's public domain C-compiler (Small-C).

- DVC C (disk)
version, year : 1.05, 1985
author/company : Ralph E. Walden
available..... : ?
package..... : Editor, Compiler, Optimizer, Linker
features..... : Quite user friendly program
The compiler generates special object files (.CCC)
which can be optimized and linked. The package uses a
special DOS called DVC DOS which contains runtime stuff.

- LightSpeed C (disk)
version, year : 1.08, 1986
author/company : Clearstar Softechnology
available..... : ?
package..... : Compiler, Optimizer, Linker
features..... : ?
Runs under CLI DOS's and MENU DOS's.

- Tiny-C
version, year : ?
author/company : OSS
available..... : ?
package..... : ?
features..... : ?
First sold C compiler by OSS. This compiler was used to
compile itself! First true language "bootstrap" on any
8-bit machine (it was also available for Apple and CP/M
machines). Derived from Dr.Dobbs "Small C". Compiles to
6502 code which emulates the 8080 instruction set.

d) PASCAL

- Atari Pascal (disk)
version, year : 1.0, 1982
author/company : APX
available..... : APX-20102
package..... : ?
features..... : ?

- Draper Pascal (disk)
version, year : 2.1, 1989
author/company : Norm Draper
available..... : ?
package..... : ?
features..... : ?

- Kyan Pascal (disk)
version, year : 1986
author/company : Kyan Software, APX
available..... : ?
package..... : editor, compiler, linker, macro-assembler
and manual
features..... : ?

Kyan Pascal would run off a single floppy. The Atari (APX)
version needs two drives. A version which runs entirely in
128k should be available too.

e) LISP

- INTER-LISP/65 (disk)
version, year : 2.1, 1981
author/company : Special Software Systems, DataSoft
available..... : ?
package....... : ?
features...... : ?

f) FORTH

- ValForth (?)
version, year : ?
author/company : Valpar International
available..... : ?
package....... : ?
features...... : ?

- Extended fig-Forth (?)
version, year : ?
author/company : APX
available..... : APX-20029
package....... : ?
features...... : ?

- fig-Forth (disk)
version, year : 1.4s
author/company : ?
available..... : ?
package....... : ?
features...... : ?

- fun-Forth (?)
version, year : ?
author/company : APX
available..... : APX-20146
package....... : ?
features...... : ?

- Grafik-FORTH
version, year : ?
author/company : ?
available..... : ?
package....... : ?
features...... : ?

- QS Forth (?)
version, year : ?
author/company : Quality Software

available..... : ?
package....... : ?
features...... : ?

g) PILOT

- Atari PILOT (cart)
version, year : 1980
author/company : Atari
available..... : ?
package....... : ?
features...... : ?

h) LOGO

- Atari LOGO (cart)
version, year : 1983
author/company : LCSI, Atari
available..... : ?
package....... : ?
features...... : ?

i) All the rest

- Action! (cart)
version, year : 1983
author/company : OSS
available..... : ?
package....... : compiler, editor, monitor and library
features...... : fast compiler which generates good code
Needs cartridge for runtime procedures. A PD runtime
library is also available.
All variables are static, so recursive routine calls
are not possible. No floating point type (though a
PD library should make this possible). No arrays of
objects (arrays of POINTERS to objects are possible).

- Quick (disk)
version, year : 2.0, 1990
author/company : Raindorf Soft
available..... : ?
package....... : ?
features...... : ?
This is the "poor man's Action!". Same restrictions as
Action! apply also to Quick. Further restrictions are:
only simple assignment expressions, no records and no
pointers.

- Test Computer Language (disk)
version, year : 2.2, 1985-1990
author/company : D.Firth
available..... : public domain, ?
package....... : compiler and editor

features..... : ?

Subject: 13.15) What makes some XL/XE software incompatible with the 400/800?

Konrad M.Kokoszkiewicz, mailto:draco@mi.com.pl writes:

XL/XE software won't work on 800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Subject: 13.16) What games run only on the 400 and 800 models?

The following are reported as incompatable with models other than the original
Atari 400/800. Most probably do work on XL/XE's if you use a translator to
run the original 400/800 OS on your XL/XE.

Apple Panic Broderbund
Aquatron Sierra On-Line
Astro Chase First Star Software / Parker
Atlantis Imagic
Attack at EP-CYG-4 (by Bram) Romox
Bandits
BearJam Chalkboard Inc.
Boulders And Bombs CBS

Subject: 13.17) What games make use of the Light Gun?

mailto:jmouchmino@aol.com (Bertrand M. (LEXX)) writes:

Bug Hunt, Barnyard Blaster, Crossbow, Crimebuster, Operation Blood, Operation Blood II - Special Forces (not completely sure about that one), Light Gun Blaster (PD), Gangsterville (Italian game written in BASIC), maybe a couple more...

Bertrand M. (LEXX)

James Bradford mentions:
"On the 400, the light gun /pen will only work in joystick port 4." This renders much light gun and light pen software unusable on the 400.

Subject: 13.18) How do I type a tilde (common character in Web URL's) on my Atari?

The Shadow, mailto:The_Shadow@spnt.com writes:

The question is: "How do I type the tilde or squigly line which is in most web addresses? I don't have a key for it..."

Answer: The tilde is an inverse backspace on the Atari 8-Bit which can be very hard to type depending on the term program you are using, however you can insert the hex equivalent very easily, which is %7e in place of the tilde and it will work just perfectly. Do not put a space either before or after the %7e.

I (Michael) add:

Some advanced Atari software supports the tilde character natively. E.g.,
you can type a tilde in Ice-T with the Atari Logo/Inverse Video key.

Subject: 13.19) What's the difference between ASCII and ATASCII?

David Moeser -- erasmus att iglou dott com -- produced this nice translation
table.

ASCII TRANSLATION TABLE -- IBM & ATARI 8-BIT (ATASCII)

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

A short time ago I ordered an "SIO2PC" cable from Steve Tucker at
http://www.nacs.net/~classics/ . I also ordered his software and have been
VERY happy with both. I was VERY impressed with the software, and recommend
both the software, and the hardware if you're either lazy or electronics
disoriented like me. It's GREAT to have my Atari set up and no longer in
the closet! AND, it frees up a space in the closet to store my
girlfriend... ;)

Just a by the by, the people I promised cables to, I finally got my act together and sent them out this week.

Almost want to thank people for getting me going again. I was pretty slow getting my butt in gear, but learned a few tricks along the way.

Some of it was pretty simple, after doing the first two with flat cable which kind of made everything hard, just used the cable off a broken mouse so it ended up ~8' long.

But even the flat cable had some tricks I should have figured out about the same time I found out ice cream cones are hollow. Really easy to just cut a vertical slot in the box and insert the cable there vs round hole and strain relief.

Now onto my next project.

Absolutely! I have an old 800, 800XL and 130 XE and they are still going strong. Only problem is -- I'm running out of floppy drives to run the hundreds of programs I have! Too bad Atari didn't "quality control" the drives better. In any case, I have years of quality 8-bit experience left, thanks to a great computer system that simply died due to bad marketing.

The gamers paradise! The ability for four players to play at once is
remarkable for a system of its time. To think that we buy $40 adapters for
Playstation so that we can have the same ability.

> The 800 is built like a sherman tank,

And it fights like a hippo. The 400/800 is the only computer that I am
confident enough to drop. It helps the computer, actually.

> and is "IT" for me.

Absolutely here. I bought my 800 earlier last year and have tried the Xl and
XE computers to find that the 800 is the best of them all.

> I still have my original 800, and it warms my heart
> just knowing it is there.

Great, just keep it for another 20 years and share it with the grandkids.
Watch them laugh at the shape and cry for joy as they play the classic games.

I went to Toys R' Us today and found the new Pac Man PC game by Hasbro/Atari and it was $24.99. Though I hear the PlayStation version of Pac is amazing, give me an 800 and a Pac Man cart, I will show you how to have some Pac fun! Plus, the set would be about $10 at Goodwill. Of course, being of the "true" Atari breed, I would go for the real McCoy or an emulator.

All in all, I have a few Hasbro games for my PC. The games themselves are not bad but they have a tendency to freeze up on my computer, and you are talking a 700mHz Athlon with a few Gigs to spare on the HD...

Go well,
Jessica

6912. Cleaning out my 8Bit Collection

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-05 00:00:00 UTC
From: Karl Heller <kheller2@ix.netcom.com>
Message-ID: <051120002259092590%kheller2@ix.netcom.com>
Source record: 40884

I've noticed a lot of Atari 8bit hardware for sale on EBay with very little action. I take it that the Atari8 collectors market is a not as popular as it once was.

In any event, I have a basement full of hardware, manuals, magazines etc.. that I'm looking to part with. I'm a collector myself and have lots of gear that I cleaned up and made new again. I have all types of 800XLs, 800s, 1020s, Indus GTs, ICD PRCs etc.. Don't even get me started on the video game systems I have. (I'm not getting rid of it all.. I need to bring my son up in an Atari world).

However, I don't need all of it anymore (did I ever!??). I'd like to part it out but that might drive me crazy. Anyone looking for a bulk purchase of equipment or want to visit my basement? I live in Eastern PA.

If you are looking for something as well.. just send me an email with what you want and how much you want to pay for it. I'll see if I have it.

(And no, my 1400XL system and 1450XL boards are not for sale! *grin* ... at least not yet.)

That .ATR which I D/L'd has some code in sector 2 with only sector 3 being empty? It is a 180K DD image and for some strange reason, sectors 719-720 are unreadable. I have not yet deciphered what format it uses for the directory and VTOC.

-Ron

I don't have a solution but I admire the problem.

On Mon, 06 Nov 2000 04:53:11 GMT, "J. paul" <jpaul55@mac.com> drooled
an embarassing wet spot in his lap as he typed:

>I have an Atari gaming system. How do I figure out what model it is. Also,
>some of the parts are broken (like the cable that connects the Atari to the
>TV). Does anyone know where to find replacements? Or maybe a good website on
>fixing up old Atari system? If you have any advice please email me. Thanks.

If it's a gaming system -- that is, the XEGS (Gray, pastel buttons,
cartrige port on an angle, detached keyboard) then that's the model
you have. Otherwise, a quick guide to the models:

400: Membrane keyboard, cartrige slot underneath a flip-up lid, beige
case. Specs: 8/16k RAM, CTIA ANTIC graphics chip.
800: Same as 400, 2 cartrige slots, 4 expansion cart slots, 4 joystick
ports, proper keyboard, gradiated brown-yellow-white function keys
along the right hand side of the keyboard proper. Specs: 48k RAM,
CTIA ANTIC graphics chip.
600XL: Off-White/dark brown case, brown keys, function keys in silver
along the right-hand side, one cartrige port in the middle-back, short
back end. Specs: 16k RAM, GITA ANTIC graphics chip.
800XL: Same as 600XL, longer back end. Specs: 64k RAM, GITA ANTIC
graphics.
1200XL: Same as 800XL, even longer back, 4 extra function keys above
keyboard, no expansion bus, cartrige port on side. Specs: 64k RAM,
GTIA ANTIC Graphics chip, many software incompatibilities.
1400XL: Looks like a 1200XL. Specs: 64k RAM, GTIA ANTIC graphics,
chip, FREDDY MMU, Votrax SC-01 speech synthesizer (bettern known for
its role in the arcade game Gorf), internal 300 baud modem with 2
phone jacks (line/phone) in the rear, parallel bus. Very few of these
exist, those that do being prototypes.
1450XLD: Like the 1400XL, but with two built-in 5.25" floppy drives at
the rear of the unit; this is one bulky sucker. Very few of these
exist, those that do being prototypes.
65XE: Gray case, white keys, diagonal slats in the rear of the case,
cartrige port at the back, parallelogram function keys above keyboard,
no expansion bus (in NA models). (Also known as the 800XE in Europe).
Specs: 64k RAM, GTIA ANTIC graphics chip,
130XE: Same as 65XE, but with an expansion bus located next to the
cartrige port. Specs: 128k RAM, GTIA ANTIC graphics chip.

Of course, if you want pictures, you can always go to
www.atari-history.com. :-)

If I got you right and you want only the 'boot sector' of image, you can use my ADIR software and extract boot easily. Cmd line is: "adir image.atr -e -boot". It should create image_boot.atr file which is minimal file needed. (PC/SIO2PC needed).

But, why don't you use any of the multiboot programs? Howfen dos or JonW menus? They let to put many boot sectors on one diskette. (Atari only needed).

Tell me more about Ali Baba. My friend and I always played the reverse side
with Return of Heralces. What did you like about Ali Baba?

Not a sales plug.. nah! ;)

But I have to admit, if there was any other system I had to like after the 400/800 it would be the XEGS simple because of the detachable keyboard. (What is hilarious is the XEGS has a manual for the game system, and then a manual TWICE as thick for the keyboard.)

Did some BBS'ing (well I still do BBS'ing on the Atari8) on the XEGS, and probably will again once I round up an extension cable like the one your are mentioning.

HEy, take it easy everyone.

Doctor Clu

PS: XEGS machines make great BBS's Just set them up, and then unplug the keyboard and let it go. Or what I was thinking of doing at work with a extra modem line not being used... set up a XEGS and have the main machine tucked away but have the keyboard readily accessable with a out of view. :)

Many of us here were asking about Tom Hunt a few weeks back when the Closer to Home telnet BBS was unable to be accessed via telnet. (For those that may not have heard or new here, the Closer to Home BBS was an amazing BBS that was an emulated Atari8 environment on a PC running a Atari8 BBS program connected to a telnet gateway. You could telnet in with an Atari8 or PC with a term program with ATASCII font and see an ATASCII BBS again!)
Tom got on here and gave the new site address, which still works...

http://members.nbci.com/cc65foratari/SiteIndex.html

Said the telnet BBS will be back up as soon as he finds a server to host it. Here's keeping our fingers crossed on that one.

Well,
I never said, Howfen is copy protected, I just stated that Howfen maybe
is/was a commercial program and thus copyrighted. And somebody agreed
and told me that it once had been commercially advertised in Page 6 (a
british magazine). But hackers were so nice to a) make pirate copies and
b) update (or upgrade) these copies to newer versions. Many of these
newer versions (3.07 for example) are avaiable in certain Pd
bibliotheques and collections, like Page 6/N.A.U., ABBUC, HAPS, Bellcom,
etc... -Andreas Magenheimer

> c.s.cbm

Well,
thats true. But to use the XEP80 you need a driver. This can be absolutely short, but it does need at least some bytes of RAM. And there will always be some programs which will not work because of RAM conflicts (even if the driver uses less than 256 bytes) with the driver program and other programs that will not work in 80columns mode. So, if you have an XEP80 -always- connected to your Atari you may have to switch between 40 and 80 columns very often or you even have to remove it (or its driver program) to get certain programs running. An 80 columns PBI device would have been much better then, this can be done with the XEP80 but requires some modification...

Since there are not many users (nor many programs) really using the XEP80 (for many users this is only a collectors item), you will of course also not find many more modifying the XEP80 or creating (buying) a complete new 80 columns device. Besides, standard Micropainter pictures have 7680 to 7684 bytes (graphic modes 8,9, 15, etc.) so 8k RAM should normally be enough for such a picture...

Let`s assume someone is writing some a) PD text/wordprocessor program for the XEP 80 and b) more important for me, some graphic converter/loader/viewer programs for it. Maybe it will then be used a little more often. How about upgrading the XEP80 to a "graphic card" (i.e. spend more than 8kRAM, include a special graphic chip), so the little Atari could show GIF, JPG, TIF, BMP and other graphic formats very easily and fast... -Andreas

(I do own an XEP80, once connected it to the Atari, but never really used it. So, it is just lying around...)

Well,
looks like you have the old/original commercial version of Howfen DOS
which is probably copy protected (since many commercial programs were).
There are newer (mostly hacked/pirated) versions around, like 3.07 and
others. But none of the Howfen DOS (or similar) programs seem to work
with Ape and SIO2PC... -Andreas

P.S. I can send you version 3.07 if you like... (but only as an image
ATR, XFD or DCM, thus you have to convert it to your A8 somehow).

> 2.2 is a bit outdated.
> So, What's so special about howfen DOS, and alpha loader?
> Russg

Well,
first of all, I am not a hacker. So, I do not know how to hack or crack certain programs. I got my version (3.07) of Howfen DOS from the HAPS PD library, who got it from the Bellcom PD library...
Special ?!? Well, Howfen can convert/transfer most tapes to Disk very easily. Even multiple cassette programs can be transfered and load then much faster from disk drive. Besides that, you can use Howfen (and similar programs) as a sort of Game DOS to load binary files, (formerly) boot disks and (formerly) boot tapes from a (non-DOS 2 compatible)menu program. Thats all. British Atarians often used tapes (or tapes have been sold in big quantities in GB), so that is maybe *one* reason why these menu programs were and still are very popular in the UK...
-Andreas

P.S.: If you are not a hacker and you need a Cas.-Simulator (to load Tapes from Disk) use Howfen !!

6929. a8jdpeg: JPEG viewer for the Atari 8-bit

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-06 00:00:00 UTC
From: Raphael James Espino <rje@co.umist.ac.uk>
Message-ID: <v7y66m1dmbm.fsf@hydes.sna.co.umist.ac.uk>
Source record: 40808

Hi folks,

Here's some good news for ya all, you can now view your favourite
jpegs on your Atari 8-bit! This version has been ported over to the
Atari from the C=64 Juddpeg, written by Stephen Judd. At the moment
it can display images in greyscale (no colour yet) in 3 different
resolutions. This is just a beta version, but should work with most
images on any 48K or more Atari.

So watcha waiting for? Go take a look at it and let me know how you get
on with it:
http://www.geocities.com/rjespino/atari.html

Currently the Atari viewer can do 320x192 2 levels of grey (GR.8), 160x192
4 levels of grey (GR.15) and 80x192 16 levels of grey (GR.9). However the
jpeg decoder and the image viewer are 2 separate pieces of code, and the
decoder itself can output images at 320 pixels wide and 256 levels of grey
(8 bit luminance). This opens the door for people to write their own
viewers displaying the images in any format they want. The one drawback
is that there is only about 12K of free RAM left (out of the 48K of main
RAM) for the screen RAM and the viewer after DOS and the decoder have used
their share. I'll very probably add an option to dump the raw image
data out to a file which could then be loaded by a separate image
viewer or converted into another format.

I'll be posting the Atari version of the source code soon, once I've had a
chance to optimise it, tidy it up a bit, and add a few comments.

Enjoy! =)

Hi there,

Perhaps the subject is a little drastic, but I'm lapsing into
Atari 400 nostalgia. ;)

I want recommendations for an Atari 400 emulator for a Windows-
based PC. And, to get my juices *really* flowing, I'd like
to be able to play K-Razy Shoot Out again. Ahh, memories.
Remember that one?

I still own an Atari 400, but it's pretty much dead (freezes
after a couple of minutes...), and is in bits somewhere in my
loft. So chances of grabbing a ROM image from that (if required)
are somewhat remote!

Let me know what you recommend

Thanks all!

Tris.

Good point... heh.

2600 (Original): 6 switches on simulated woodgrain panel.
2600 (Second edition): 4 switches, black case.
2600jr: Small, all black design, 4 switches.

There are also various pirate models, some with built-in games, a
sickly looking red console out of Mexico, various japanese versions,
etc. Then there's the Sears telearcade, which is basically the 2600
with the Sears name slapped on it, and so on.

Hi everybody!

Does someone have one of those nice utilities that let you convert bootable floppy disks for the Atari to simple binary files ? I have a lot of bootable disks with games and I just want to convert them in simple binary files to put in empty disks with just a simple loader prog.

Any suggestion would be great.

Thanks,

Emmanuel F.

I don't think you can do it easily.
If a game reads disk sectors directly, it will be hard to convert it to
single executable.
What you can do is to check if there's only single executable on the disk
- this happens sometimes. If so, you don't need whole disk for it of
course.

>mostly do not like 80 columns...) -Andreas

If you design such a device properly, software that isn't intended for use with such an upgrade will never know that it is there. The problem with the XEP80 is that it is not fast, has no colour and doesn't have enough RAM onboard. The NS405 that is inside the XEP80 can handle colour and up to 64kB (without bankswitching, which IS mentioned a a possibility to go beyond 64kB,in the DataSheets). On teh XEP80 if you send data to it's parallelport, the picture is distorted. Because the XEP80 only has 8kB RAM. Or was that just two. BTW the NS405 has a 16 bit bus.

I dunno. In their own right, they're not all that bad, but as updates
to the ol' classics, they're just so much pomp and ceremony. 3D
facelift, flashy graphics, but most of the time they just completely
fail to capture the fun and magic of the original. And I thought Pac
Man was the worst of the lot. That siren noise in the background of
the original was relatively unobstrusive, but in Hasbro's version?
GOD that thing's annoying!! Maybe it's just the fact that the
combination of that layered over top of the other sound effects and
music to boot creates this god-awful cacaphony that make your eardrums
want to pack up and head for quieter climes ... like Yassir Arafat's
back yard.

Source record: 40894

Howdy folks

Larry White asked me to tell ye'all who's on the pictures of the JHV of the ABBUC at the ABBUC site.
http://www.atari-computer.de/abbuc

Top picture: ?, Wolfgang Burger, Joost Kuep
2+3 : first row: Sasha Hofer, Alfons Klueple, Michael (from Thueringen), Benni and Walter Lojek
4 : Foreground: Me, Blue shirt Wolfgang Burger (our president), behind me: Erhard Puetz, Black Shirt: Frank Szymanski (hope I spelled that right)
5 : ?
6 : White sweater: Ernest Schreurs, Yellow Sweater: Erhard Puetz, black sweater: Frank Szymanski (not really sure if this is Frank. Picture and memory are vague)
7 : Marc Montara, Harry Reminder (that's his real name)
8 : ...
9 : Sacha Roeber
10 : Black Hair & Moustache: Raymand Altmeyer, next to him: Heiko Bornhorst, guy in back: Mirko Sobe: Next to him: Markus Roemer
11 : Atari cookies
12 : Dutch guy whoes name I forgot to ask, but he drives a dark blue Ford Mondeo Stationwagon, Misses Schouten, Sijmen Schouten, ?
13 : Bald guy: Mirko Sobe, to his left: Carsten Strotmann
14 : Raymund Altmeyer, Harry Reminder, who is talking to Thomas Buetschke
15 : ....
16 : ....
17 : Alfons Klueple and Hannes
18 : ....
19 : Freddy Offenga's girlfriend or wife (I didn't ask) sitting at table. Next to her is Ernest Schreurs
20 : .....

... means I don't know or "you know them from other pictures"

Why is Bo Schreurs not in the pictures you ask? Well, he made most of them. To my own surprise, there are no pictures (as I rewrite this article (I accidently loaded MSWord, which ofcourse mutulated the text I had written using Wordpad)) of Robert 'Fox-1' Verdaasdonk, Rene 'TXG' de Bie and Andreas 'Charlie Chaplin' Magenheimer. Nope, not all of us have names like that.

Thanks for replying..

Yes I know that if the game reads sector directly, what I want to do is impossible. But the my disks have only one binary file which are booted directly by the Atari on power-on. I am looking for an Atari utility which could "extract" that bunch of bytes an save it under a .BIN in any other disk.

I all depends on the game it self. Usally it takes a bit of code
following to see what it does then find the real start point of the
game, find where in memory it goes, what memory locations it needs set
etc. The only reliable way is to do it all manually. If said game also
loades other parts from disk latter, then it isn't worth it. Also if
the game overwrites the loader program, extra bits must be added to
load it high or hide the part in question, then move it back when
finished loading. I did that to several zeplian games to get them to
load from my harddrive under SDX.

Hello jamesb/emannuel, hows the atari going

Re:boot to binary

First of all you will need a memory map of the atari, then you will need something like an ml monitor, either as s/w or built in (I use ultimon/omnimon), preferably a ml monitor that allows you toi read a ghroup of sectors into ram, if the boot is multiload, you will need to know where each part loads in mem and where it executes, and where the code lies on disk, and also wheather the part load requires the loader, so you will need to understand what mem loc. that atari tape and boot disks use, also weather or not the program uses a bank swich routine, namely a load/store instruction into $d301h, and where the program executes, to convert it to dos, load in the required sectors (outside dosmem) goto dos, do a bin save from the first byte where you loaded the sectors, to the last byte of the secvtors you loaded, repeat the process till you have allk the disk as binary files, making sure you know where each part loads in mem, and edit the equiv sector so it loads into the right area of mem, on the last file and any files that require it, don't forget to include the init/run addr...

sorry if this is a rough explanation, i'm just recollecting how I did it

happy atari'ng

I don't have much experience fixing Ataris, but I have found a couple of chemicals that can help renew / fix / improve old contacts. MG Chemicals makes a product called "Super Contact Cleaner with Poly Phenyl Ether" which bonds to the contacts and helps increase conductivity and prevent oxidization. I use it religiously every time I install a new card/SIMM in my PC, and even my oldest cards still work great (a lot of my older cards got heavy duty use as bench cards a couple of years ago when I was a working freelance PC tech).

If memory serves, there is also a product out there called "Stabilant 22" (that was initially developed by one of the big aerospace firms) that has the same properties. I prefer MG's product because it is less expensive.

Hope this helps.

Try "http://www.umich.edu/~atari/atari/8bit/"

For MAC/65, it's
"http://www.umich.edu/~atari/atari/8bit/Languages/Assembly/m65v42.zip".

There's a ton of good assembly stuff in that directory including MAE.

I'm using Disk Wizard on an emulator.
I want to disassemble Sargon III.
I do fine, but I would like to print out the disassembly.
Since I'm using an emulator, the P: device doesn't work.
Anyone written a modified P: handler that writes to a disk file
instead of the printer?
Or is there a good disassembler that writes to a disk file?
Thanks
Russg

My cousins, my brother and I staying up all night for a week in the
middle of summer playing Ali Baba. There's nothing really great about
the game, it's just one of those memories that you can't give up. One
of the things that makes it still special is the fact that we played
and played and played, and I have never completed the game. Don't spoil
it for me either! It's still a blast for me, and I restart it whenever
I pick it up again.
I really enjoyed the Ultima Series. Recently a friend and I fired up
the emulators and Ultima II and I sent him a copy of the disk I have
where we left off 15 years ago. We played for hours on the weekend. We
would connect with netmeeting and sit around the computers playing and
passing hints to each other. Not quite the real thing on an emulator,
but great anyway since his 800xl is packed up.

Isaac

Hi Russ,

Get yourself a version of IdaPro from DataRescue which can
do 6502 (I've used it to do 'Elite'... 1st demo coming soon ;-)

The full thing is expensive (but worth it) and the latest demo
only does 80x86, so your better off going for an old DOS
demo from available on Simtel for ftp called 'ida37fw.zip'.

The output it produces can be saved an used in pretty
much any assembler.

Regards,

Mark.

Why don't you try any of the PC disassemblers? My CHKEXE has options for disassembly the EXE file, CHKBOOT can disassemble boot files. I don't say that the disassembler is good, it's not (it just disassembles everything, doesn't have data/code recognition). But it good enough for such a purpose, I think.

Howdy Andreas, folks (since this is getting too Atari for the Commies, this is no longer crossposted)

> An 80 columns PBI device would have been much better then, this can be done
> with the XEP80 but requires some modification...

Somehow, Atari managed to ty the XEP80 to roughly 15 kilobaud. You'ld have to get rid of that restriction. As I said, the NS405 can go much faster. And you'ld have to rewrite the drivers since the XEP80 would be using different addresses. If you do so, why not start all over?

>Let`s assume someone is writing some a) PD text/wordprocessor program
>for the XEP 80 and b) more important for me, some graphic
>converter/loader/viewer programs for it. Maybe it will then be used a
>little more often. How about upgrading the XEP80 to a "graphic card"
>(i.e. spend more than 8kRAM, include a special graphic chip), so the
>little Atari could show GIF, JPG, TIF, BMP and other graphic formats
>very easily and fast... -Andreas

That would be nice. BTW check out www.geocities.com/rjespino/atari.html and then click on a8jdpeg. It's the beta version of a JPEG viewer for the Atari. Rafael James Espino from England translated the C64 code written by Stephen L.Judd into Atari code.

Thanks Mark and Jindrich.
I was too lazy to hook up a real atari.
I used APE and printed the disassembly that way.
Using PC disassemblers, well, I'm used to Disk Wizard and it is
very convenient for this stuff.
Buying a cross assembler, I doubt it.
I'm more comfortable with the old A8 tools I used to use.
I think I might try the chkboot from jindroush' page.
Later,
Russg

Russ; PC XFormer 3.8 (DOS) sends text to my printer just fine, but I have not
tried it with Disk Wizard. I have built a disassembler into DiskTool from
A.N.A.L.O.G. and just recently added it into DiskMend which handles double
density. It should be relatively easy to add the option for disassembly to disk
file for 2 drive systems.

-Ron

I don't have a solution but I admire the problem.

So, Ron.
Do you have a website where one can get your modified Disk Tool
and Disk Mend?
I'm progressing ok, now. Man it is slow and the old brain cells start
going round and round.
So, far I've figured out how Sargon III loads the first 40 sectors or so.
That may be about all there is to it.
I don't think Sargon III is a very big program and I've always wanted
to understand chess playing algoritms. I'm a long way from that yet.
I may be able to make a binary load of the boot disk.
Regards,
Russg

Best Atari 8-bit emulators are XL-It! and Atari800/Atari800Win
(particularily the latter). These run practically everything you can
throw at it and they're pretty fast, to boot. I also have KC's K-Razy
Shootout on my FTP site (among loads of other stuff). These emulators
are also available on my site.

That's great.
But it would be excellent if it could work in HIP mode (160*239*30
shades). And probably some colour modes ILC (80*239*256) and TIP
(160*119*256).

Hi,

Yes, that's true, I think HIP would be great for this sort of thing.
So the big question now is...

Who wants to write a HIP viewer for it? =)

The current version is limited to greyscale, but there is another version
of the source that can do colour. Converting that is going to be the next
project.

To be completely honest, unless your webTV doesn't do java script, then you won't be happy with CAB I'm afraid. I have done the CAB thing and I have to admit (gasp!) that Atari computing and web browsing don't mix. The exception this rule is when I telnet out with my Atari 800 through a telnet on a BBS and reach a Lynx browsing site.

Mega ST and CAB.. yuck! I have a 16mhz 1040ST and that is actually somewhat pheasable as a browsing machine if I turn the graphics off. Nice and fast then.

On a TT, Hades, Milan, AfterBurnered Falcon, the web browsing starts looking and feeling nice. But anything prior to that is nostalgia and stubbornness. ;)

My TT is still way to slow to browse on. I think you have to go even
a step beyond the TT to make it bearable. And I don't think it's just
the computer speed. I'm not so sure CAB and the other browsers do a
real good job wiht HTML.

Use somehting else. ALmost anything else is faster.

I update my catalogs once a week. Just before this message is posted.
So when you see a new posting, check my Catalogs. After I post this
message. I'm off for the weekend. But I'll be back after the weekend.

e-mail: atari@benjamin.net

To make room for new stock, Bravo Sierra Computers is holding a YearEnd
Holiday Sale. Everything is 10%-30% off! Atari Orders for $50 and up
are 10% off, Orders $100 and up are 20% off and orders $150 and up are
30% off provided the customer claims the discount in E-Mail. This Sale
covers Atari Jaguar, 8-Bit & ST. This Sale does not cover Monitors.
Customer pays Shipping. So order now while supplies last. Get your free
Atari catalogs at: www.atari.benjamin.net or E-Mail atari@benjamin.net

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari
64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories!
View Atari Catalogs on the Web at http://www.atari.benjamin.net & Jump
to my FTP site linked to my WebSite so you can Download Free Catalogs
or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's not an inconvenience. I do ask that you specify
Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you
by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can
attach text files to your E-Mail. Catalogs are just regular ASCII text
files so you can download them into your text editor & view them, edit
them or print them out! It would make things easier for me if you take
my Catalogs, load them into your text editor, delete what you don't
want and E-Mail me the rest! To expedite things, include your complete
Mailing address so I can figure your Shipping/Postage & Handling. I'll
be back after the weekend.

Hello, my name is Benjamin Smith. I'm a Collector & Jaguar Game Player.
With all my games to play, I have no one to play Games with on my Atari
Jaguar. I live in Portland, Oregon. USA and I'm looking for Atarians to
play Jaguar Games with. You don't necessarily have to have a Jaguar.
Most any Atari will do. I'm thinking of starting Atari meetings in
Portland. Focused on Gaming but still supporting any Ataris. Call Ben
anytime at (503)256-9974 or E-Mail:

e-mail: atari@benjamin.net

If I'm unable to answer, leave a message and I'll call you back.

>"Russ Gilbert" russg@en.com asked:

>using Disk Wizard on an emulator. I want to disassemble Sargon III.

Russ; I tried Disk Wizard II release 2.1 (c) '84 in XFormer 3.8 (DOS) and it fed the PC printer just fine.

No site, but I will look at patching a generic print subroutine into DiskMend. Could make it an option to send the output to P: or D?:xxx during the sector disassembly; currently it just stops at the bottom of each screen and allows a screen dump if you request it. Unfortunately, it is a simple routine without any nice address mnemonics like DW II. I will mail you a copy if I make it work.

Will SIO fetching the sector data cause any interference at the DCB level with CIO writing to a disk file?

-Ron

I don't have a solution but I admire the problem.

Might have been down. I just spent the better part of the evening
upgrading my system, so naturally it was down during this time. I've
also had some connectivity issues with @ home. Actually, I have a
lot of connectivity issues with @ home. Their tech support is on my
speed dial, put it that way...

I also discovered I had a permission set wrong, but it is fixed.

Anyway, all is well and good now, and it should be up and functioning
nicely.

Great, the source will be coming out very soon, maybe early next week.
Basically the decoder as it stands will put 8 lines at a time of data of
256 grey levels (1 byte per pixel) at up to 320 pixels wide in a buffer.
You can then use that data to create a HIP file, or even display the data
immediately. But there is only about 12K of normal RAM available for the
screen and code to do it.

Ok,
I have the original slingshot tape from atari UK. Converted it to disk
with Howfen DOS. So, I can only send an image created from this disk
(and you know: SIO2PC and Ape do not like Howfen DOs; i.e. they fail to
boot these disk images). But if you wanna use or play this game on the
original Atari, this should not be a problem. If you still wanna use
SIO2Pc or Ape you may have to hack/crack the game data... -andreas

Well,
for me a JPG viewer with four colors (non-interlaced gr. 15 - but
colours not greyshades !) or 256 colors (non-interlaced Gr. 9+11 Apac or
apac-2 mode) would be enough. I personally hate interlaced graphic modes
(i.e. I hate flickering and swimming !!) -Andreas

6999. self-built IDE interface

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-10 00:00:00 UTC
From: Andreas Magenheimer <magea000@mail.uni-mainz.de>
Message-ID: <3A0C1308.1DA29615@mail.uni-mainz.de>
Source record: 40773

Hello folks !!
Do you like to know how a self-built IDE interface looks like ?? And even more, would you like to see the schematics and download some software, so you can also create it ?? Maybe this is not the best or perfect method of creating a harddisk interface for the little Atari. But it surely is the cheapest method... Take a look at this URL (english spoken):

http://www.atari.myweb.nl/hardware.htm

And there is even more of Atari nostalgia. By the way, the site is hosted by Sijmen Schouten (i.e. it is his own homepage). Have fun exploring his Atari stuff. greetings - Andreas Magenheimer

7000. XE 1MB ROM Emulator

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-10 00:00:00 UTC
From: inf410@worms.fh-rpl.de
Message-ID: <8uh3s5$45n$1@villon.fh-worms.de>
Source record: 40774

Hi i`ve a strange PCB Proto for the Xe in my collection.

It is a pcb based on a XE supercard.
The following was printed on the pcb:

Atari 1MB ROM EMULATOR
Rev B CO26438
and it had
1 74ls139,
4 27512

ist was connected to a Supercard Rev b.

They (Atari Tech.) wrote that it should be used with 2764 or 27128. But they also tell in a fax from Atari Corp. that it could address eproms like the 27512 or higher. There was also a layout for the memory switching and a little more.

It was used with a supercard Rev b and that uses 1 2764 - 27512. So it should be any kind of expansion.

What should it used for?
There habe been no games out with more than 64KB.

Any further info would be nice. It is not listed in best, where can i find some more info (it has a CO number)?

Thanks

7001. RE: IDE interface for the 800,XL's and XE's

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-10 00:00:00 UTC
From: Curt Vendel <curt@atari-history.com>
Message-ID: <3A0C200A.4A6DE591@atari-history.com>
Source record: 40775

Hi Andreas,

Its a great little hack and Sijmen and I have been working together and he's giving me the rights to create other versions of his board, right now I've just finished the board design for a version that will work in slot#3 of the Atari 800. I'm making a version to plug into PBI port on the XL's (Will require 1 internal jumper wire to be soldered) and a version to plug into the back of the XE's) For the 1200XL, I'm designing a piggyback version, simply remove the CPU, plug in the board, then plug the CPU onto the board and clip on one jumper wire and your set.

The 800 version boards will be ready in a few weeks along with a customized Atari 850 case with new front on it that contains a built in Power supply and IDE hard drive, so all you need to do is plug in the board, connect this new external case to the 800, sit it ontop of your 800 and power up and load up DOS with an autorun.sys to load the IDE drivers. I will sell the board for $39.99 with driver disk, I haven't decided on the price of the external HD module yet, but not too much, like $69.99 or so with an IDE drive (size undetermined yet, I have to see how low a price I can buy them in small quantities.)

For anyone looking for a very low cost way to upgrade their systems this is a great route, sure there is SIO2PC which is a stable, well established system, but if you don't want to run a PC along side of your Atari and want a larger capacity system, this little addon is a great upgrade.

I'm working on modifying the drivers and also doing a special version for the XL PBI bus to autoload the drivers off of the expansion board, if anyone is interested in working with me on the code, please let me and Sijmen know, thanks.

Curt

Dude, congrats and thanks. Not often will someone do such a great hack, and even rarer is the time that they'll sell the stuff in that range. $40 isn't pocket change, but it's affordable, specially in comparison with some of the crap I see on other platforms. Also, the $70 case isn't such a bad price either, and if you could knock $5 off the price and sell it without the drive, that would be more than fair. I can't imagine needing more than a couple hundred megs on the atari, and they are so easy to find used that there is no reason for you to worry about getting small quantites at the right price. Leave that up to the user. If you can still afford to, that is.

Thanks,
John

hello atari guys/gals, keep the atari humming, thats what I like to see

Re: 65xe/800xe

65xe was released in europe and the UK, the 800xe was for the russian
and eastern euro. mkt, when that market existed, to this day i've only
seen piccy's of it, nothing physical, although I have seen the only PAL
modified 1200 outside the US, and a motherboard of an 800xlf...beat that
(both of which used to be owned by the same person), I also saw what I
believe was an early production version of the 1200 in someones house..
in the depths of south west london (UK)

Source record: 40782

hello there atari peeps, hows the atari going

Anyway re:Hasbro restructuring etc etc.. boring

Firstly what is hasbro doing bring out a game like PACMAN (home version) when it doesnt even own the patent/copyrights to it
I know this because I know the 2 individuals who actually acquired the rights to pacman (home version) because I used to work next door to them (litterally- before I got another job), and yes they do own pacman rights/ipr etc.etc.. (boring) lock stock and 2 smoking barrells

Also the reason why hasbro is restruct... is because the director of microprose (one of hasbro's labels) and one of the directors of hasbro interactive were fired... so I was told... and hasbro are still losing money hand over fist
Perhaps people will listen to ME now, and lets get Atari back into a market it actually knows something about... You know where I'm coming from

Happy Atari'ng

> Err, no, not really.

Uh huh, esp. since the classic computers are becoming a lot more popular now since the retro boom.

> You get a false impression because you use this
> newsgroup.

I can name, on both hands, people in my area (North Central Kentucky) that know and use Ataris. They just sort of keep to themselves. One hand can be filled with people my age that are my friends from school. Pretty impressive for a crummy old gamer.

> Back in the real world an ever increasingly small number of
> people know or care who Atari were.

True, but that does not mean there cannot be a comeback. C64 and Atari are selling like hotcakes where I live, so are Coleco games, if you should be so lucky to find any. I guess it depends on what circle you run in. Then again, I live in sort of the Silicon valley of KY, the Lexmark/IBM area.

Now, does anyone see my point?

Jessica

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

> hasbro interactive were fired... so I was told... and hasbro are still
> losing money hand over fist

PACMAN was released because they and Namco were bickering over who would release the PC version of Pac Man. Hasbro wanted the first crack at it and so did Namco. Supposodly, it was agreed that Hasbro could release Pac Man for the PC but not any other platform. Namco, on the other hand, who owns the rights to and originally relased Pac Man, is making games for PlayStation and N64.

> Perhaps people will listen to ME now, and lets get Atari back into a
> market it actually knows something about...

YES!!! The real kahuna. If Atari were in my hands, I would re-support the 2600 and all the other Atari platforms and produce software for these instead of going into the PC market. Atari in its original state has an awesome following, does it not? Now is the time to take advantage of the classic computing boom and resurect the classic platforms into use and manufacturing. Hell, the Jag at least should still get its props!

Err, no, not really. You get a false impression because you use this
newsgroup. Back in the real world an ever increasingly small number of
people know or care who Atari were.

Hi Eric,

That version will be ready about 1 month after the 800 version, it will
however require adding 1 internal soldered wire on the inside of the
600XL/800XL case, it wont be necessary on an XE.

Hi Daniel,

Simply replace the 16K module in slot #2 with a 32K and you've still
got enough memory. B?C Atari Sales also has 288K memory boards for sale
as well (www.myatari.com) but they only emulate 16K RAM /240K Ramdisk.
I'm messing around with adding some 6116's to the board design this way
people don't lose 16K when they replace the board, but that will be a
later version and I will offer a trade up for existing IDE interface
owners, but that wont happen for a while as I have two other projects
which need to be finished and out the door first before I come back and
revisit upgrading the existing IDE designs.

Our Atari user group (SCAT) President showed us
CAB on his TT with a Nova graphics card - I thought
it was very usuable. I did take a little long to render some
simpler graphics, but - big deal, so you wait a few seconds
longer to view some site. I would sacrafice a little time to
be able to browse on an Atari - yeah, that would be fun.

As for the original topic of this thread - I really dig my
800xl - it is the only one I use (have a couple-o-800's though).
Gotta love the design of it - nice browns and tans...better
special keys (help, reset, option..) Early 80's :) Love it...
I'd love to setup an 800 - they are just too darn huge :(
Can't fit the beast (and it's drives) anywhere !

IIRC there was a hack published to piggyback 8 additional ram chips on the existing ones to make a 32K board. A neater (but tougher) hack would be to add 64K drams to duplicate the Mosaic 64K board.

FamilyNet HQ: Telnet:\\www.family-bbs.net

Hey everyone,

This is the LAST CALL if anyone wants to be placed on the Mega Atari List 2000 befroe the final text-only edit goes onto the web (as opposesd to graphics and fancy HTML--for our lynx browsing friends). I will take submissions after I get it online, which should be before Thanksgiving/late November, but it will take longer to post online. For those who do not know, the Atari Mega List is a state by state/country directory of Atari users around the world, ranging from the 2600 to the Jaguar, 400/800 to ST/TT/Hades. To all interested parties, send your:

Name
Location
Atari Interests
Popcorn (any other info)

to mailto:jessica.cornn@fmlynet.org

Acceptable uses for this list include corrospondence/netowrking with other Atari users (local or beyond) and trade intialization.

Thanks to everyone who has signed up thusfar (1999 listings, compiled by Greg Goodwin/Dr. Clu are being posted to the web as well) and to those who plan to sign up soon!
Feel free to stop in at http://www.geocities.com/atarimegalist after Thanksgiving. I will do a posting as soon as the full site is up and running.

Keeping the Atari Faith,

Jessica Cornn/LykeWyse

P.S: Stop into our club site, JYBOLAC, headed up with the help of myself and Greg Goodwin, at http://www.geocities.com/lady-aramis/index.html

>rights to pacman (home version) because I used to work next door to them
>(litterally- before I got another job), and yes they do own pacman
>rights/ipr etc.etc.. (boring) lock stock and 2 smoking barrells

Atari aquired the rights to create and distribute a version of Namco's
Pac Man (originally for the 2600, but the rights aren't limited to a
specific machine, just that it be Atari that makes and releases it).
When Hasbro bought Atari, they also acquired those rights.

>Also the reason why hasbro is restruct... is because the director of
>microprose (one of hasbro's labels) and one of the directors of
>hasbro interactive were fired... so I was told... and hasbro are still
>losing money hand over fist

If they actually made good games, they might actually make money. :-)
And anyway, it's only Hasbro Interactive themselves. All the
companies under them are still okay.

>Perhaps people will listen to ME now, and lets get Atari back into a
>market it actually knows something about... You know where I'm coming
>from

Not possible, unfortunately, for an abundance of reasons I discussed
in the ST newsgroup. Primarily, there's just no room in the market
for a new computer system. Everyone's already firmly entrenched in
either the Mac or PC camps. They've become the de facto standards of
computing, and anything that's not compatible with one or the other
(but Wintel in particular) just won't sell. We're living in an age of
supercomputing, where machines outdate themselves every other hour,
and where everyone expects everything yesterday. No one's going to
want a new platform that they'll have to start all over again in. And
that's just one of the reasons.

Yes, I know, it's awfully pessimistic -- but also realistic. Going up
against Apple and Microsoft isn't merely David and Goliath, it's
digging away at the Andes mountains with a plastic spoon.

The "Gaming" systems are the 2600, the 5200, the 7800, the Lynx, and the Jaguar(and Pong if you want to go back that far). They also made a lot of coin arcade game systems. The XEGS was a computer in a game machine disguise. As with any other computer ever made, all of the Ataris can play games too, but are not actually gaming systems. Describe the one you have.

Replace machines can be found, many parts at B&C and at Best, among many other vendors.

Rick D.

> the XEGM is my favorite 8-bit, i would have really liked it to have a
>PBI port on the back, with a meg or more of memory(mathy you reading
>this). it was the most modern looking of the 8-bits.

Yes I am. Hope to have the PCB's ready before christmas.

CU Mathy van Nisselroy

PS it should be possible to put teh PBI back on the XEGS. The code is inside the ROM, problem is you'ld have to recreate the MPD signal. Maybe piggybacking an XL/XE MMU to the XEGS MMU. Problem is, I don't know exactly how (which pins should or should not be connected together.) If somebody knows how ALL the signals are logically connected together inside the MMU (XL/XE and XEGS MMU) I'ld love to hear that.

7040. Re: JHV of the ABBUC. Pictures of the Atari 8 bit meeting on the NET

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-13 00:00:00 UTC

Message-ID: <8uogsb$cd1$2@nets3.rz.RWTH-Aachen.DE>
Source record: 40663

Howdy folks

Wolfgang Burger has placed some more pictures on the net.

(a quick reminder:
Go to http://www.atari-computer.de/abbuc.
Choose whether you want Java or not.
Click on "JHV 2000" at the top of the menu that will now appear on the left of the screen.
Two more entries will appear. Choose ALBUM 1 for now.
Click on one of the underlined lines that will appear on the righthand part of the screen.
To enlarge the small pictures, click on them.)

And there are some famous Atari people in these pictures:

21 : Standing to the left: Markus Roemer, standing next to him, in the yellow sweater: Freddy Offenga (of High Tech Team (big demo) fame), sitting in from of Freddy in Bo Schreurs (of Pooldisk fame), standing next to Freddy: Thomas Grasel and next to him Carsten Strotmann.
22 : from RIGHT to LEFT: Ernest Schreurs (of Pooldisk fame, brother of Bo), Marc Montara (standing) and Erhard Puetz.
28 : most recognisable people you know from other pictures. Except one. The guy on the right with the black sweater is Andreas Magenheimer.
29 : from RIGHT to LEFT: Robert 'SysOp Fox-1' Verdaasdonk, Richard Douwes, Andreas 'Charlie Chaplin' Magenheimer, Rene 'TXG' de Bie

In ALBUM 2 you will find more pictures. Most of these have names. On atleast one of them is Andreas Magenheimer (look for his name next to the picture).

On the top of the screen you will find "ALBEN", click on it to see more pictures of other happenings)

If it's not a mechanical problem (the plastic key doesn't come up after you hit it), try Best Electronics at www.best-electronics-ca.com. But you'll have to open up your keyboard to see it it has a double or single layer mylar (that's a kind of plastic) inside. Both cost 22 US dollars at Best. BTW while your at it, make sure you order their catalog too. It costs 15 bucks but is well worth the money. You will find just about any part you want inthere.

Howdy folks

I almost forgot.

If it IS a mechanical problem, try some vaseline. My XEGS's power on key and my 800XL's 'B' wouldn't come up again. Some vaseline fixed that. But make sure you only use a thin coat (sp?), as it will attrack dust.

Source record: 40667

Hi,

Sure, there are a couple of companies that sell a 2.5" to 3.5" adapters, but you have to then find some 2nd external power supply (an 800Xl one would work) and adapt it to plug into the PC power connector on the adapter to power the drive (remember, 2.5" and 1.8" HD's take power and data from the same single connector). I may delay the 800 IDE interface for an extra couple of weeks, I may have found a better route to go.... Compact Flash! Very easy to interface with an IDE bus and it looks and acts just like an IDE drive, then you wont have to bother with any external box at all, everything would be on 1 board that would pop into your 800 or plug onto the back of your XL/XE and you just slide in a compact flash card, they are getting really cheap, you can pick up an 8MB for $24.99 or a 20mb for $69.99 and just plug it in, format it and your ready to go!

Curt

You can always get another XE on ebay for anywhere between $20-$40. This might actually be cheaper than trying to repair one.

Sort of and no. With an 850 on the A8 and a nul modem cable connected to the PC serial port and the proper terminal/telecommunication programs running on each system, you can make file transfers just as if you had 2 modems and a phone line. There should be a link to the nul modem cable construction in the "Welcome to A8.." message posted every other week or so.

-Ron

I don't have a solution but I admire the problem.

Keycap might pop off, but the fix lies under the mylar sheet key stem
presses on, so the keyboard has to come apart to replace mylar or
repair mylar contacts. Try this link for supplies to repair mylar
contacts - http://www.chemtronics.com/catalog/catalog.cgi?

>Can the 850 interface be used instead of an SIO to PC cable, and will APE and SIOTOPC recognise it?<

There was an ANTIC magazine program that made porting serial data between an A8 and ST pretty easy. "LinkLine" was its name, IIRC.
If one rewrote that for a PC, it should work ok. However, since APE will run at 50Kb/s +, someone would have to tweak LL -- it was written in C, and limited to 19.2 (again from, memory). Which brings up an interesting question -- I've never seen any communications program that would do more than 19.2 on the A8, but since the bus will run *at least* 50Kb/s, shouldn't it be possible using a null modem to go at least that fast?

You can probably get another 410 recorder for $5 plus shipping less than repair.

But, parts could be obtained from B&C Computers. Get a new belt, or It's been so long since I took one apart you could adjust the belt you have with more tension.

The head isn't worn out, just need cleaned. Get a cassette cleaner and run it, there is A Poke command that will run the recorder to run the cleaning tape. Someone will tell you here what it is or if not will look it up later and post the Poke, command.

I'ld open up the keyboard and check where the fault lies. It's probably the keyboard mylar, but these can be pricy. Maybe something inside the key is broken, but you'll have to disassemble the keyboard.

CU Mathy van Nisselroy

PS the keycap will come off, but won't do you any good here. Only if the key doesn't come up after you pressed it down, will you benifit (sp?) from removing the key (and applying a wee bit of vaseline).

Well,
I recently recorded 10 Audio Compact Discs with 36 Game sounds each.
Thats 360 Atari 8Bit game sounds in total. I am selling them at a low
price (5DM, about 2 Dollars) here in Germany, since I do not have any
copyrights to the sounds. Anyone interested can then of course upload
the sounds to internet and convert them to MP3 format. But nontheless, I
am only selling the CD`s here in Germany, since I do not wanna make big
sells (and most important I do not wanna get claims about copyrights
!). -Andreas

Is this cable for the +5V (from one of the joystick ports) ?? I already
have another IDE interface that works as a PBI device, it uses the XL
parallel bus and thus needs the +5V cable. If you use it on the XE it
needs an adapter (converting cart. slot + ECI to XL parallel bus), but
then works alright (allthough the XE is missing 3 signals: RAS, CAS,
CASINI, I believe; i.e. 3 signals are not included in the ECI or cart
slot, but the interface works without them - I do not know why).

Well,
do you have some millions or billions of dollars lying around ?? maybe then you would be able to still support the 8Bit Ataris and even produce new 8Bit hardware. But I guess you do not have so much money and companies who have some money do not want to produce things (Atari hardware) just for fun or nostalgia reasons. they wanna make some profits. With 8Bit hardware you cannot make profits nowadays. But maybe with re-released and re-designed 8Bit software for current platforms you also cannot make profits, because the Atari users don`t like it (they wanna have or play the original games) and other users are not interested at all in such "antiquated" games. Who wants to spend 50 dollars or more (here in Germany about 120DM) for a new version of Pacman, Millipede, Breakout, Pong, Q-Bert etc. ?? Most users/gamers don`t !!

So, if Atari belonged to you, Jessica, it would not live for a long time (and you would go bankrupt very soon). Maybe Atari should belong to all atari users, i.e. the whole Atari community. it should be given free, for anyone who likes to support it with software, hardware or whatsoever. Anyone should then be able to use the Atari name and its well known Fuji logo (for whatever purpose). -Andreas

> http://www.fmlynet.org

Well,
I think Atari and CBM computers are selling mostly well for the
collectors, not the users. Only those who want to collect computers or
computer items (and these people are quite massive) buy Ataris and
Commodores. But lets pretend Hasbro would come out with a new 8Bit
Atari, no collector would buy it, simply because it would not be a
collectors item (to new to collect it, too big quantity, etc.).
Maybe in a few years collectors will start to collect PC machines
(80x86) and I am sure that in a dozen of years (or some hundred years)
even Pentium 3, 4 or 5 machines will stand in some sort of computer
museum and also some private computer collections. Maybe nowadays we are
not only collecting mauritius stamps or pictures/paintings (from

Rembrandt, Van Gogh, Picasso, etc.) but also computer hardware (and software). Weird isn`t it ?? -Andreas

>
> >
Yeah,
I agree and you are right: this is a rather pessimistic but nevertheless
- realistic - point of view. Maybe a new Atari must be PC or MAC
compatible to have success. Since many (former) Atari programs (software
like Magic, Papyrus and others) are already avaiable for MAC, a new
Atari should be compatible to MAC but much cheaper and much better. This
is what Atari did in the past: create hardware which is better than
Apple but still much cheaper (still they lost the battle). A modern
Atari should then be designed for the future (ahead of its time): 1
million Giga-Hertz, 1 mega-trillion terra Hertz harddisk, 1 trillion
terrabyte RAM, 1/4 trillion terrabyte graphic card, etc. etc. Its name:
HAL 9000 or Godfather of computers (you should not have other computers
than me) or simply T-1000. -Andreas

7076. Rom chip problem

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-15 00:00:00 UTC

Source record: 40701

Help!

I have a problem with my 600XL. When I try to boot it ends up in
selftest mode (the memory check part). It shows that there is something
wrong with my rom, the right-hand bar becomes red.

Which rom chip is faulty? The OS-rom or the Basic rom.
Is it possible to decide which memory region that is erroneous?
Finally, does anyone have the sourcecode for the error checking utility?

Thanks
Olav

Ditto on the Passionately demo. That was really stretching the
4-voice limitation -- almost a psychoacoustic demo!

Another great one is the Ballsong demo ("Never twice the same, never
once very different" - or something like that). I could listen to
that one for a long time before I got bored with it. It'd be cool to
have each distinct phrase sampled from that one. Acid Music could do
some cool looping tracks with it. Maybe I'll get the notion one day!

Later!
Steven

Only if the drive is a Happy or double density like a Percom or Indus or
USDoubler and the PC has a 5.25...
AtraiLink by Hiassoft seems to do it; extremely marginal with MyUtil; be
cautious - both are often called AtariDsk!

-Ron

I don't have a solution but I admire the problem.

Could the drive have the SIOTOPC cable plugged in and just copy dx: to d1:
and vice versa? I have fitted all my 8-bits with the apropriate diode to the
data line. This would be the only way to do it reliably?

Yes and I agree with you, but you left out one important thing. When/if
this new Atari machine is made (and I would buy one if it was) the company
making it must do something with it. The Tramiels were bunglers in this
regard. They made machines like the Falcon and the Jaguar (both ahead of
their time) and did nothing with them. No softwart, no support.

Oh, ok, I didn't know that they were different. Thanx for the info, I could
have ended up buying a drive for nothing. Where can I buy a Double-Density
drive for a cheap price?

Do you really think of the Falcon and Jaguar as ahead of their time? I seem
to recall they were incremental improvements over existing technology at
best or maybe a "6 months ahead of their time". They were OK in their own
right, but I ended up buying neither. There just wasn't any compelling
reason to buy them.

I understand the cart/horse aspects of "No software, no support", but there
was no reasons for 3rd party software writers to chose an Atari platform
over any of the others available. "No software, no support" => no sales =>
less software less support.

Word Perfect did port their word processor, but it was a disaster. I think
they made a few wise assed<IMO> comments about only selling 1 or 2 copies
but getting hundreds of call for technical support.

I have several killer apps that I would buy a new computer for, but I do not
represent a large market segment. Mainly I would be happy with a two things
taking place 1) a bullet proof software distribution like Red Hat does with
Linux instead of having to wander all over the internet downloading crappy
programs that don't work or work together and 2) application software that I
actually use.

It could be simple, for instance I am using OE right now to compose this message. Now if there was a combination newsgroup reader, web browser, text editor, program editor, all rolled into one program vs having to load [Microsoft Word, OE, IE, Borland C++, ...] I would be happy. It is a major PIA to learn 6 different types of WP to do essentially the same tasks.

7095. WTB: Micro MainFrame disk drive

> just
>> puts more sectors on each track.

I believe the hardware is double density (the physical way data is stored on the disk). BUT the format isn't (the logical layout of the data on the disk). There were chipsets ("Doubler"?) one could use to replace the firmware/chipset and convert 1050s to use double density format.

Instead of using 256 byte sectors, an unmodified 1050 uses 128 byte sectors. Since Atari DOS only allowed 10 bits at the end of the sector for indicating the next sector in the chain, the firmware only allowed 1024 sectors on the disk giving 128*1024=128K(binary) capacity (nominal) (DOS did not see all those sectors) while in double density mode (with a firware upgrade) it has 180K capacity (single density is 90K).

Since the hardware (physical as opposed to logical format on the disk) is double density you have to use double density disks with a 1050 even in its "enhanced density" (what Atari called the format) mode (well, a single density disk might work - but is chancy).

7097. Skilled Programmers Needed!

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-16 00:00:00 UTC
From: Daniel Dallmann <dallmann@heilbronn.netsurf.de>
Message-ID: <3A14579F.AE90BB7@heilbronn.netsurf.de>
Source record: 40722

There is some work in progress to port LUnix NG (description below) to
8Bit Atari Computers (those with 65xx-CPU) - we badly need skilled
programmers (assembly language) to push the project.

LUnix (little UNIX) is an operating system for the Commodore64.
It supports TCP/IP networking (SLIP or PPP using a RS232 interface).
LUnix aims to look and feel like UNIX.

Some of LNG's key features (unordered)

Preemptive multitasking (up to 32 tasks, 7 priorities)
Dynamic memory management (in chunks of 256 or 32 bytes)
Runtime code relocation
IPC (inter process communication) through pipes
IPC through signals
(minimal) REU support
SCPU compatible
Hardware stack swapping (C128 only)
256K RAM C128 compatible
30 standard applications available
Support for standard RS232 userport interface
Support for swiftlink RS232 interface
Virtual consoles
Hardware accelerated 80 columns console on C128 in C64 mode
Native C128 version available
(simple) command shell (with history function)
Support for CBM (IEC bus) devices (e.g. 1541)
Open source, comes with all needed (cross-) development tools
Widely configurable for your needs
LNG can be terminal and terminal server (RS232)
Support for SLIP packet encapsulation over serial links
Support for PPP (packet encapsulation) over serial links
Loop back packet driver for off-line client-server trials
TCP/IP stack (and clients for telnet and ftp)
Support for the DFC77 receiver (radio-transmitted time signal in
germany)
Simple Webserver

Hello, my name is Benjamin Smith. I'm a Collector & Jaguar Game Player.
With all my games to play, I have no one to play Games with on my Atari
Jaguar. I live in Portland, Oregon. USA and I'm looking for Atarians to
play Jaguar Games with. You don't necessarily have to have a Jaguar.
Most any Atari will do. I'm thinking of starting Atari meetings in
Portland. Focused on Gaming but still supporting any Ataris. Call Ben
anytime at (503)256-9974 or E-Mail:

e-mail: atari@benjamin.net

If I'm unable to answer, leave a message and I'll call you back.

A dual-density is the same as double density, right? I saw a 1050, that
says dual-density on the box, I want to know if it's the same as double, or
I might get a drive I can't really use! :)

>says dual-density on the box, I want to know if it's the same as double, or
>I might get a drive I can't really use! :)

No :-(the "Dual" 1050 is NOT double density! It is some kind of hybrid format;
it still uses 128 (single) bytes per sector instead of 256 (double) and just
puts more sectors on each track.

Sorry...
-Ron

I don't have a solution but I admire the problem.

If you have a DOUBLE density Atari compatable drive,
i.e- Indus GT,Percomm,xf551,or U.S. Doubler 1050
and a 360k drive on your PC,Ataridsk (www.xlsearch.atari.org)
works VERY well.
You might have problems with 1.2m PC drives (so the docs say..)
360k drives are dirt cheap and U.S.Doubler (Video61)modified
1050s are the cheapest double density Atari drives.

I am using a PC with 360k drive and Ataridsk works (for me) with
both Indus and XF551.

You should format the disk on the PC and both PC and Atari will
read and write to the disk.Disks formatted on the Atari drives
won't work (for me)

I have found this combination very useful and faster than null-
modem transfers.
This has worked well for me and I hope this will help you.

It is an interesting phenomenon, I think, and it is all about eBay and the net -- at least in the U.S. Think of how many Atari computers have come out of closets and basements and attics and are being bought on eBay and its clones.

True, collectors are buying some, but if you look at the bidders, there are *lots* of different names. Some (different names) may be the same folks, but I suspect most are unique. Those who want a "retro experience" will mostly be disappointed -- at least those who have used systems like Super NES, N64, PS1 or (wow!) PS2. A lot of the new purchasers will put the A8's into new closets after a few weeks or months. But some will like what they see and want to learn more. A few will find something they need to do and write a program. Fewer still will find something about the hardware that needs fixing or improving and will start to tinker. But (I think) the net effect is that there is significantly more interest in the Atari (and probably the 64 and others) than there was two or three years ago. It will never again be 1982 in the heydays, but collectively we continue to push the envelope, find more PC items that we can adapt or merge into our A8's, the software base is ever-increasing, and so on. From my perspective, we have the best of Atari times.

a) Get a stock 1050 and an add-on solution like "Speedy 1050" (AFAIK
the ABBUC now has its hands on this one) or

b) get another drive like those already mentioned in this thread.

IMO: Don't trust them. I have both 40 track and 80 track 5.25" drives in my
ATR8000 and eventually the data gets corrupted when switching back and forth
between the drives.

I remember some of the spin going on though. I never really got into the
details myself, but one of the major complaints about the Jag was if it
really was anything other then a 16 bit system. I think what the arguments
boiled down to were that a 68000 was basically the main processor for the
system. Advanced graphic chips and all that, but everyone assumed you got
68000 coded games that didn't really take full advantage of the hardware.

It probably did have a lot to do with Atari being Tramiel run at the time.
If Nintendo would have come out with the same thing, it would have been
greeted as the greatest breakthrough in video games ever.

By the time the Jag was introduced, they had already pissed off every
supplier, developer, and retailer in the business. They shit their nest so
to speak. I've heard several stories about them doing the same kind of
'hardball' tactics they used for the Amiga developers to everyone. Stuff
like subcontracted software that they refused to honor the contracts on for
more then 10¢ on the dollar kind of thing. Same exact kind of BS "Since we
have the right to final approval, we will never approve it unless you drop

the contracted price by a factor of 10. Take our offer or lose everything."

Considering the amount of money they were making, not honoring their contracts was a majorly stupid move.

Out of curiousity,last night,I pulled the 360k drive from my Atari
dedicated PC and replaced it with a 1.2m drive.

Well..It made NO difference! As long as the disks were formatted
in Atari double density on the PC,they could be read and written
to by the Atari drives.

I guess the questions of differences in rotation speed or track
width are not that critical.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

I read a part of a thread and then lost it, so perhaps someone can clarify this. I think that I read that someone had determined that a compact memory card (such as for a digital camera) could be hooked up to an IDE drive interface to make a super-fast ram disk that would behave like a hard drive, only (presumably) much faster. Or was it that 2nd "Miller Lite" that did my brain in!

7127. Atari Basic Manual??

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-19 00:00:00 UTC
From: wristymark@my-deja.com
Message-ID: <8v8hs5$8uq$1@nnrp1.deja.com>
Source record: 40602

Hi, I don't know whether or not anyone might be able to help...

A few, okay, well *quite* a few years ago, I used to own an Atari 400 16K (subsequently upgraded to 48K), which I had several cartridges for, one of which was Atari Basic.

I recall having two books/manuals, one was specifically about (Atari) BASIC, and was probably about 1.5cm thick, slightly larger than A5 size, with - as I recall - a mainly white (other than the text!) cover to it.

The other was a loose-leaf reference manual, I think, which was probably about A4 in size (or the slightly-larger North American "version" of A4), had punch holes in it, and had a darkish blue cover.

I'm trying to obtain a copy of the former of these two, as it was my first introduction to programming, and I seem to remember it explained the concepts of programming very well, about loops, I/O &etc., and am in the process of having to try to explain about programming to some colleagues, who are not really from a programming background, but would like to learn.

Unfortunately, I can't remember the name of the book (although the FAQ mentions the Atari Basic Sourcebook, I'm not sure if they are one and the same), and although I've looked on amazon.com and found an out-of-print Atari book (which I'm not sure if it is that one either), I suspect that the book would no longer be available, unless it is gathering dust on a shelf somewhere in a corner in a bookshop in Silicon Valley, or on someone here's bookcase.

Does anyone have a copy of the book matching my description, which they might be prepared to sell for a reasonable price, or alternatively, if you think you have the book, could you let me know the title, author(s), publisher, and hopefully an ISBN or ASIN number for it?

Any help much appreciated.

Regards,
Mark

[And what happened to my copy? Well, I gave the 400, plus the Basic/Soccer/Space Invaders/Jumbo Jet pilot/Atari Internal Diagnostics cartridges, tape deck, Escape from Traam &etc. to a colleague at my old company before I left there 18 months ago; he since gave it to someone who I think he said is a serviceman, and has moved (back to?) the USA, but whose stuff would still be stored in a warehouse, if it hadn't been chucked out. I treat my books/manuals with a bit more care now.]

It might be this one: ATARI Basic, A Self-Teaching Guide. Authors:
Robert (Bob) L. Albrecht, Le Roy Finkel and Jerald R. Brown. Publisher:
John Wiley & Sons (address on back cover: 605 Third Avenue, New York, NY
10158), ISBN 0-471-06496-3. Copyright 1979. This book was published in
cooperation with Atari Corp. and came with my Atari 800 and the Basic
language cartridge which I purchased new from Spiegel mail order catalog
around 1982. The cover has a picture of both 400 and 800 keyboards on it.
Hope this helps.

Be Well.
Sam Staber

7129. Re: Need Atari 410 Program Recorder Repaired

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-19 00:00:00 UTC
From: Sam Staber <secretsam@earthlink.net>
Message-ID: <08SR5.7840$xd3.622859@newsread1.prod.itd.earthlink.net>
Source record: 40604

Thanks for your response, Bob. What is the phone number, or address, or website for B&C Computers? Ever since I first obtained my 410 program recorder, I have used Hi-Level Chrome/70us EQ tape, Maxell UD XL II, C90, to be exact. Recently, I read a warning not to use anything but Normal/Standard bias tape to avoid head wear and that is why I fear head damage. Do you know how I can tell for sure? Any leads on where I can purchase a 410 in good condition? I have been inside mine and replaced the belts once. I did not see a provision to adjust tension on them. I just like to keep my antiques in good condition! Plus, I have a lot of files on tape that I would like to archive to a more secure media. Once, I read an article in one of the Atari magazines about converting a conventional audio cassette deck to read and write Atari files and I would like to pursue that. Does anyone have any suggestions on this subject? As you can tell, my kind of tinkering is rather elementary!

Be Well.
Sam Staber

7130. FA: Broken Atari Lynx on Ebay

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-19 00:00:00 UTC
From: jeremyalansmith <jeremyalansmith@netscapeonline.co.uk>
Message-ID: <01c05246$235168a0$9868fc3e@default>
Source record: 40605

I can't find any atari.marketplace newsgroup, so I'm posting in this one.
Please don't flame me for it!

I've put a broken Atari Lynx up for auction. It's got a 6502 in it, so I
imagine it counts as 8-bit. :-)

http://cgi.ebay.co.uk/aw-cgi/eBayISAPI.dll?ViewItem&item=503609510

Cheers,

Jeremy.

7131. Q: Atari 400 cartridge door

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-19 00:00:00 UTC
From: ANDERS SKELANDER <anders.skelander@swipnet.se>
Message-ID: <kXVR5.3750$Sl4.15375@nntpserver.swip.net>
Source record: 40606

I had to open my Atari 400 yesterday. I noticed that
the cartridge door felt a bit loose. The reason was that
one of the L-shaped metal pieces that hold the cartridge
door had lost its screw. The screw was somewhere
deep inside the computer.

After having disassembled practically everything I
found the lost screw. The computer has been
reassembled and now everything works find
again.

But I have a question about the cartridge door.

The door has a spring at the right inner corner.
Thanks to the spring, the door moves to a fully
open state when its button is pressed.

It is the spring in particular that I need more
information about. One end (1) of this spring has
a little hook. I arranged it so the hook meets an
edge on the inside of the door. The other
end (2) of the spring rests on the metal box that
protects the inner part of the computer.

With my way of putting the spring in place, end (2)
of the spring is well visible on top of the surface of
the metal box when the door is opened. My feeling
is that this end of the spring should not be visible,
or at least it should fit in a hole or something like
that. But I cannot find any distinct place for the
spring to fit into the metal box.

Does anybody know more about the details on how
to arrange the spring? Thanks in advance for hints
on this subject.

Anders

7132. Atari800XL-Keyboard

Hi, I'm in Luton, UK.

I have an old Atari 65XE that I don't have room, or a use for.

The kit includes:

The console (has a slightly dicky power switch, but it does work)
Orginal 128k floppy drive, with a A/B side switch.
1020 printer
Cables
Loads of software, such as Pawn, Mini Office II, and others.

I don't want anything for it, just a good home. Free to any collector.

Cheers

7135. Is XL-it a Soundcard Killer?

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-19 02:26:13 UTC
From: DCM01@USA.NET
Message-ID: <3a173949.862839@news.CIS.DFN.DE>
Source record: 40745

I installed XL-it today, and my soundcard then crashed and wouldn't work. Coincidence? Maybe, but it seems like the last time I messed around with XL-it the same thing happened.

One way problems could occur is if there was some code in XL-it that made changes to autoexec.bat.

Has anyone else had soundcard trouble after using XL-it?

<ricortes@netmagic.net> drooled an embarassing wet spot in his lap as
he typed:

>I remember some of the spin going on though. I never really got into the
>details myself, but one of the major complaints about the Jag was if it
>really was anything other then a 16 bit system. I think what the arguments
>boiled down to were that a 68000 was basically the main processor for the
>system. Advanced graphic chips and all that, but everyone assumed you got
>68000 coded games that didn't really take full advantage of the hardware.

Well, apart from the 68000 being used for not much more than simple
program logic and input handling, few if any games ever _did_ take
full advantage of the Jag's hardware. A lot of that had to do with
the Jag's extremely steep learning curve coupled with poor developer
documentation and no support for C/C++ compilers, which I think is
what ticked developers off most about it. Nevertheless, it was a
64-bit system. The bus was 64 bits wide, and the custom chips had
full access to it which, by definition, makes a 64-bit system.

>It probably did have a lot to do with Atari being Tramiel run at the time.
>If Nintendo would have come out with the same thing, it would have been
>greeted as the greatest breakthrough in video games ever.

It was -- not directly because of the Tramiels themselves, but because
although they invested in advertizing for it, it was sporadic, brief,
and spread very thin. They spent a total of $25 million on
advertising, which is a drop in the bucket compared to the hundreds of
millions spent by Sony and Nintendo each. Hell, even 3DO and Sega's
Saturn ads eclipsed Atari's at the time.

>By the time the Jag was introduced, they had already pissed off every
>supplier, developer, and retailer in the business.

Partly; they finished the job when the Jag was released by forcing
suppliers to buy in quantity and not allowing exclusivity. Put
simply, they shoved the Jag into the hands of every supplier that
would take it, which bit into the profits of the bigger chain stores
that might otherwise have been a little happier to stock it.

>They shit their nest so
>to speak. I've heard several stories about them doing the same kind of
>'hardball' tactics they used for the Amiga developers to everyone. Stuff
>like subcontracted software that they refused to honor the contracts on for
>more then 10ï¿½ on the dollar kind of thing. Same exact kind of BS "Since we
>have the right to final approval, we will never approve it unless you drop

>the contracted price by a factor of 10. Take our offer or lose everything."
>
>Considering the amount of money they were making, not honoring their
>contracts was a majorly stupid move.

The Tramiels were famous for burning bridges. Then again, under
Warner's rule, things weren't much better, only instead of pissing off
retailers and developers, they pissed off staff. 'Course, that
actually ended up being a good thing, 'cos if it weren't for that, the
VCS would never have had third party support, and Activision would
never have appeared.

I guess it boiled down to Warner's screwups backfired on them but
resulted in _good_ things happening for the market at large, but the
Tramiels' screwups were just that... :-)

I dunno if this will help, but Sound Blaster Live! cards have certain
problems with DOS-based emulators that use Ron Fries' Pokey sound
libs. The solution is to reduce both your overall volume level and
your bass level to around 75% and sound will return to normal.

'Course, if you have utterly no sound at all, I couldn't tell ya...
but check your autoexec file and see if the BLASTER settings have been
changed. If they have, try resetting them to what they should be.

Source record: 40615
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

I received an e-mail from someone who is desperate to have old Atari 5 1/4 disks converted. If anyone can help please contact the person listed below.

I used to have an Atari word processor (dates back to 80s). I don't remember the model (it used to run on DOS). I have quite a few 5 1/4 floppy disks with a lot of text that I am unable to extract.

I went to many places and tried unsuccessfully to have the disks converted to 3 1/2 IBM floppies.

Can you PLEASE help? I am really desparate as I need to get that info from the the disks badly.

Is there a person or place in the San Francisco Bay Area (where I live) where I can have them converted?

please contact: cuulmann@hotmail.com

>CASINI, I believe; i.e. 3 signals are not included in the ECI or cart
>slot, but the interface works without them - I do not know why).

There is a better solution. Just solder a wire from +5V somewhere inside the computer to the right pins. I'm not sure which once, but I guess the 600XL has 5V on pin 47 and 48.

RAS and CAS are only needed if you want to use the 1064 (the 'turn your 600XL into an 800XL' that ATARI once sold.) It's needed for the RAM chips inside. There are ways around this if you want to add memory via the PBI interface. CASINI or EXT(oops, is the external enable or external select) isn't really necessary either. Unless you wanna switch ALL addresses to an outside device. I'm not sure if this can be done on the XE. (I'm not talking about wanting to do it, I'm talking about being able to.)

BTW the XE's have /HALT, so you could make an external RAM upgrade have separate ANTIC and CPU access.

>work in slot#3 of the Atari 800.

Have you checked out the addresses Sijmen's upgrade uses? Won't that cause incompatibilities? BTW I like Sijmen and he did a great job.

BTW Matthias Belitz came up with a great idea some time ago. Maybe you can join in. His idea was to have like an advanced SCSI Programming Interface (or ASPI) but including his IDE controller. It never toke off, become of the low resonance and the fact that he wants to finish his education. The idea was this. Why have a zillion different 'tools' for a 'zillion' different devices? Why not write one hardware specific piece of software per hardware device (BlackBox, MIO, KPI, MSC-IDE, etc.) and have the tools (which would then run with every device) be interchangable. If I'm not making myself clear, please say so.

Mindfield (mindfield@badgers.home.com) wrote:

: Well, apart from the 68000 being used for not much more than simple
: program logic and input handling, few if any games ever _did_ take
: full advantage of the Jag's hardware. A lot of that had to do with
: the Jag's extremely steep learning curve coupled with poor developer
: documentation and no support for C/C++ compilers, which I think is
: what ticked developers off most about it. Nevertheless, it was a
: 64-bit system. The bus was 64 bits wide, and the custom chips had
: full access to it which, by definition, makes a 64-bit system.

Ya, but when the Jaguar was still a viable machine, you could say this
until you were blue in the face, and there were idiots who would say, "The
Jaguar isn't a 64 bit system!", and even more idiots who would believe
them!

The Jaguar lost the public relations war, where perception becomes
reality. Hence there are idiots who still try and deny that the Atari
Jaguar is a 64 bit sytem.

7151. Where can I find an ATR of the game OGRE

I discovered that not only do you have to change the belts- I used
heavy rubber bands, you also need to apply rubber cement to the edge of
the large plastic friction wheel inside. The rubber/plastic drive wheel
seems to shrink thru age and this remedies the problem. With a couple
of rubber bands and rubber cement, I got mine working again. Be advised
that you have to desolder a few wires to get the clearance you need to
get in there, but this was easy as well.

>My Keyboard from the Atari doesnt work. The press on the Keys only from
>"ESC" to "6" have not an effect or reaction.
>Who know, whatï¿½s the Problem is?

One of the lines from the keyboard is not making proper contact to the keyboard connector; it is either damaged or loose. Same happened on my 800 with keys from "7" over to "Break"; difference is the 800 has a ribbon cable and heavy duty plug/jack whereas the XL has traces on a mylar sheet plugging into a type of edge card connector.

Good luck.

-Ron

I don't have a solution but I admire the problem.

To respond to this message, please use the enclosed link rather than your reply button.

Last Updated 11/20/2000
- Sold/Traded Items Removed

I have the remaining Atari 5200 items for sale or trade. I have decided to clear off all my spare Atari 5200 items, including some from my personal collection. All units are fully functional, cleaned and detailed, and in good or better condition. If you have any questions in regards to unit, box, or label condition, please feel free to ask. Shrink-wrapped cartridge orders of $60 or more receive free shipping within continental North America.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds., some prices may be negotiable. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please use this link to contact me jim_l@NO.SPAM.telusplanet.net?subject=Classics.Atari.5200 (removing the NO.SPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari/TI 99/4A), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

This list covers the following Atari categories:
- Controllers
- Shrink-wrapped/New Games
- Multicarts
- Atari Force Comics

Controllers for Atari 5200 & Computer Units
==========
These controllers are intended to use the standard Atari plugs, and require an adapter to work on the 5200.
- 2x Suncom Tac Joysticks $10 for the pair
- 1x Spectravideo Joystick with suction cup base

** Atari 5200 Titles - New/Shrink-wrapped**
==========
Shrink-wrapped cartridge orders of $60 or more receive free shipping within continental North America.
- Ballblazer by Atari/Lucasfilm $20
- Pitfall by Activision $15

- Rescue on Fractalus by Atari/Lucasfilm $25
- River Raid by Activision $10
- Space Shuttle by Activision $12
- Zone Ranger by Activision $10

Multicart Cartridges
==========
- Atari 5200 Multicart $125 - Contains all of the released 5200 game titles as well as demos and the 5200 diagnostic cart. Game selection is done by using DIP switches.

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- An original Intellivision keyboard for the original Intellivision
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

7160. Web Site "Downloader"

alt.atari.2600,alt.atari.2600.vcs,alt.games.atari,aus.ads.forsale.computers.used,comp.sys.atari.8bit,rec.games.video.atari

Atari 2600 - 128 built in games - boxed
PAL version - complete list of games available on the auction plus pics
http://cgi.ebay.com.au/aw-cgi/eBayISAPI.dll?ViewItem&item=502506767

from what I understand this was a last ditch effort by Atari to remain in
the games market, and was only released in Australia.

****
other A2600 games include

GALAXY INVADER - skull label (boxed)

F18 Vs ALIENS - ufo label (boxed)

CROSSBOW (boxed)

STRATEGY X (boxed)

SPACE GRID - skull label (cart only)

check 'em out from here:
http://members.ebay.com.au/aboutme/dijitoz/

(I have some strange NES carts as well if youre interested)

Howdy Lord, folks

>Thank you! Im looking for... :-)

Try Best Electronics at www.best-electronics-ca.com
And while your at it, make sure you order their Catalog. It has just about every thing (up to every screw) Atari ever make/used.

BTW are you an ABBUC member yet? We're an Atari 8 bit user group. Our 'head office' is in Herten, Germany. You'll get FOUR regular disk+paper magazines plus TWO 'sonder' disk+paper magazines for the price of DM60 per Year. Since your Email address ends with .de I guess you talk German? This helps, 'cause the magazines are in German. You can contact our president (and become a member online) at www.atari-computer.de/abbuc

Send him information about APE and an sio2pc cable.
http://www.nacs.net/~classics/
With a cable and a PC and the APE software you can connect your atari
and atari disk drive to your PC and transfer files to it. Some people
still sell stock 1050 drives for 20 - 25 bucks.

Another option is to get a hold of an OLD PC with a 360k floppy drive.
The older the better. But I forget the name of the program that can
read them. Anidisk or something like that.

I have a happy 1050 and a USdoubled 1050 and have been able to rescue
quite a few old disks.
Like Dr. Wacko's guide to basic game programming is now preserved
forever in an ATR file :)

I'd like to find out about the PC program that lets you read A8 disks.
Kinda curious though, what does it do with boot disks? What about stuff
in Sparta DSDD format?

I had a few old Atari 8-bit software and hardware forsale. E-mail me if you wish to purchase or if you have any question on the items forsale at gp429@aol.com --thanx
SOFTWARE: ALL $35
1) Flight Simulator II by subLOGIC
This is complete with the box, manuals and the maps. PRICE $15
2) AtariWriter w/Atari Proofreader Program and Dictionary by Atari
Includes the AtariWriter manual, cart. and quick reference card. I do not have the manual for the Proofreader and I will also send a copy of DOS 2 and a Typo Attack cart. PRICE $25
3) Movie Maker by Electronic Arts
This is an old school multimedia construction set. Included is the original packaging and the manual on how to use this once powerful application. PRICE $10
---Disk Games--- ALL $40
note:NO MANUALS
Sargon II by Hayden Software
--PRICE $3
Ninja by Mastertronic
--this game is also formatted for the C64 on the other side PRICE $3
Koronis Rift by Epyx & Lucasfilm
--PRICE $3
Mail Order Monsters by Electronic Arts
--this is a classic PRICE $7
Touchdown Football by Electronic Arts
--PRICE $3
One-On-One by Electronic Arts
--another classic w/ Magic Johnson and Larry Bird PRICE $5
Fight Night by Accolade
--PRICE $3
Spy Vs Spy by Avantage
--very fun for two players PRICE $5
Summer Games by Epyx
--an all-time classic PRICE $5
FlipTop Disk Case with lock and key
--5 1/4 disk holder has a grab bag of old saved games and various programs including 6 Antic Disks!
vol. 6 no 2 -Atari Animation
vol. 5 no 10 -Inside Atari
vol. 5 no 8 -"Shopper's Guide"
vol. 5 no 5 -Weather Pictures
vol. 5 no 1 -Anniversary Issue
vol. 3 no 11 -Practical Applications
and more misc. disks PRICE $25

HARDWARE: ALL $12
Atari 1010 cassette drive
--not sure if it works included is the power supply and data cable and
Conversational French program with workbook PRICE $7
Atari 1027 daisy wheel printer
--not sure if it works included is the power supply and data cable PRICE $7

7168. Re: Which is the best Atari?

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-21 00:00:00 UTC
From: "Steven E. Posey" <stevenNOSPAMposey@yahoo.com>
Message-ID: <8vf64s$4bd7a$1@ID-60478.news.dfncis.de>
Source record: 40639

I know this is an old thread, but in reading it, I couldn't help but mention that it also makes sense to have an "old" Atari AND a "new" Atari. My 800 is a great machine, and has been running solidly since 1981, but I also have to have my 130XE next to it when I want to run Turbo Basic XL, which benefits from the extra memory for a ramdisk. Plus, there are some incompatibilities when you want to run an older game that you really want to have an old 400/800 handy.

I also use the emulators on the PC at work quite a bit, and while it's great to have them, it's really not the same thing as a real Atari.

IMHO, the best Atari is a working Atari -- not like some of the Commodore and Apple doorstops I've seen!

Later!
Steven

There are really only two methods to move A8 to any other:
Use a PC util called MYUtil or A82PC to copy the files(MYDOS Dbl dens only).

or, the best way is to use a real A8 and null modem the files to the other
computer. This at least works for almost any file/any A8 DOS.

A8 emulators won't work well as they store the disk as an image.

I had a few old Atari 8-bit software and hardware forsale. E-mail me if you wish to purchase or if you have any question on the items forsale at gp429@aol.com --thanx
SOFTWARE: ALL $35
1) Flight Simulator II by subLOGIC
This is complete with the box, manuals and the maps. PRICE $15
2) AtariWriter w/Atari Proofreader Program and Dictionary by Atari
This includes the AtariWriter manual, cart. and quick reference sheet. I do not have the manual for the Proofreader and I will also send a copy of DOS 2 and a Typo Attack cart. PRICE $25
3) Movie Maker by Electronic Arts
This an old school multimedia construction set. Included is the original packaging and the manual on how to use this once powerful application. PRICE $10
---Disk Games--- ALL $40
note:NO MANUALS
Sargon II by Hayden Software
Ninja by Mastertronic PRICE $3
this game is also formatted for the C64 on the other side PRICE $3
Koronis Rift by Epyx & Lucasfilm
PRICE $3
Mail Order Monsters by Electronic Arts
this is a classic PRICE $7
Touchdown Football by Electronic Arts
PRICE $3
One-On-One by Electronic Arts
another classic w/ Magic Johnson and Larry Bird PRICE $5
Fight Night by Accolade PRICE $3
Spy Vs Spy by Avantage
very fun with two players PRICE $5
Summer Games by Epyx
an all time classic PRICE $5
Flip Top Disk Case with lock and key
5 1/4 disk holder has a grab bag of old saved games and various programs including 6 Antic Disks!
vol. 6 no 2 -Atari Animation
vol. 5 no 10 -Inside Atari
vol. 5 no 8 -"Shopper's Guide"
vol. 5 no 5 -Weather Pictures
vol. 5 no 1 -Anniversary Issue
vol. 3 no 11 -Practical Applications
and more misc. disks PRICE $25
HARDWARE:ALL $12
Atari 1010 cassette drive

not sure if it works included is the power supply and data cable and
Conversational French program with workbook PRICE $7
Atari 1027 daisy wheel printer
not sure if it works included is the power supply and data cable PRICE $7

7172. Emulator supporting 2 PC-Sticks ?

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-22 00:00:00 UTC
From: geyer@mpia-hd.mpg.de
Message-ID: <8vg970$6j4$1@news.urz.uni-heidelberg.de>
Source record: 40497

Hi there !

Is there any Atari emulator (PC) that supports 2 PC-Joysticks ?
I am using some cheap PC game pads as an 'adapter' for
my digital joysticks and a Y-connector to the
PC game port.
Sadly, atari800 and XL-it see only one or are
only able to handle one stick.
Vice, the C64-Emulator (oh no, I am _not_
a C64 freak ;)) works well with this configuration.

Joust must be played by two players with digital
joysticks :-) ...

Bye & many thanks,

Michael

>with these and have a name of one or two?
>Thanks,
>Larry White

GetRight, in addition to being a download manager, also features a
"Browser" that lets you go through a page's files and tag them for
download. Be warned though; if you use it unregistered it installs
Aureate/Radiate spyware when used in "free mode" (which deletes itself
if you register).

I know that any 8k game for the Atari 2600 use bankswitching (anybody knows that :-))) since the Atari2600 can only address 4k.... I am using an 8k EEPROM in my universal cart where I can put either 4 games of 2k each or 2 games of 4k each (with no bankswitching).....

Hi there!

Some of you might remember me asking for this and that Epyx game some tme ago. This was all for my Epyx Shrine.
I've finally decided to put it online right now, even if it's far from finished. Actually the only game page I've halfway completed so far is the one about Star Fire (It's 80% looking like what I want it to). But it'll give you a thought, of what the shrine will look like in the future.

In order to focus on the most loved Epyx games I'll do some polls, which you should participate in order to get the pages of your favourite games going faster.

And I've set up a messageboard too, where all fans of Epyx games can discuss.

If you like the page about Star Fire, there's definitely more to come, I've interviewed over 20 former Epyx artists & coders so far and researched a lot about most Epyx games.

If you loved Epyx in former times, help to make this page big and well known.

Here you go: http://home.germany.net/101-36834/index.html

Greetings,
Manuel

P.S.: (You'll find more about my Star Fire 2600 Project there as well.)

7183. Using 30pin SIMMS on 8bits?

Newsgroup: comp.sys.atari.8bit

From: Curt Vendel <curt@atari-history.com>
Message-ID: <3A1C415C.93C300B8@atari-history.com>
Source record: 40508

Hi,

Anyone ever mess around with using 30pin simms on an Atari 8bit, I
was looking at the pinouts: http://wired.hard.ru/data/co_Simm30.shtml
and if the parity pins are n/c then it looks like it shouldn't be a
problem to work with, 30 pin 256K simms are absolutely dirt cheap, so
anyone ever try this or interested in working with me on this?

Curt

A Happy drive enhancement can read or write PC SSDD diskettes with any A8 DOS.

>A8 emulators won't work well as they store the disk as an image.

There are utilities to extrack files from the images and convert the ATASCII
carriage returns.

-Ron

Inform everyone that communications have completely broken down.

Message-ID: <CPXS5.302742$4d.37994938@news02.optonline.net>
Source record: 40511

I used an Okidata Microline 320 (a 9-pin dot matrix printer) in Epson mode with my Atari 8-bit for many years. I gave it to another club member when I gave my Atari systems away, and to my knowledge, she's still using it. The Okidatas are built like tanks. Before I had the 320, I had to struggle with the old Microline codes on my 92, which finally burnt out a print head after it, too, had run for many years.

To the best of my knowledge, an improved 320 is still being made.

In general, if you can find a nine-pin dot matrix printer, Epson or Epson-compatible, it would work better with an Atari than a 24-pin dot matrix printer for printing graphics. The 24-pin printers have better resolution than the 9-pins, and produce better NLQ text, but the proportions in the graphics (if you can get them to print graphics from an Atari) would be off.

Can anyone tell me what part numbers equate to u8, u7, and u22 un the 130xe?
I am truing to fix a seriously stuffed one. Are there any common drama's
with these?

Also a list of 800XL and 130XE chip numbers and names would be helpful. I
have sort of figured 800XL: GTIA-u17-co14889, Antic- u7 - c014887, pokey u22
co12294, 6502 u8 co14806, and PIA u23 co 14795. How am I doing so far?
Actually schematics would be very helpful.

Mark

Hi Mark,

Your doing good, lets see...

U8 is C014806 which is the 6502C
U7 is C021697 which is the Antic
U22 is C012294 which is the Pokey

The rest of the custom ic's are:

U6: C061991 Freddie
U17: C014805 GTIA
U23: C014795 PIA6502 (Not custom Atari, Commodore calls it a VIA (Versital Int. Adapter)
U5: C0615988 XL/XE OS
U4: C024947 Atari Basic Rev "A" (man, that kills me, everything else is the latest and they stuck a 6 year chip into the machine, probably a HUGE stock of Rev A. chips were lying around, so they just used them up)
U24 & U25 are keyboard controllers (Generic chips)
U3: C061618 XL/XE Memory Manager
U34: C025953 (Don't really know what this is, another memory chip to bank select? Its only in the 130XE, can anyone answer this one?)

Sam,most brand name dot matrix printers have an Epson mode.You should
be able to pick up a used Epson or Panasonic printer for little
money.
I use a Panasonic 1091 and an Epson Stylus 800 (older model inkjet)
connected with an A-B switch to the 850 and both print well,using the
Epson driver.I bought both printers at the thrift shop for less than
$10 each.You should have no trouble finding a printer you can use.
(BTW..I have an FX-100 that has power supply problems you can have
free..but I live in Maryland..:( )

Hi !

I've been working for several months on software and hardware to put Atari 2600 rom files (.bin) into a home made cartridge containing a 8k EEPROM. The software and hardware let's you dump any Atari 2600 cartridge to a .bin file, and put any .bin (with no bankswitching) into the EEPROM of a "Universal Cartridge". This is still at the development stage and I don't want to release it, but if you want to have a look of what I have done, let me know...

Emmanuel F.

>
<snip>

The program referred to is called Anadisk as in to analyze a disk.
It runs in real DOS mode on a PC and is quite powerful and full of
features. Unfortunately, at least on my PC, it won't read a disk
written by my 1050s for anything. It seems to be locked into insisting
on the beginning of a track being under the index hole and when that
situation does not occur, it fills in data with sector data that just
doesn't exist, rearranging sectors along the way. A companion program
called Deana then takes a disk scan created by Anadisk, flips each byte
of data, writes a header and turns the disk scan into an .atr image.
But since I can't gather valid data, I don't get a working atr.
Perhaps those who claim success with Anadisk will enlighten us with
some PC specs, in particular the exact 5 1/4" drive they are using. I
also wonder if a disk written by a XF551 drive would be readable on my
PC as the 1050 ignores the index hole altogether and also runs at a
different RPM thus scattering sectors willy nilly according to the
index hole, but the XF551 might have the capability to write an Anadisk
readable disk as it uses a PC style drive mechanism.
If readable, boot disks would be converted into atr files and the
same is true of Sparta DSDD. Anadisk can be set to read either one
side or both, but since I can't get there from here, I don't know if
Deana can convert such a file into a valid atr.
A PC program that does work for me is Util by Charles Marslett of
MyDOS fame. With the proper command line invocation it will format a
MyDOS double density disk in your PC that you can then use to transfer
files back and forth between the PC and your Atari. This would
include .dcm files of boot disks and then there are PC programs that
will take a .dcm file and turn it into an atr on the PC ready for
emulator use. On the Pool Disk Too set one can find a version of Util
written to do it in SpartaDOS format instead of MyDOS. Search this
message group for Pool Disk and you should find an email address to
inquire about purchasing the two CD disk set for yourself. Included is
all the above programs with a documentation file on the Util programs
that explains the various switches to use, with examples much better
than the original release does.

A couple of sites that also contain some of these files are
http://www.umich.edu/~archive/atari/8bit

Every 8K cartridge in fact does bankswitching, so you can't put any 8K
game on your cartridge with this device, I'd say.

Greetings,
Manuel

7197. Which Printer for the Atari 850?

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-22 04:02:04 UTC

I have been using the Epson FX-100+ on my Atari setup for over fifteen years. The printer finally failed and it is not practical to fix it. I am accustom to using this setup and the Epson printer driver for my model is available in my word processor, The Writer's Tool. I want to know if there are any new printers available that will work with the parallel port of my 850 Interface and if they needed some special driver for this type of setup. I really would appreciate some guidance on this situation.

Be Well.

> games of 4k each (with no bankswitching)......

I have done a couple of carts for the 800 etc. they used 2 64K eproms.
One for 8k games and the other for 16k games. For the 8K one, I added
a NAND gate to select one eprom for the lower 4k and the other for the
upper 4k, the 16k games one was simple.
Had to add some dip switches to select which game I wanted. If affect,
it is bank selecting. Is this how you are doing the 2600 cart?

This is the memory bank select chip. A lot of people think freddy does
the bank selecting but in fact it is this one. Freddy is nothing much
more then a memory controller. It saves a bit board realestate
compared to the xl line. also the main clock crystal is connected to
freddy.

For faster service, Please direct all replies through E-Mail to Ben at:
atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I
am swamped and I find it hard to keep up with reading the NewsGroups.

Hello, my name is Benjamin Smith. I'm a Collector & Jaguar Game Player.
With all my games to play, I have no one to play Games with on my Atari
Jaguar. I live in Portland, Oregon. USA and I'm looking for Atarians to
play Jaguar Games with. You don't necessarily have to have a Jaguar.
Most any Atari will do. I'm thinking of starting Atari meetings in
Portland. Focused on Gaming but still supporting any Ataris. Call Ben
anytime at (503)256-9974 or E-Mail:

e-mail: atari@benjamin.net

If I'm unable to answer, leave a message and I'll call you back.

Hello!

Recently there was some discussion about serials of Atari chips.
I put all the numbers I could find on my web page.

If you want to submit some info to make it complete, I would be
interested in:
1) model type
2) TV standard
3) all the COxxxx numbers of all chips
4) number and size of memory chips
5) serials and frequencies of crystals
6) serials of system board

> screen and code to do it.

Hello Raphael,
first of all, thanks for the job you have done. Now, on with the
critics:
I tested the JPG viewer and it works, but as a user I would like to have
some more comfort. How about implementing a little menu, that has the
following options: 1) Directory listing (lists dir of any drive D1: -
D9:)
2) Load Picture (JPG format)
3) Save picture (Micropainter/62 sector format)
4) Quit to DOS (any DOS should work!)
Once, a JPG is loaded it should be possibble to get back to the menu
with one keystroke. Allthough, the docs say I can press Return, ESC or
space to return, this did not work (the screen went black/blank) so I
had to re-load the viewer again to load another JPG picture... Ok,
enough of this. Just a few examples what could be done (i.e. updated).
Maybe someone is willing to do it. Unfortunately I am not a programmer,
so I can`t !! greets - Andreas

Yes, you're right, a better user interface is needed (someone else
suggested it too), so I've added it to my list of things to do =)
The list currently looks like this:
1) Get the colour jpeg decoder working - I've started on this one, and
it is almost there I think
2) Try to get progressive jpegs working (they don't work on the
current viewer, but can be converted using jpegtran on Unix/Windows)
3) Look into an extended memory version
4) Improve the user interface

But the source code is on the web now
(http://www.geocities.com/rjespino/atari.html) so if anyone feels like
having a stab at it then they're more than welcome.

That does sound like a bug somewhere. What version of the viewer
were you using? Was it the one with the 3 options (the beta version)
or the newer version with 7/13 options? What DOS are you using? I'm
pretty sure that it works under MyDOS 4.5, but I've not tried it under
any other DOSs. The 64K display modes in the newer version won't work
with any DOS that uses the RAM under the OS, but if that isn't the
problem then it is a bug.

> Ok,
> enough of this. Just a few examples what could be done (i.e. updated).

Error! But, you might want to try dyndns.org. I've been using it for
a couple of years now ... it's sort of the successor to the old
Monolith (ml.org), and it's free (or extra services for a donation).
I've rarely ever had a problem with it in all the time I've been using
it.

There's also dhs.org, which I understand is good, but I've never tried
it myself.

Raphael, in my opinion you should move the user-friendliness issues to the top of your list. The success of most software depends on user-friendliness. If you look at a company like AOL they became the success story of the 1990's because of user-friendliness.

I understand if the color jpeg feature is almost there you might want to knock it out, but after that ease-of-use is going to determine hwo many people use your program.

I certainly know you are doing this for your own personal enjoyment and I'm not saying you owe anybody any more hard work, but you did say comments were welcome!

Thanks!

7222. Stereo XL on 800XL Help needed!!

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-24 19:47:03 UTC
From: Dana Eckel <deckel@info-link.net>
Message-ID: <XAzT5.597$_u1.55550@news7.onvoy.net>
Source record: 40541

Hey all, I need some help here. I am working on the Stereo XL by Chuck Steinman on my 800 XL. I have made it to step 2h and I figured it would be a good time to check it out to see if the new Pokey was working with the system.
I plugged it in and turned it on. Good news is my old pokey still works great, and when I read the memory locations of the new pokey they arn't exact shadows of the old one.
Problem comes when I read the Random number generator at location 53786. I get the number 255 all the time. When I read the pots I get a value of 16. Did I remove the wrong 3K resistor? I took out R74.

Thanks for your time,
Dana

The old Epsons and Star Geminis and Panasonics are the easiest to substitute
for the FX-100, but don't count out the 24 pin models. My Epson AP-3250 24 pin
will do 9 pin or 24 pin graphics; I had to write a new 24 pin byte rotate
routine, but the ATASCII listings are every bit as good as output from the G:
device.

Yep, me too! The guys on Long Island have been meeting in each others
homes, and may continue to do so after the official close. But the
discussion these days is 85-90% PC, and I'm turning out to be the wise old
man because I have a few years on them in that department.

But, if you recall, LIAUG became a PC user group. It's now the
Nassau/Suffolk PC User Group, and I take as many local OHAUG guys out there
with me for meetings as will fit in my car. They're learning quite a bit
from those trips.

IIRC, such a driver does exist someplace. Also, the earlier Epson Action
Lasers worked fairly well.

Source record: 40550
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,alt.games.atari,comp.sys.atari.st.tech

atari folks,

Advice wanted: 2 atari game consoles not working.

I've have 2 Atari 2600 game consoles which I just brought out of storage. Neither of them work now, but both used to work at the time they were stored. Anyone have ideas on what component(s) might go bad after 15 years of storage?

Symptons:

1. When switched on, the TV turns from white snow to a mostly blue-ish snow (there are a few other colors visible). The sound is silent.

2. Sometimes removing the cartridge (and yes, breathing into it) & re-installing the cartridge causes small artifacts on the screen, but the screen is primarily snowy. Sometimes I also get a low frequency hum or beep.

3. When I remove the "TV-Computer" switch, and then hook the console's RCA out directly to the TV's antenna leads, the outcome is the same.. (This was done to test the continuity of the "TV-Computer" switch - apparently its OK).

Might any of you have any similar experience? Are there any common problems with stored atari systems?

Is it likely the cartridges went bad? (Unfortunately, I don't know anyone else with a working atari to test)

I'm armed with a philips screwdriver, a soldering gun, and I'm not afraid to use them :-) Any suggestions would be greatly appreciated. You may email me directly, or simply post. Thank you.

Hi, Alan. I was sorry to see the last Ol' Hackers newsletter in the mail
the other day. I'm gonna miss 'em.

I agree with you about the printers. I had a Gemini 10X, an Epson LX800,
and a Star NX-1001 on my 8-bits, and they all worked fine. All were
9-pin printers. The Gemini wasn't completely Epson-compatible, but most
word processors had a 10X driver readily available. I bought the Gemini in
1991 for $20, one LX800 in 1994 for $20(lost it to lightning in 96), the
NX-1001 in 1996 for $15, and another LX800 at a garage sale in 1998 for $5.
All but the first LX800 work perfectly even yet.

If you could find an HP Deskjet, Deskjet Plus, or Deskjet 500 with the
Epson Emulator cartridge, that would work, too - and the quality would be
much better than what you're used to. I used to prepare pages for our
newsletter with my XE, print to disk with an Epson driver, and upload
them to our editor to be printed with his DJ500. Worked great. They can
print straight ASCII text without the cartridge, but AFAIK no Deskjet
drivers were written for 8-bit programs.

Wow! After a very long hiatus, I've decided to rejoin the folds of the Atari 8bit community.

Some of you newcomers may not know me - some of you old timer`s - glad to see you again!

Since I was last online, I installed a full Frame Relay T-1 to my home, setup a dedicated FTP and email server, etc, etc, etc..

Yes, my profession relates to high end networking (Cisco routers, frame relay, VPN, network security, encryption, etc.)

I'll be putting my FTP server up for all of you to access -- there's about 700mb of Atari 8bit files. If interested, send me a note to jeking@NOSPAM.xmission.com (remove the NOSPAM part).

Keep posted for my Atari 8bit website - with cool screen shots of my awesome 130xe (576k \ Bob Puff modified) w/Black Box, etc.. system!

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

Well, here's what my Win2K SP1 install has:

STDOLE2.TLB 2.10.3029.1
PICCLP32.OCX 6.0.84.18
MSWINSCK.OCX 6.0.88.4
COMCTL32.OCX 5.0.38.28

FYI: COMCTL32.OCX did not originally exist on my system - I had to go grab it from Microsoft's site. Surprisingly, it's not included in the downloadable VB5/VB6 runtime package. You might want to include it (or a URL to it) with AT1.

Anyway, I haven't found a solution to the problem as of yet. I'd love to troubleshoot this with you if you'd like. Please contact me via email.

Thanks,
Oscar

I have never owned a 65XE until recently. I believed that I had read that the 65XE did NOT have the PBI (only the 600XL, 800XL, and 130XE in the U.S.). But this 65XE has a fully functional PBI, and it definitely is a 65XE. Can anyone clarify this?
Larry White

7236. Re: 65XE with PBI

Source record: 40558

Larry,

The majority of the 65XE did not have a PBI, but Atari did make some
that did have it. I never opened mine to see if it was just a 130XE
without the second bank of ram, or what was inside. Probably not many
of them around though.

John

I am looking for any Atari 8-bit Ultima game complete, Alley Cat complete, Archon II complete, Super Zaxxon loose cart, and Satan's Hollow loose cart.

I have Atari Jaguar Aircars shrinkwrapped, Jaguar Battlesphere like new complete, Atari 8-bit Hypnotic Lands cart with manual/leaflet, Colecovision Slurpy with manual, Colecovision Q-Bert's Qubes near mint with manual ALL ORIGINAL!, Colecovision Mr. Do's Castle complete in like new box, Atari 2600 Crazy Climber, 2600 Rubik's Cube, 2600 Pengo like mint w/manual, and other stuff.

Please only e-mail me if you have something I need and want to trade, and don't try to trade me Super Zaxxon for everything on my whole trade list, we need to remain reasonable and trade one/one equal rarity/value. ;).
Thanks! -Satcom2

7238. Dead Basic XE's

I have recently encountered my second "dead" Basic XE supercart. That's 2 out of 5. The usual stuff like cleaning the contacts and reseating the ROM/Eprom does no good. Anyone have any experience or an educated guess about what dies in these things? My original cart that I bought new is still going strong. Although the case is a little the worse for wear. But I have improved my case surgery technique over the years... :-)

To respond to this message, please use the enclosed email address rather than your reply button. Dealer enquiries are welcome.

- Last Updated 11/25/00
- Sold items removed

I have a limited amount of brand new Atari Jaguar items for sale or trade (these are not refurbished units). These packages are ideal for new collector's or somebody wanting to start or add to their Atari collection. If you have any questions, please feel free to ask. I am also willing to trade for certain items, please see my list at the end of this post. All prices quoted are in U.S. funds with the buyer paying shipping.

If you are interested in any of these items, please respond to me by using this automated link jim_l@NO.SPAM.telusplanet.net?subject=Classics.Atari.Jaguar (removing the NO.SPAM. first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

** Atari Jaguar Packages - Brand New (with controller, RF Box & AC adapter)**
==========
-.Atari Jaguar with CyberMorph cartridge and Composite Video Cable $45
- Atari Jaguar with CyberMorph cartridge $35
- Atari Jaguar (No Cart) $25

** Atari Jaguar Accessories - New**
==========
- Team Tap (4 Player adapter) $20 - 2 units left
- Jaguar unit alone (No power supply, controller or accessories) $20
- Composite Video Cable $15
- Spare Controller $15
- AC Power Supply $10
- RF Switch Box $5

** Atari Jaguar Games - New/Shrink-wrapped**
==========
- Checkered Flag $10
- CyberMorph $5 (No Box)

Atari Force Comics Please make an offer
==========

All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- An original Intellivision keyboard for the original Intellivision
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

Please forgive me if there is a sound of contempt here, but I just
can't stand lamers who brag about their jobs as 'IT professionals'.
Most are nothing but web page designers that can barely code HTML.
I didn't start this forum, but from what I can see is that it is a
sanctuary for those who love retro computing to escape the world of
business2business nerds. I fail to see how your home T1 (ridiculously
overvamped) can benefit the 8bit community. I first accessed the
'internet' in 1979 on a 8bit machine running at 300 baud. Back then
there were no Javascript applets, banner ads, pepsi.com, or anything
else that even suggested spending money. Nowadays thats all the
internet has become- one gigantic freakin commercial! And it's people
like you sir (your probably still in your 20's by the look of your
posting signature) that are nothing but big fat ad execs- trying to get
the little people to spend their money on your crappy product! I
digress- as for your 700 megs of atari files, I've already downloaded
over 800 megs from various 'true enthusiasts' sites. These sites show a
general love and caring for the old machines and their focus is not on
how fat of a wire is drilled in their bedroom wall. I noticed that you
had to have somebody else modify your 8bit with 576k. You must have
been real clever to pull that one off... Most everyone I know that are
'true enthusiasts' do their own mods. And even more importantly what is
the purpose of 576k in a 130xe anyway? There was never a line of code
written for an xe with that much memory, do you write your own 8bit
code to take advantage of that memory? I doubt it. I guess the only
purpose for that would be to show off, just like that T1 connection
next to your vanity table. No hard feelings, I just hate 'IT
professionals'.

I believe both features and user interface should be good. After all, ease of use is nothing if you can't use it for what you want/need it for. :-)

CU Mathy van Nisselroy (who really wanted a GOOD JPEG
viewer (like this one) and is really happy now and is waiting for somebody to write him a NetCam driver. He has no use for such a thing except that he wants to be able to say it: "see, that can be done on the 8 bit Atari too"

7248. My page updated!

Newsgroup: comp.sys.atari.8bit

From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <3A2237CB.63645671@asw.cz>
Source record: 40575

Hello!

I've added schematics for Turbo 2000 datasette upgrade.
I also remodeled 'cartridge' page a bit, HTMLized John Picken's article
about XL/XE memory and added another article about OSS supercarts.
Not mentioning the 'chips' page I announced previous week.

From: nisse-ma@reze-1.rz.rwth-aachen.de
Message-ID: <8vteceatt8@nets3.rz.RWTH-Aachen.DE>
Source record: 40577

Howdy Curt

> Cool, 1MB? Hey, where is Bob these days, hey Bob!!! Where are you???

I'm working on a 1MB upgrade which uses 30 pin SIMMs. It's 99.9% 130XE compatible. You will be able to use the separate ANTIC and CPU access, don't need a lot of switches or lose BASIC or the SELFTEST or Missile Command (on the XEGS). What you won't be able to do is switch BASIC and the OS ROM around WHILE ACCESSING THE EXPANDED RAM.

CU Mathy van Nisselroy

PS soldering wires to 30 pins is NOT fun.
PPS ok, ok, so we only need 27. Or actually only 25.

Hello Raphael,
the posting refered to the older version (0.1 or so) which only supported 3 modes. Now, the newer version (0.3) is much better and has less bugs. I would still like to have a menu that includes a directory listing and a Micropainter (62 sector format) save option for non-interlaced modes. greets - Andreas

Well,
all PAL XEs Atari made do have the PBI. Maybe you found a PAL version
(or there are also some NTSC versions that include it). -Andreas

7257. Fast sector copier

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-27 00:00:00 UTC
From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <3A225158.8DEE39FB@asw.cz>
Source record: 40584

Hello!

I'm looking for fast sector copier. It should:
1) read SD, MD, DD diskettes and automatically recognize them even on
XF551
2) skip invalid sectors
3) display its progress
4) read in fast XF551 mode
5) use extended memory (130XE is okay)
6) write in 'normal' speed (I don't have registered APE)

If you have a PR:C or 850 and/or BlackBox, just null modem the files
from your PC to your 8bit.. Easier than trying to do the diskette
thing.

Piotr Fusik <pfusik@elka.pw.edu.pl> wrote:
: On Mon, 27 Nov 2000, William Kendrick wrote:

:> I'd like to see Atari800 support a 2nd firebutton on PC joysticks
:> (they can be interpreted by the emulated Atari in the same way that
:> the "C" button on a Sega game pad is... as one of the paddle pots).
: You press 2nd button and PADDLE(0) is zero?
: I've heard right button in ST/Amiga mouse can be handled this way, anyone
: knows about it?

As seen in GEMDROP.ACT:

```
If PADDL0=228 And Controller=SEGA Then SegaFire=0
Else SegaFire=1
Fi
```

The "0" and "1" here are meant to duplicate the meaning of the STRIG's.
So, if PADDL0=228, then that means the "C" firebutton on the Sega Controller
is pressed.

I always used CopyMate 4.4. At least I _think_ that was the version number.
Definitely does 2, 3, 5, and 6 above. I don't know about 4, my XF551 was US
Doubled.

I don't think you'll find one program that's best at all three densities. In
the (rare) case that I had to copy a dual-density disk, I used CopyMate 3.7
instead.

Good luck!

Well, I had the same problem with Rally Speedway. It just wouldn't work. I have no idea what made it not work, but tested to put the cartridge all the way in and wriggling it out a little bit and now it works.

Made the contacts doesn't meet the contacts inside the computer ?

Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari

I was just playing around with version 1.0.4 of "Atari800," the excellent
Atari 800 emulator (works with Linux! ;)).

I noticed it has a new "interlaced screenshot" feature, so I couldn't
resist making new shots of my interlaced game, "GemDrop."
(My old images were mostly digital photo stills of a TV... ick!)

See them and enjoy!

http://www.newbreedsoftware.com/gemdrop/

And if you have Linux, Windows, MacOS or BeOS (and a development environment),
don't forget "GemDropX," the C port of GemDrop (which was originally
written in Action!).

: Hello group,

: in your opinion which is the best Atari computer to get? I have never had an
: Atari system and was thinking about getting one. Which is better, the 800,
: 800Xl or 1200XL?

The 1200XL has the best keyboard and case of them all. Lotsa room under
the hood, the nice "wrist rest" which most PC keyboards still don't have(!!)

The OS is a little borked, though, so it's best to replace it with a newer
(later XL or XE) OS, or one of the spiffy and featureful alternative OSes
out there.

What should be PADDL0 if the button is not pressed? I see anything
except 228 works with GEMDROP, but I'd like to know the real value to
be put into emulator (is it 0?).
Can anything more be read on Sega Controller? Only joystick+fire and
"C" button? I guess the controller has lots of buttons. :)

I don't remember. I _think_ it's set to 0 if the controller is plugged
in and the C firebutton is up. (This can be a useful way to detect
whether one is hooked up when the game starts.)

Without any other hacking, a normal Sega Genesis controller works fine
on an Atari, and you can detect the directional pad (stick), B button
(fire) and C button (paddle0 low/hi).

Howdy Mark

If you have a scope or have a buddy (m/f) who has one, get yourself SAMs 130XE service manual. Either via http://www.best-electronics-ca.com or via (if a xerox-copy is enough) j.kuep@gmx.de. He does the 'schematics service/Bauplanservice' for the ABBUC (http://www.atari-computer.de/abbuc).

I got them via Joost Kuep. Haven't tried them because I don't have a scope, but it looks like SAMs manuels could really help out here.

I'd just about bet it isn't socketted either.

If the thing hasn't seen a lot of use lately, I would first leave it on overnight then try rebooting it.

In my personal order of things to look at, it would probably go something like RAM, GTIA, ROM, CPU. If the CPU is Rockwell made in Mexico, I would move it to the top of the list.

The reason for this is the GTIA generates the system clock which feeds directly into the CPU. The "brief sync signal" you are seeing is probably the system running long enough to get started =>out of ROM, but crashing when it starts making use of RAM. There are still half a dozen other things that could do the same thing, but that is the most likely candidate.

On a working 8 bit you can actually remove the PIA and POKEY<?> and they will still boot.

Don't get me wrong, I'm not saying user-friendliness is unimportant, I have been tweaking the interface as I've been going along. A simpler friendlier interface would be good, especially for those who don't like command line interfaces. How about some sort of menu system where you just select the jpeg file from a list and then choose a display option from a small menu? Ideally how would you like it to work?

The flip side of the coin is that it would need a rewrite, and I tend to like command line interfaces with millions of obscure options (that's my Unix background showing through), so I might not be the best person to write a user-friendly interface.

The way it has been designed is that it is relatively easy to put a new front end onto it, and there are plenty of people that could do a better job than I could in a fraction of the time. So I guess I'm really hoping someone might jump in and do it (nudge, nudge, hint, hint =) But if no one does then I will have a stab at it.

> I understand if the color jpeg feature is almost there you might want
> to knock it out, but after that ease-of-use is going to determine hwo

I think it will now produce the data for the image in RGB format, but that still has to be displayed on the screen, and is going to take a few more days work.

> I certainly know you are doing this for your own personal enjoyment

Well for my enjoyment and that of the whole Atari 8-bit community as a whole really. I'm happy to put the work in as long as I've got the time and energy to do it. Thanks for the comments, they are appreciated, keep them coming.

There's an article about the service at
http://www.atarimagazines.com/v4n6/GamesComputers.html

The article has the company's address and phone number as of 1985. They
almost certainly don't work any more, but you might want to try. If you
manage to contact the owners, let me know.

I never used the service, but oggled the magazine ads.

Sounds like the power supply may have given up the ghost. Try another
supply, or at least make sure the supply is putting out 9 volts AC.

Other than that, one of the regulators on the mainboard may have died.
Not a MAJOR project to replace, but you do have to know how to solder
and desolder.

Looks like tarnish has built up on trace 2(two) enough to
break the connection(or cause high resistance), on the cable
to the pcb connector or at the fold in the mylar. While an eraser will
clean
the tarnish off, a silver circuit pen is needed to repair the trace
(or get an XL and swap keyboards). A lightbox is helpful to find the
break.

7290. Flight Sim II @ $15 and more For Sale!

Newsgroup: comp.sys.atari.8bit
Date: 2000-11-28 02:12:15 UTC
From: gp429@aol.com
Message-ID: <20001127211215.12058.00002233@ng-cj1.aol.com>
Source record: 40447

I had a few old Atari 8-bit software and hardware forsale. E-mail me if you wish to purchase or if you have any question on the items forsale at gp429@aol.com --thanx
SOFTWARE: ALL $35
1) Flight Simulator II by subLOGIC
This is complete with the box, manuals and the maps. PRICE $15
2) AtariWriter w/Atari Proofreader Program and Dictionary by Atari
Includes the AtariWriter manual, cart. and quick reference sheet. I do not have the manual for the Proofreader and I will also send a copy of DOS 2 and a Typo Attack cart. PRICE $25
3) Movie Maker by Electronic Arts
This is an old school multimedia construction set. Included is the original packaging and the manual on how to use this once powerful application. PRICE $10
---Disk Games--- ALL $40
note:NO MANUALS
Sargon II by Hayden Software
--PRICE $3
Ninja by Mastertronic
--this game is also formatted for the C64 on the other side PRICE $3
Koronis Rift by Epyx & Lucasfilm
--PRICE $3
Mail Order Monsters by Electronic Arts
--this is a classic PRICE $7
Touchdown Football by Electronic Arts
--PRICE $3
One-On-One by Electronic Arts
--another classic w/ Magic Johnson and Larry Bird PRICE $5
Fight Night by Accolade
--PRICE $3
Spy Vs Spy by Avantage
--very fun for two players PRICE $5
Summer Games by Epyx
--an all-time classic PRICE $5
FlipTop Disk Case with lock and key
--5 1/4 disk holder has a grab bag of old saved games and various programs including 6 Antic Disks!
vol. 6 no 2 -Atari Animation
vol. 5 no 10 -Inside Atari
vol. 5 no 8 -"Shopper's Guide"
vol. 5 no 5 -Weather Pictures
vol. 5 no 1 -Anniversary Issue
vol. 3 no 11 -Practical Applications
and more misc. disks PRICE $25

HARDWARE: ALL $12
Atari 1010 cassette drive
--not sure if it works included is the power supply and data cable and
Conversational French program with workbook PRICE $7
Atari 1027 daisy wheel printer
--not sure if it works included is the power supply and data cable PRICE $7

What is the most common cause of dead 130XE's, I have replaced most of the
major custom chips, and even a few dodgey ram chips. All it produces is a
black screen and what looks like a brief sync signal, then nothing.
Occasionally the sound chip will give a beep. Any Ideas??

Mark - again

Nice nobody else answered your message....

What exactly do you need?
I saw a site recently (forgot the name ofcourse) that had digital versions of the Atari hardware manual and DeReAtari. You can also find Mapping the Atari (revised edition) on the net. I have no clue where. I have the address of Mapping in my Bookmark list, but this $%*# computer won't show it to me.

How do you kick up the transfer rate of the SIO connection? Is there a divisor that needs to be changed? From what I read, all Atari devices (disk.. cassette.. modem) use 19.2k?

The POKEY chip does all the serial communication. It has a 16 bit register<IIRC> that divides the system clock down to get the SIO baud rate. Bit rates on cassette are quite a bit lower then 19.2k, something like 600.

I can't recall all the details off the top of my head, but thinking about the system clock and the way the BAUD rate is calculated, I don't think we really get 19,200. I think the calculation is ~1.79 MHz/(16(N+1)) where 16 is a prescaler and N is the 16 bit value put into the POKEY register. Anyway, there is no way to get exactly 19,200 BAUD by dividing down a 1.79 MHz clock. Something like a 3% error.

It also means the maximum rate you could get a SIO up to is ~115k<111.9k>, but at that BAUD rate things would be happening too fast for the 6502 to keep up.

7298. Action manual scanned

The answer was YES, the 850 can be used with a null modem cable and two (2)
terminal programs to transfer data and NO, those PC applications will not
recognize it.

Hi, Alan. I was sorry to see the last Ol' Hackers newsletter in the mail
the other day. I'm gonna miss 'em.

I agree with you about the printers. I had a Gemini 10X, an Epson LX800,
and a Star NX-1001 on my 8-bits, and they all worked fine. All were
9-pin printers. The Gemini wasn't completely Epson-compatible, but most
word processors had a 10X driver readily available. I bought the Gemini in
1991 for $20, one LX800 in 1994 for $20(lost it to lightning in 96), the
NX-1001 in 1996 for $15, and another LX800 at a garage sale in 1998 for $5.
All but the first LX800 work perfectly even yet.

If you could find an HP Deskjet, Deskjet Plus, or Deskjet 500 with the
Epson Emulator cartridge, that would work, too - and the quality would be
much better than what you're used to. I used to prepare pages for our
newsletter with my XE, print to disk with an Epson driver, and upload
them to our editor to be printed with his DJ500. Worked great. They can
print straight ASCII text without the cartridge, but AFAIK no Deskjet
drivers were written for 8-bit programs.

I have a 400 that I can play Dig Dug with a cartridge.. but I have some problem using Assembler or Basic. It boots up to the ready prompt, and I can type, but when I get to the end of a line and hit return it freezes up.. I have to cycle power to unfreeze it. I am thinking there is possibly a ROM bad. But I am sure.. any idea how to check or test? Or what might be the bad ROM?

Sound works.. graphics work.. even Telelink II seems to talk to the modem properly..

Any ideas?

> null modem to go at least that fast?
> Larry

"APE will run at 50Kb/s +". I think you are mixing sections of the APE docs. The A8 SIO port will run at 24K baud(=bits per second = bps approximately), 2400 bytes/sec MAX. 19.2KB is the typical max(1920 bytes/sec). Note that a disk read transfers at about 400 bytes/sec, with warp up to three times that, or 1200 bytes/sec. Serial port speeds on the PC probably need to be faster, 19.2K * 2=38.4K bps.

It is possible to make a system that will transfer 100,000 Bytes/sec(52 X faster than SIO), but it needs a bi-directional parallel port on the PBI, and new software to make A8 DOS use it for "drive" access, and the on the PC.

Oh, and the idea on using an SIO cable is to access the PC(ST) like atari peripherals. Programs won't know how when using an 850 as it is a serial(rs232) device.

For what it's worth, I've been using Epson-compatible, 24-pin
Panasonics since 1992 with both my Atari 8-bit and my IBM-clone. (An
automatic printer switch connects the printer to both computers
simultaneously.) I've done only occasional printing of graphics with
the 8-bit over the years, but I never had any problems doing so with
the 24-pin printer.

(Since the message header mentions the 850, I might note that I've
never used an 850. My interface is a P:R: Connection.)

No that is the weird part. Memo pad works.. So I am thinking the screen
driver (S:) and keyboard (K:) are good. But the Editor (E:) which uses
whole lines may be screwed up. I am not sure if one is in one ROM vs
the other. I know I am getting chars so 0xE000 is ok. I think the
ROM's are 8k? I plan on tearing it open soon..

I had a similar problem. Actually it was the voltage regulator. Check
your power with a DMM and verify you are getting 5V. I am not sure why
it went bad, but was probably due to hours and hours of abuse ;)

Actually, memo pad mode uses the E: device. As for the ROMs: it's 10K,
divided into 2 4k and one 2k blocks. I seem to recall that the 2K is for
the floatign point system. There's also memory mapped IO in the top 16K of
memory (either 2K or 4K); the remaining memory is "empty", and is where
Omnimon fit itself.

Hope this is of some use,

David Paterson

In XL/XE:
$D100-$D1FF
$D500-$D7FF
A signal in cartridge slot indicates access to page $D5.
There's also a signal in parallel bus indicating access to page $D1.
Most of expansions use one of these.
If that's not enough, you can disable $8000-$9FFF and $A000-$BFFF internal
RAM via cartridge or $D800-$DFFF Math-ROM via expansion port.

Well,
how about an XF551 sector copier ?!? The big disadvantage is: these
sector copiers (I have 3 or 4 for XF551) will only work on XF551 drives
(they check for some stupidity of the drive, maybe the OS, maybe the
Highspeed mode, I do not know for sure). Ofcourse they will check and
thus recognize the format properly and since they are written for XF551
they support 90k (Single), 130k (Medium), 180k (Double) and 360k (DSDD,
sometimes called Quad). Write me an E-Mail if you are interested...

> Thanx, Matt

well,
the disk drive (the mechanic) does not. but the drive OS does. try to
get an NTSC drive working in Germany (PAL country), even with a correct
power amp. (230Volts) it will not work, because of the OS. This has to
do with timing... -Andreas

Well,
since the XF551 was the only "official" Atari drive sold in eastern
europe, you will ofcourse find many good XF sector copiers which have
also been produced there. For example I have some XF sector copiers,
written in (former) eastern germany (GDR). They will read S,M,D and Q
(DSDD) without problems on an XF drive.

Well,
Micro-Illustrator/Koala (compressed pictures) do have a header.
Micropainter pics do not (afaik). they just contain 7680 bytes graphic
data and 4 bytes color data (if avaiable, i.e. for Gr. 7, 15). Thats
all. Gr. 8 and Gr. 9 pics do of course not include color bytes...

Message-ID: <3A27CCCF.81A544F2@atari-history.com>
Source record: 40402

Hi,

For everyone who has asked me if I could post the owners/technical manual for the SWP Products ATR8000 system, the document is now available for download on the Atari History Site, please click the link provided below.

The document covers all of the operating procedures for the system as well as detailed illustrations on how to make cables, set jumpers, use various combinations of both Atari and non-Atari disk drives, using the ATR8000 with an 850 interface. How to upgrade the ATR8000 from 16K to 64K and most importantly, how to use the ATR8000 as both a stand-alone CP/M machine or use it with your Atari computer as a smart terminal.

The manual is in Adobe PDF format, its 75 pages and 4.21MB's

SWP ATR8000 Owners/Technical Manual

Ok.. I pulled chip A105 last night which is the ROM for 0xDxxx the best
I can make out. I booted the computer without it. Sure enough it
booted to the BASIC ready. When I tried to do anything with the keyoard
it froze. (Of course because I am missing a part of the ROM being
accessed) I am thinking this ROM is toasted. Does anyone know part
numbers beside the Atari numbers? And possibly a checksum? Can I
reburn a ROM or am I desperately seeking ROMS? How about all the
checksums on the ROMS? I can yank them and use an eprom programmer to
check...

I thought i'd mention I have some mp3's available on my home page at

http://suif.stanford.edu/~leroy/atari/

including the code to generate Alternate Reality: The City music, which
remains my favourite. Ultima III was definitely awesome. Cosmic Tunnels
also, though the versions on the web don't have the music (maybe there
was a cartridge and a floppy version of the game).

I don`t know exactly, whats there on A800, but in XL there is a small window at
$D600-D$7ff reserved by Atari for future expansions -> yours 8-).

$D100 to $D1FF
$D600 to $D7FF

Those locations can be accessed from a 74LS138 chip on the os rom
card. $D500 to $D5FF can be used if you don't have any bank select
carts inserted.

One of those signales is on the 3rd ram card slot as well $D7xx I
think is the one. If the xl is used, The D6xx and D1xx areas cannot be
used if you have any parallel devices pluged in.

"APE will run at 50Kb/s +". I think you are mixing sections of the APE docs.
The A8 SIO port will run at 24K baud(=bits per second = bps approximately),
2400 bytes/sec MAX. 19.2KB is the typical max(1920 bytes/sec)

Hi Rick D., all-
Now I'm confused. My Kbs (small "b") meant "bits". SIO for stock drives is
~19.2Kbs. WARP and USD were rated at (I thought) 50+ Kbs. Of course,
average throughput is *much lower*. SIO2PC software indicates something like
38Kbs which is about the same speed as a stock XF551 at high speed. European
Atari drives are listed at even faster than 50Kbs (Toms 710, for instance is
listed at 67 Kbs in the A8 FAQs). Tom Harker from ICD had an article in the
May, 1987 Analog that talks about this, although most of his references were in
bytes/sec. My question really was (stated a little differently) -- why
can't a null-modem connection run as fast as SIO disk transfers? And *I think*
that the answer is that a general-purpose telecom program used on the A8 end
has to do more checking and layers to go through.

(This may have been posted twice -- I had trouble when sending the original
post, and could not find it listed today.)

Hello there Atari dudes

Re: disk drive, double density and 1050 u/g's

On the 1050 if you are just looking for reliabilty for d/dens. I would strongly suggest ever Super Archiver/Super Archiver2, Happy w/vers 7.10 software, US doubler, IS Plate1050, or Lazer/ Hyperdrive (happy clones). I say this because those u/g are far more well known internationally then speedy/super speedy, which means that should you have any probs with the u/g you've better change of getting the problem solved tyhen you would do if you bought speedy/superspeedy

I have nothing against speedy etc.., I had one myself, It's just that not many were sold compared to the other u/gs, and also this upgrade is just another happy/usd clone (albeit a european one), further more it wont load in any software that has a USD compat. format on it or it won't load the following menu systems, howfen (d/d), spartados gamemenu (d/d), rob c and ian k (d/d) Alpha menu, Elton aka 1050 usd menu, John williams (d/d) aka multiboot and compat's...

Sorry for being neggy.., I'd rather be honest about the u/g's then see people waste their money

Happy Atari christmas

> after 15 years of storage?

I have an old Commodore 64 that did that. It worked when I packed it away 14 years ago but the other day when I tested it, it won't work. It will power up but instead of the normal blue screen, I get a black screen. It wasn't no good anyway, the sound chip and the microprocessor were on their way out and half the games wouldn't work.

My other C-64 I bought in 1989 still works and an old grey case C-64 still works.

I asked a guy I work with who knows about electronics and asked him what would make an electronic device just go bad despite being stored in a dry location. He said that after so many years the capacitors can leak. So it may be as simple as replacing a few capacitors.

Nope, wasn't a clone at all. The code, which you can download, was written from the ground up. The hardware might have been similar. There really aren't too many ways you can connect an 8kx8 ram and 8kx8 eprom up to a 6502.

There was some company in Canada that made a clone of the duplicator, instead of using a 6264 ram chip they used 4 6116's instead. And they changed a couple of bytes in the init code so that the drive came up configured differently.

Happy Computing also offered a rom that would plug into the duplicator that would convert it to a happy drive.

myutil.arc, probably at the umich archive, will read and write
MyDOS disks, double density only, and be sure to format the
disk on the PC. Single density just isn't gonna work, unless you
have a special floppy controller.
And you probably won't have much luck reading A8 disks that
were formatted on a A8 drive.
Then there's Deanna and oh, Anadisk.
You'd be a lot better off making yourself a APE/SIO2PC cable.

(What DOS to use with emulator?)
Uhm.. If I follow you, you want to know which DOS to use with
emulator (Atari800(Win or DOS or XLit I guess), to load
galaxian.exe.
I don't know if galaxian.exe is a file that needs a 'menu' disk, a boot
disk that will load programs that won't load with DOS because the
program loads over DOS areas.
AFAIK, SpartaDOS doesn't work with any emulator, except SpDOS
x33a.dos. The other SpDOSes (3.2d, and the FTe one) won't work
with emulators. I think the FTe one is 3.2g.

IMPORTANT NEWS!!!!!!!!!!!!!!
When one is dealing with the U.S. Military, for using a facility for any type of event, the fact that a priority function. i.e. a drill, may come and take the time of your own event.

That is true here too. My unit, B Co. 112th Engineers, did originally plan to have it's AT(Annual Training) from the 2nd of June 2001 till the 16th of June 2001. That is no longer. The AT was pushed back to the 19th of May till the 2nd of June, 2001.

As a result, with the original AT dates, no June drill was needed. But now, one is, and that drill falls on the 23 - 24th of June. As such, we have had to re-schedule the CCAG 2001 from the 29th till the 30th of June 2001, one week later.

We apologize for this change of events, as I only heard of it on Wednesday myself, and the Command to change the drill date was only a few days before that. So, this is not at all something I knew about for several months. But, only found out about it when I got my unit's newsletter.

If any of our attendees cannot attend now, because of the date change, please contact us immediately, and we will change the list. Otherwise, may all of you have a wonderful and safe Christmas Season, and we'll see you at the CCAG!

Regards,

CCAG Staff

ATTENTION RETROGAMERS, COMPUTER COLLECTORS, VIDEO GAME FANATICS!!!!

WE'RE BACK''..

CCAG 2001
(Classic Computer and Gaming 2001)

If you like collecting old computers, video games, and enjoy using them still, then come join us on:

June 30th, 2001
9AM till 6PM

National Guard Armory
IT'S ON ROUTE 57!!!

(actual address)
3520 Grove Avenue
Lorain, Ohio 44055-2048

(On Route 57, going North of I-90/Route 2)

IT&#65533;S FREE!

Both vendors and attendees!
Computer User Groups and vendors inside, flea market outside!

5,000 square feet of indoor space and an additional 5,000 square feet of outdoor space is available along with ample parking.

Setup: 29th, June, 2001
6PM-10PM

Please Call Ahead for Reservations:

Jim W. Krych jwkrych@n2net.net
440-979-9295
Fred M. Horvat fmh@netzero.net
440-286-2566
And these other CCAG 2001 organizers:
Thomas J. McLaren sirthomas@uk2.net

Please visit this site:
http://tomheroes.com/ccag.htm

As of 12/02/2000
User Groups:
Erie PA Atari Group
TI Chips
Cleveland Classic Atari Group

Vendors:
Tomorrow's Heroes
Retropolis
Songbird Productions
Video Game Connection
Ramcharged Computers

People/Organizations:
Fred Wagaman
Alan Hewston
Thomas Mclaren
Andy Frueh
Tim Snider
Curt Vendel(Atari Historical Society)
Possible Attendees!!!
Atari7800.com

We are looking to do a "Classic Game Experience" this year!
One room is going to be set up for playing classic computer and video game cartoons and commercials. The other room is going to be an emulator room-MAME, etc. We are hoping for some people with arcade systems to bring them.

See ya at the CCAG!

7356. RE: read & write atari disk with PC

Newsgroup: comp.sys.atari.8bit

In a nutshell, you cant!
It was probably this question alone that started this forum. Your best bet is to use an SIO2PC cable and software like prosystem or APE98 to network your PC's harddrive to the 8bit and do transfers that way.

> density or double density (1050 atari disk drive) ?

Anadisk claims to do single.. I have no success. See instructions at the bottom
of this page:
http://ch.its.tudelft.nl/~sidney/atari/

AtariLink from Hiassoft works for me; it is sometimes called AtariUtil or
AtariDisk, but not MyUtil which is different and less effective for me and
sometimes also called AtariDisk (very confusing). They both use true double
(180K) density and not the medium (130K) 1050 capacity.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

>I've been downloading some files with .atr.gz extensions. I tried Gzip -d &
also Winzip on the files but both say it is in an invalid<

Are you sure that they have not already been un-Gzipped and you now have the
ATR image files? ATR fiiles are approximately 90K, 130K, or 180K. If not,
then they likely are corrupted.

FWIW, I like Aladdin Systems Expander 5.1 (and Stuffit). The AE is nice for
Atari users because it will directly de-Arc Atari programs. You drag the files
to be decompressed to the workspace, and AE does the rest. It is amazingly
easy!
It is widely available, but I got mine off Shareware.com (Utilities,
Compression, 2nd group of 25).

7367. Advanced Music System (AMS) & Emulators

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-03 00:00:00 UTC
From: Jim & Sue Klein <jklein@paxway.com>
Message-ID: <3a2a8f72$1@news2.starnetinc.com>
Source record: 40436

I'm trying to get Advanced Music System (AMS) going from a Windows emulator like Atari800Win or Xformer2000.

I have an ATR file of AMS but is says *.gz after it even though it's 90k & refuses to be uncompressed by WinZip or gzip.

I've collected many AMS files over the years & wrote some also but am not looking for a AMS player per-se but AMS itself & working under an emulator.

Can anyone email me their ATR or XFD file if they have one working under emulation or also reply with a WEB site?

Or, is AMS just something that doesn't work under emulation?

Thanks for the answers, I'd really appreciate it.

Try a search at Simtel.net for Untgz386.exe. It's a MS-DOS program
that handles both .gz and .tgz.

Message-ID: <20001203184132.22791.00003073@ng-fq1.aol.com>
Source record: 40438

I have my 800 in pieces all over the kitchen; I have the motherboard out attempting to follow some instructions that will result in the installation of a cold reset switch. I noticed at the rear of the board, just under the socket for the CPU personality board, there is an edge card connector pointing out of the back.

Does this connector have any purpose? Was it for diagnostics during assembly or repair? Could it be used for memory addition or parallel devices? Obvoiusly the latter would require creation of an altered OS.

Hi,

I have the following "Electronic Games" magazines from 1982, 1983 and 1984 for sale.. All issues are in good, clean, displayable and collectable condition; any differences are noted:

** All issues are $10.00 each + USPS shipping and insurance..

** All 22 issues together for $200.00 + USPS shipping and insurance..

1.) June, 1982

2.) July, 1982

3.) August, 1982 (cover has 2, slight, vertically etched lines running across the middle.. cover separating from staples slightly, still affixed)

4.) September, 1982 (has price sticker on lower-left corner of cover)

5.) October, 1982

6.) November, 1982 (has surface tearing on left portion of cover, near spine, where address label was removed)

7.) December, 1982 (cover separating from staples, still affixed, has address label attached)

8.) January, 1983 (cover separating from staples slightly, still affixed, has address label attached)

9.) February, 1983 (has address label at bottom of front cover)

10.) March, 1983 (has address label at bottom of front cover)

11.) April, 1983 (has address label at bottom of front cover)

12.) May, 1983 (has address label at bottom of front cover.. very slight moisture wrinkling to bottom-half of cover and first 5 pages)

13.) June, 1983

14.) July, 1983 (has address label at bottom of front cover.. has price sticker on lower-left corner of cover)

15.) August, 1983 (has address label at bottom of front cover)

16.) September, 1983 (has surface tearing at lower-left bottom of cover where address label was removed)

17.) October, 1983 (has address label at bottom of front cover)

18.) December, 1983 (has address label at bottom of front cover)

19.) January, 1984 (has address label at bottom of front cover)

20.) March, 1984 (has address label at bottom of front cover)

21.) May, 1984 (has address label at bottom of front cover)

22.) September, 1984 (has address label at bottom of front cover)

** USPS "Priority" shipping and insurance for the 1st magazine is $4.05 and $.50 per magazine thereafter..

** USPS "Priority" shipping and insurance for all 22 magazines is $14.00..

** personal checks and money orders accepted.. personal checks are held for 7 - 10 business days before items ordered are shipped.. money orders accepted with immediate shipment upon receipt.. money orders are available at your local US Post Office for $.80.. **

** Note: I can also arrange to use PayPal-type services as well..

** Please make payment to Chris Stafford and mail to this address:

Chris Stafford
P.O. Box 15023
San Luis Obispo, California
93406-5023

** for reference, my eBay username is: SNEEKYTIKI..

** If you have any questions, please let me know..

Thanks Much,

Chris.. =)

Howdy folks

I once found texts in the C64 scene that ended with .gz but were not .gz-ed.
They where textfiles which could be read in every textviewer/wordprocessor (on
the Atari 8 bit). Maybe they didn't .gz 'your' files either.

Welcome to the comp.sys.atari.8bit newsgroup!

Atari 8-Bit Computers

Vendors and Developers List

"A comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users"

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current
mailto:mcurrent@carleton.edu

Please refer to the latest version of this FAQ list whenever possible!

Available via these locations and Usenet FAQ archives everywhere:

http://www.faqs.org/faqs/atari-8-bit/vendev/

ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/vendev

news:comp.sys.atari.8bit news:comp.answers news:news.answers

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, are NOT listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.
```

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection. Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.
"Hi!" to Alex Martin, who has done the same for the land of Poland.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Error 143 - Checksum error

This is the original discription by ATARI. Do you meen, that you load a file
from the DUP Menu (L - Load H1:*.COM)? Better load a file directly from the
load menu in the emulators menu bar.

Well,
try "Micro-Sparta DOS Init" (MSINI.COM) from Jiri Bernasek/Bewesoft
(author of famous Bewe-DOs which is Sparta DOS compatible and adds many
fine tools!). This tool supports sub-dirs, speeders (on or off), all
disk densities (up to 1440kbytes) and even harddisk partitions up to
16MB. All you have to do is copy the program to a game disk and use the
makeBoot program (BOOT.COM) to make it boot automatically. In other
Words: MSINI is a sort of Gamedos especially written for Sparta DOS
format... -Andreas

P.S.: Bewe-DOS 1.3 and all its tools are Freeware !!!

Well,
you cannot read Single density Atari disks with any PC program (since
Single density is FM; no PC program I know supports it). but you can
read double density (true double, 180k) with many Pc programs, like
MULE, Util, MyUtil, Deana, Spartaread, and many more programs. My
favourite tool for this job is: Ataridsk from HiasSoft (Austria), since
it has nice pull-down menus (windows?!) instead of terrible (long) DOS
commands... -Andreas

Well,
how about the Umich Atari homepage ?? Or many polish homepages (Taquart, Tight, Atari Area, etc.) Most of these have subdirs. so take a look at "Music" or "Sound" and then you should find AMS without problems. Sorry, I do not have the URL`s at the moment... -Andreas

> Mo
>

Not true !! I have been able to read and write Atari DD (180k) disk on the PC without problems. You simply need a 5,25" PC drive and a program like Ataridsk or many others. Sometimes there occur some problems because my PC drive is a HD and not a DD one. But that does not happen very often... -Andreas

P.S.: You know, 5,25" drives spin with 300RpM, 5,25"HD drives spin with 360RpM. I guess the problems refer to these, maybe sometimes the HD drive "forgets" to switch down to DD and use 300RpM...

> Coon Rapids Mn.

Well,
just E-Mail me and I send you an ATR image with some AMS players. By the way, there once also was an AMS stereo player for those Atarians that have upgraded with a second Pokey/Gumby. Unfortunately I lost this program. Maybe someone knows where to find it again ??? (It was a compiled Basic program with approx. 50 Single sectors in length)
-Andreas

P.S.: In addition, all AMS tunes can be converted to AMP tunes (means: Antic Music Processor here) and played back with Steven Lashowers AMPplayer (AMP Jukebox). AMP sounds support Karaoke text and a wider sound range (if you use the AMP editor to enhance the converted AMS sounds).

Well,
unfortunately only Pitstop (part 1) was released on disk and cart. PS II
is disk only (it would have needed a 32k or 64k super-cart, but Atari
did not make this title to an XEGS super cart). -Andreas

Same answer but,

ANADISK does support single density, the problem is not all PC floppy cards
will do single densisty. All PC floppy controllers chips<that I know of>
will do FM, but the card manufacturers left out the ability to do FM on some
of them to save a few pennies.

To the end user, a failure of the floppy controller is indistinguishable
from a failure of software.

I use atari800 for X-Windows and NOT atari800win. This means: there is no
menubar or something.

Is there any detailed information? Which checksum is meant?

The tip off should be the file size i.e. normally 90k, 130k and 180k which
might show up as 1k more allowing for the SIO2PC file header. If they're
really compressed, file sizes should vary widely.

The files format is an extension of the existing SAP format, to support
R-type SAP files. More documentation is on the web page. I provide a
player for those, though only under Linux.

They are still around, just not in obvious places. A reasonable solution is to just go to places like Salvation Army or Goodwill stores and pick up some used and/or new ones there that were donated.

Other then that, just about everyone is using a SIO2PC nowadays.

http://www.redshift.com/~cdyson/atari.html

The simple one chip versions are probably the best bet. No toggle switches or anything necessary. You can get all the parts at Radio Shack if you use the 1489 version.

My guess: Netscape had some difficulties with custom file formats. To trick it into downloading files properly, some folks would add an extender of a compressed type so the program would merrily download it. Try renaming *.atr.gz to *.atr; it should work.

Hope this helps,

David P.

> My guess: Netscape had some difficulties with custom file formats.

Netscape does not have any problem. If the web server is misconfigured -
it means it doesn't handle such file format, it will send text/plain
mime type. If Netscape gets text/plain, it will try to save it as MSDOS
text, thus changing LF to CRLF and breaks the binary file. The problem
is definitely on the 'web' side.

I own both an Atari 800XL and an Atari 400.

My 800XL works like a dream even with a crashed
1050 Disk Drive, but I never much cared for the
"keyboard" on the 400 yet it still works too.

My tech friend still refuses to repair my 1050, even
with both the schemematics and a list of compatable
"replacement" components.

My favorite Atari 8-bit games are still the following:

* Deluxe Invaders (Roklan)
* Pac-Man (Atari or Datasoft)
* Asteroids (Atari)
* AstroChase (First Star)
* Spy Vs Spy (First Star)
* Darts (Thorne/EMI)

Unfortunately I cannot play either of my First Star
games because they are both on 5 1/4" diskettes.

Wally

7397. UNIX/Linux emulator

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-05 00:00:00 UTC
From: martin.mielke@people-com.com
Message-ID: <90iaek$kt5$1@nnrp1.deja.com>
Source record: 40373

Dear all,

I'm back after a long time... :-) Nowadays I'm more UNIX-oriented due to professional reasons, therefore I would like to know if there's any (good) XL-emulator for Linux out there.

Please, email and/or CC me your replies, as I cannot check the newsgroups that often.

Thanks in advance!

Best regards,

-Pimpf-

As I wrote under "ERROR 143" in this newsgroup, you can't load a
EXE/COM-File from H1: - H4:, because, in exactly that moment, the executable
code will be executed, the RAM-Patch (with the H1:-Handler) is disabled.

7402. recover atari floppies under linux

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-05 00:00:00 UTC
From: Andrew Bernard <andrewb+@---NOSPAM---cs.cmu.edu>
Message-ID: <uu1y9xv9d0q.fsf@onastick.fox.cs.cmu.edu>
Source record: 40378

Hi all,

I've had some success with the enclosed scripts
for reading Atari-formatted floppies under Linux,
so I thought I'd share them with the world in
case anyone else finds them useful. Please feel
free to post them on websites, etc.

These are based on ideas from
http://www.cs.dartmouth.edu/~crow/atari/

I haven't been able to get the "enhanced" density
script to work, but I've about recovered about 5 boxes
worth of disks using the single density and double density
scripts. Please let me know if you figure out what's
wrong with the ED script or if you find any other bugs.
Note that I've heard that many floppy controllers won't
handle single density, but I happen to have one that
does, so it might be worth a try if you don't know for
sure.

The scripts send commands directly to the floppy
controller using fdutils 5.4 and write out an ATR
file based on the results. Each sector is read
individually so that you can recover partial files
even if the file system is corrupted by bad sectors.
This is useful if, like me, you have a lot of bad
sectors.

The script also prints out a log that shows where
the floppy drive ran into trouble so you can go back
and retry problem areas. I haven't written a script
to do this yet. Look for "remaining= 128" or
"remaining= 256" for failed reads. I usually do
something like

make-atr-sd >disk1.atr 2>disk1.log

Note that each log is almost as long as a disk(!)

Change the assignment to "drive" at the start of the
script if your 5 1/4 inch drive isn't fd1.

You need fdutils 5.4 in your path for this to work.
You also need to compile "flip.c" and "atr-header.c"
and put them in your path. Don't forget to set the
executable bit on the shell scripts.

Consider these programs in the public domain.
I'd appreciate any feedback/enhancements/etc.

Many thanks to Alain Knaff for making this possible.

Cheers,

-andrew

If I follow you, you want to know if you get an A8 DOS, and
copy the file to a pc disk, will the A8 read it.
No.
If you have a double density A8 drive (1050 with doubler or other
double density drive) then I think you can format a 5.25 disk on
the pc with myutil, but not write DOS files.
A DOS disk is sorta hard to come by, if all you have is the PC
to download with and the Atari 8-bit you want DOS for.
Using APE or SIO2PC software and a APE/SIO2PC cable it
is easy. You'd just boot the DOS image you want using APE,
Then write DOS files to your real A8 drive, setting the A8 drive to D2:
Otherwise, Ben Smith or Video 61 or B&C ($20 min order). or somebody
would have to provide you with a DOS disk.

To respond to this message, please use the enclosed email address rather than your reply button. Dealer enquiries are welcome.

- Last Updated 12/04/00
- Sold items removed

I have a limited amount of brand new Atari Jaguars and Jaguar items for sale or trade. These packages are ideal for new collector's or somebody wanting to start or add to their Atari collection. If you have any questions, please feel free to ask. I am also willing to trade for certain items, please see my list at the end of this post. All prices quoted are in U.S. funds with the buyer paying shipping.

If you are interested in any of these items, please respond to me by using this automated link jim_l@NO.SPAM.telusplanet.net?subject=Classics.Atari.Jaguar (removing the NO.SPAM. first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

** Atari Jaguar Packages - Brand New (with controller, RF Box & AC adapter)**
==========
-.Atari Jaguar with CyberMorph cartridge and Composite Video Cable $45
- Atari Jaguar with CyberMorph cartridge $35
- Atari Jaguar (No Cart) $25

** Atari Jaguar Accessories - New**
==========
- Team Tap (4 Player adapter) $20 - 2 units left
- Jaguar unit alone (No power supply, controller or accessories) $20
- Composite Video Cable $15
- Spare Controller $15
- AC Power Supply $10
- RF Switch Box $5

** Atari Jaguar Games - New/Shrink-wrapped**
==========
- Checkered Flag $10
- CyberMorph $5 (No Box)

Atari Force Comics Please make an offer
==========

All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- An original Intellivision keyboard for the original Intellivision
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

$10 each?

I just threw away two boxes full of them. If I find any more in my
mass cleaning spree (I believe I have more from '83 and '84), I'll
give them away to anyone who wants them.

All you'll have to pay for is shipping. Just post a msg here if
you're interested.

Kitschies need not apply (unless I get a cut).

Message-ID: <90i0hh$2nqi$1@wrath.news.nacamar.de>
Source record: 40371

In Windows, I have the same problem. While loading a COM-File from H1:, I get the messedge ERROR 140 (means error on serial bus). In that case, I'll think, it's an error in the Atari800. To make possible an XS to H1:, a ROM-Patch is needed. When you load a text-file, the H1:-Controler can run without errors, but when you try to run a H1:-program, the H1:-controller-ROM-Patch seems to be disabled (to be most compatible with the most ATARI-programs). When this program trys to continue the loading process (now without an H1:-Comtroller), you get an error messedge. That is my sight of this case.

Please,

I am new on this newgroups. I have the Atari XL130 and the 1050 drive.
Is there any solution to use another media to load, write and boot
running Atari applications?
I mean, If I can't get the 5" floppies anymore, What can I do in order
to use my Atari?

Thanks for your advices

7418. Turbo-BASIC and Assembler

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-06 00:00:00 UTC
From: Mirko Sobe <atarixle@12move.de>
Message-ID: <90lkap$g79$1@wrath.news.nacamar.de>
Source record: 40388

Can anyone translate theese lines into assembler?

```
500 PROC TEXT:IF T$="" THEN 599
510 IF FL$="" THEN TEXT X,Y,T$:X=X+LEN(T$)*8:GOTO 599
520 FOR P=%1 TO LEN(T$)
530 TEXT X,Y,T$(P,P):E=(ASC(T$(P))+%1)$7F:X=X+VAL(FL$(E,E))
540 NEXT P
599 ENDPROC
```

It's used for printing text on a GR.8 Screen in proportional-font.

FL$ contains the width of every character as a decimal-number
(FL$="887666887", 128 chars long)
if FL$ is empty, T$ should be TEXTed with the normal TEXT-command
and with fixed-width-characters
T$ contains the text what's be written on the screen
X contains the X-location
Y contains the Y-location of the text
P, E are internal variables

Sounds like maybe the rectifier bridge on the power supply board; measure the resistance across all four (4) in both directions - any reading the same each way probably bad. When one blew on my 1050, it took the fuse in the power brick with it and then two (2) more before I had it diagnosed.

: 520 FOR P=%1 TO LEN(T$)
: 530 TEXT X,Y,T$(P,P):E=(ASC(T$(P))+%1)$7F:X=X+VAL(FL$(E,E))
: 540 NEXT P
: 599 ENDPROC

: It's used for printing text on a GR.8 Screen in proportional-font.
<snip>

One of the interesting things with this is that there could still be
some extra white space in some characters, since it doesn't appear
to shift characters to the left any.

I would add a second array (FL2$, maybe? :) ), which contains offsets
on how far LEFT the character should be placed. So:

520 FOR P=%1 TO LEN(T$)
530 E=(ASC(T$(P))+%1): REM WHICH CHAR WE LOOKING AT?
535 TEXT X-VAL(FL2$(E,E)),Y,T$(P,P): REM DRAW IT, SHIFTED LEFT SOME
537 X=X+VAL(FL$(E,E))-VAL(FL2$(E,E)): REM MOVE VIRTUAL CURSOR
540 NEXT P

Here's some nice ASCII art to show the differences:

--------------------------------
-######-----##-----###-----####---
-##--##-----------##------##--- Original, non-proportional
-######----###-----##------##---
-##--##----##------##------##---
-##--##----##------##------##---
-######----####----####----#####--
--------------------------------

------------------------------
-######-----##----###----###---
-##--##----------##-----##--- With pixels on right removed
-######----###-----##-----##--- (ie, the original code)
-##--##----##-----##-----##---
-##--##----##-----##-----##---
-######----####---####---#####--
------------------------------
```

```
---------------------------
-######----##---###---###---
-##--##---------##----##--- With pixels on right AND left removed
-######---###----##----##--- (ie, my version)
-##--##---##----##----##---
-##--##---##----##----##---
-######---#####--#####--#####--
---------------------------
```

Maybe a better example would be a very thin character, like "!":

```
----------------
---##------##---
---##------##--- Original
---##------##---
---##------##---
----------------
---##------##---
----------------

------------
---##----##-
---##----##- Right pixels removed (original code)
---##----##-
---##----##-
------------
---##----##-
------------

--------
-##--##-
-##--##- Both sides removed (my code)
-##--##-
-##--##-
--------
-##--##-
--------
```

Not that this gets you what you WANTed (ie, a version in ASM), but
still, I hope this is helpful! :)

>R Stag stagger3@yahoo.com asks:

>Is there a way I can get a hold off a version of Atari DOS. Also,
>If I copy the dos file(s) to a 5.25 disk from my pc, will the atari
>1050 be able to read it??

this Archive site has the most common except Sparta:
http://www.atari.nu/wysk/dos.htm
I recommend 2.0, 2.5 or MyDOS 4.5 to start.

there are several esoteric DOS's here:
http://www7.ewebcity.com/atari/a8men.htm
in the file/download section

XL search has gobs of stuff also:
http://www.newbreedsoftware.com/xlsearch/

Now, the bad news is that most PC floppy controllers cannot read/write the A8
single density floppy format. Anadisk has been known to accomplish it on some
PC's; the instructions and links to the software are at the bottom of this
page:
http://ch.its.tudelft.nl/~sidney/atari/
The 1050 can format a disk without DOS by using the resident disk handler and
then it's up to your PC floppy controller.

IF your 1050 has been doubled, then AtariLnk or AtariDsk by HiasSoft can
transfer data in double density.

There are good game versions of Dune. I remember playing the Amiga
version for hours. Perhaps a version for Atari 8bit could be thrown
together.

I've seen segments of Dune the new TV version. I was surprised to see
actor William Hurt as Duke Leto Atreides. The production and effects
seemed great esp. for a TV show.

I liked the 1985 movie too and don't understand why it gets such a bad
rap.

Hi Mirko,
I have asked you some days ago if you need ASM-Routines.
Now I have installed cc65 on the LINUX-box here at univerity so I can
do it. But I need more info. Like: must the routine be relocatible and so
on.

salut,
daniel

7430. looking for Mastertronic covers...

Hi !
I'm looking for pictures of the following cassette covers:
- Speed King (by Mastertronic)
- Dropzone (the one by Mastertronic)
- Kenny Dalglish Soccer Manager (the one by Zeppelin Games)
- Star Wars (by Zeppelin Games)
Do you know if Star Wars was ever released officially ? (maybe by Domark
?)

Bye,
- Mr.Bacardi -

P.S.: Have also a look at my web-page:

Hi,
Thanks for your answer.
About SIO2PC cable it sound very interesting. May you explain me How may I use it to boot my Atari running an application?
I mean, what kind of media I will need to store my games an applications?

Thanks

Jach

> I mean, what kind of media I will

Easiest way to think about it as software + hack that converts your IBM style PC into an Atari drive. Instead of plugging a 1050 into the SIO cable, you plug the cable into a PC. The Atari doesn't know the difference, it thinks the PC is a drive.

The capacity of the emulated drives is only limited by the storage on the PC. Booting and using the storage is just like a physical Atari drive, boot to DOS, boot games, use it as a large storage area for program development.

I update my catalogs once a week. Just before this message is posted.
So when you see a new posting, check my Catalogs. After I post this
message. I'm off for the weekend. But I'll be back after the weekend.

e-mail: atari@benjamin.net

To make room for new stock, Bravo Sierra Computers is holding a YearEnd
Holiday Sale. Everything is 10%-30% off! Atari Orders for $50 and up
are 10% off, Orders $100 and up are 20% off and orders $150 and up are
30% off provided the customer claims the discount in E-Mail. This Sale
covers Atari Jaguar, 8-Bit & ST. This Sale does not cover Monitors.
Customer pays Shipping. So order now while supplies last. Get your free
Atari catalogs at: www.atari.benjamin.net or E-Mail atari@benjamin.net

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari
64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories!
View Atari Catalogs on the Web at http://www.atari.benjamin.net & Jump
to my FTP site linked to my WebSite so you can Download Free Catalogs
or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's not an inconvenience. I do ask that you specify
Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you
by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can
attach text files to your E-Mail. Catalogs are just regular ASCII text
files so you can download them into your text editor & view them, edit
them or print them out! It would make things easier for me if you take
my Catalogs, load them into your text editor, delete what you don't
want and E-Mail me the rest! To expedite things, include your complete
Mailing address so I can figure your Shipping/Postage & Handling. I'll
be back after the weekend.

Hello, my name is Benjamin Smith. I'm a Collector & Jaguar Game Player.
With all my games to play, I have no one to play Games with on my Atari
Jaguar. I live in Portland, Oregon. USA and I'm looking for Atarians to
play Jaguar Games with. You don't necessarily have to have a Jaguar.
Most any Atari will do. I'm thinking of starting Atari meetings in
Portland. Focused on Gaming but still supporting any Ataris. Call Ben
anytime at (503)256-9974 or E-Mail:

e-mail: atari@benjamin.net

If I'm unable to answer, leave a message and I'll call you back.

TURN SIX DOLLARS INTO SIX THOUSAND QUICK AND EASY Guarenteed

READING THIS MESSAGE WILL CHANGE UR LIFE FOREVER

: I found this on a bulletin board and decided to try it. A little
: while back, I was browsing through newsgroups, just like you are now,
: and came across an article similar to this that said you could make
: thousands of dollars within weeks with only an initial investment of
: $6.00! So I thought, "Yeah right, this must be a scam", but
: like most of us, I was curious, so I kept reading. Anyway, it said
: that you send $1.00 to each of the 6 names and address stated in the
: article. You then place your own name and address in the bottom of
: the list at #6, and post the article in at least 200 newsgroups.
: (There are thousands) No catch, that was it. So after thinking it
: over, and talking to a few people first, I thought about trying it. I
: figured: "what have I got to lose except 6 stamps and $6.00,
: right?" Then I invested the measly $6.00. Well GUESS WHAT!?...
: within 7 days, I started getting money in the mail! I was shocked! I
: figured it would end soon, but the money just kept coming in. In my
: first week, I made about $25.00. By the end of the second week I had
: made a total of over $1,000.00! In the third week I had over
: $10,000.00 and it's still growing. This is now my fourth week and I
: have made a total of just over $42,000.00 and it's still coming in
: rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more
: than that on the lottery!! Let me tell you how this works and most
: importantly, WHY it works... Also, make sure you print a copy of this
: article NOW, so you can get the information off of it as you need it.
: I promise you that if you follow the directions exactly, that you
: will start making more money than you thought possible by doing
: something so easy!

: Suggestion: Read this entire message carefully! (print it out or
: download it.) Follow the simple directions and watch the money come
: in!

: It's easy. It's legal. And, your investment is only $6.00 (Plus
: postage)

: IMPORTANT: This is not a rip-off; it is not indecent; it is not
: illegal; and it is 99% no risk - it really works!

: If all of the following instructions are adhered to, you will receive
: extraordinary dividends.

: PLEASE NOTE:
: Please follow these directions EXACTLY, and $50,000 or more can be
: yours in 20 to 60 days. This program remains successful because of
: the honesty and integrity of the participants. Please continue its
: success by carefully adhering to the instructions.

: You will now become part of the Mail Order business. In this business
: your product is not solid and tangible, it's a service. You are in
: the business of developing Mailing Lists. Many large corporations are
: happy to pay big bucks for quality lists. However, the money made
: from the mailing lists is secondary to the income which is made from
: people like you and me asking to be included in that list.

: Here are the 4 easy steps to success:

: STEP 1: Get 6 separate pieces of paper and write the following on
: each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now
: get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of
: paper so the bill will not be seen through the envelope (to prevent
: thievery). Next, place one paper in each of the 6 envelopes and seal
: them. You should now have 6 sealed envelopes, each with a piece of
: paper stating the above phrase, your name and address, and a $1.00
: bill. What you are doing is creating a service. THIS IS ABSOLUTELY
: LEGAL! You are requesting a legitimate service and you are paying for
: it! Like most of us I was a little skeptical and a little worried
: about the legal aspects of it all. So I checked it out with the U.S.
: Post Office (1-800-725-2161) and they confirmed that it is indeed
: legal. Mail the 6 envelopes to the following addresses:

: #1)Jeff Brookman
: 3415 Covered Bridge Ln.
: Charlotte, NC 28210

: #2)Wit Wichaidit
: 10912 Broad Green Terrace
: Potomac, MD 20854

: #3)Mike Schude
: 893 S. roanoke
: Gilbert, AZ 85296

: #4)David Freeman
: 11045 Harbour Springs Circle
: Boca Raton, Fl 33428

: #5)Kevin Kniceley
: 4029 Minard Rd. N.W.
: Dover, OH 44622

: #6)John Decowski
: 51 Walnut Hill Rd
: Derry, NH 03038

: STEP 2: Now take the #1 name off the list that you see above, move
: the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR
: Name as number 6 on the list.

: STEP 3: Change anything you need to, but try to keep this article as
: close to original as possible. Now, post your amended article to at
: least 200 newsgroups. (I think there are close to 24,000 groups) All
: you need is 200, but remember, the more you post, the more money you
: make! You won't get very much unless you post like crazy. :)

: This is perfectly legal! If you have any doubts, refer to Title 18
: Sec. 1302 & 1341 of the Postal lottery laws.
: Keep a copy of these steps for yourself and, whenever you need money,
: you can use it again, and again.

: PLEASE REMEMBER that this program remains successful because of the
: honesty and integrity of the participants and by their carefully
: adhering to the directions. Look at it this way. If you are of
: integrity, the program will continue and the money that so many
: others have received will come your way.

: NOTE: You may want to retain every name and address sent to you,
: either on a computer or hard copy and keep the notes people send you.
: This VERIFIES that you are truly providing a service. (Also, it might
: be a good idea to wrap the $1 bill in dark paper to reduce the risk
: of mail theft.)

: So, as each post is downloaded and the directions carefully followed,
: six members will be reimbursed for their participation as a List
: Developer with one dollar each. Your name will move up the list
: geometrically so that when your name reaches the #1 position you will
: be receiving thousands of dollars in CASH!!! What an opportunity for
: only $6.00 ($1.00 for each of the first six people listed above) Send
: it now, add your own name to the list and you're in business!

: ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS------------

: Step 1) You do not need to re-type this entire letter to do your own
: posting. Simply put your cursor at the beginning of this letter and
: drag your cursor to the bottom of this document, and select 'copy'
: from the edit menu. This will copy the entire letter into the
: computer's memory.
: Step 2) Open a blank 'notepad' file and place your cursor at the top
: of the blank page. From the 'edit' menu select 'paste'. This will
: paste a copy of the letter into notepad so that you can add your name
: to the list. Step 3) Save your new notepad file as a .txt file. If
: you want to do your postings in different settings, you'll always
: have this file to go back to.
: Step 4) Use Netscape or Internet explorer and try searching for
: various newsgroups (on-line forums, message boards, chat sites,

: discussions.)
: Step 5) Visit these message boards and post this article as a new
: message by highlighting the text of this letter and selecting paste
: from the edit menu. Fill in the Subject, this will be the header that
: everyone sees as they scroll through the list of postings in a
: particular group, click the post message button. You're done with
: your first one! Congratulations...THAT'S IT! All you have to do is
: jump to different newsgroups and post away, after you get the hang of
: it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE
: MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU
: HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving
: money from around the world within days! You may eventually want to
: rent a P.O.Box due to the large amount of mail you will receive. If
: you wish to stay anonymous, you can invent a name to use, as long as
: the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE
: CORRECT.**

r. Now,
: each of the 5 persons who just sent me $1.00 make the MINIMUM 200
: postings, each with my name at #5 and only 5 persons respond to each
: of the original 5, that is another $25.00 for me, now those 25 each
: make 200 MINIMUM posts with my name at #4 and only 5 replies each, I
: will bring in an additional $125.00! Now, those 125 persons turn
: around and post the MINIMUM 200 with my name at #3 and only receive 5
: replies each, I will make an additional $625.00! OK, now here is the
: fun part, each of those 625 persons post a MINIMUM 200 letters with
: my name at #2 and they each only receive 5 replies, that just made me
: $3,125.00!!! Those 3,125 persons will all deliver this message to 200
: newsgroups with my name at #1 and if still 5 persons per 200
: newsgroups react I will receive $15,625,00! With an original
: investment of only $6.00! AMAZING! When your name is no longer on the
: list, you just take the latest posting in the newsgroups, and send
: out another $6.00 to names on the list, putting your name at number 6
: again. And start posting again. The thing to remember is: do you
: realize that thousands of people all over the world are joining the
: internet and reading these articles everyday?, JUST LIKE YOU are
: now!! So, can you afford $6.00 and see if it really works?? I think
: so... People have said, "what if the plan is played out and no
: one sends you the money? So what! What are the chances of that
: happening when there are tons of new honest users and new honest
: people who are joining the internet and newsgroups everyday and are
: willing to give it a try? Estimates are at 20,000 to 50,000 new
: users, every day, with thousands of those joining the actual
: internet. Remember, play FAIRLY and HONESTLY and this will really:
work.

7440. ANTIC & Compute Mags for trade. Anybody else collect these?

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-07 06:14:06 UTC

I still love reading these old magazines, Does anybody else?
I have a heap of ANTIC & Compute mags for trade.
Will trade for any mags* listed at the bottom of this list.

Antic May 86 Vol.5.1
Antic Jun 86 Vol.5.2
Antic Jul 86 Vol.5.3
Antic Aug 86 Vol.5.4
Antic Sep 86 Vol.5.5 x2
Antic Oct 86 Vol.5.6 x2
Antic Feb 87 Vol.5.10 x2
Antic Mar 87 Vol.5.11
Antic Apr 87 Vol.5.12 x3
Antic May 87 Vol.6.1 x3
Antic Jun 87 Vol.6.2
Antic Jul 87 Vol.6.3
Antic Aug 87 Vol.6.4
Antic Sep 87 Vol.6.5
Antic Oct 87 Vol.6.6 x2
Antic Nov 87 Vol.6.7
Atari User Jul 86 Vol.2.3
Compute Jun 85
Compute Aug 85
Compute Sep 85
Compute Jul 86
Compute Sep 86
Compute Oct 86
Compute Dec 86
Compute Jan 87

I'm willing to trade for more Mags of the following:
ANTIC
ANALOG
Atari User UK
Page 6
Electronic Gaming (Early issues to '85)
Atari Age

* Or if you dont have any mags, but still want some of the above,
then I would trade them for C or U carts, 2600, Atari 8bit, 7800.

I dont need anymore compute mags, I now have a complete collection
up till '88.

(sorry for crossposting, just trying to reach all who may be interested.)

Sorry, I forgot to say that the white pixels left are already removed in the special-font-sets, I've created. You can download them at www.atarixle.de/download/. The white pixels right will be removed by this routine. Look at my screenshots on www.atarixle.de/boss/myboss.html and you see the, what the font look like. But this Turbo-BASIC routine is not fast enough for me, that's why, I asked for assembler.

No. Let It begin at $600. I only MOVE the routine into $600, when I need
(call) it. When the routine has finnished, I restore the page6. You can
download some fonts, witch already contains the info about the width of each
character. That should be helpfull to find out more about this routine.

Just me, but there are several things that make a movie or story compelling.

For one thing, you have to care one way or another about the protagonist. You don't want to see Princess Lea die and you really hope good guy Luke Skywalker can beat that evil Darth Vader. It helps if you can identify with at least one of the characters too.

In the movie Dune, I really didn't care who won, who died, "spice", and was really hoping Sting would break into a song vs another boring diatribe that I didn't really want to hear. IOW: As written and acted, the story was completely w/o involving characters. The presence of the plot was not enough to carry the movie.

Your games & apps can be either on the PC harddisk or PC floppies, but it cannot read A8 floppies; it uses a PC file which is an image of the data on an A8 floppy. The SIO2PC software emulates an 810/1050 drive and the SIO2PC cable sends the signals to the 800/800XL/130XE which sees it as a standard drive.

> hardware rights?

Their copyrights which cover software and board design would still
be in effect, but I looked up the 8 bit computer patents and they appear to
have run out. There is a form/method of patenting called "Continuation in
Part" or CIP. It is possible that they snuck one in for things like 800XL or
130XE families, but I didn't notice it with a quick glance.

I think they do things like copyright the silicon layout for chips too.

Kind of academic/hobby. I mean you could clone an 800 if you wanted to
reverse engineer the chips and OS, but with that much effort it would
probably be just as easy to start from scratch. I really don't think a 1.79
MHz 6502 based machine would appeal to anyone from a $$$ standpoint.

7456. Re: Atari 400 HW problem...

Ok.. as a follow up and possible future info for anyone who ever has the same problems. The A105 (2k) OS system ROM is corrupted. I replaced it, and it works fine. Now I just need to make a copy or burn one for myself. This chips pinout looks non-standard, does anyone know if there is an eprom I can substitute? I can't find a decent web-page with info about the chips.

Also.. I am using an MC6821 instead of the 6520 PIA chip. It seems to be working with my limited testing. Anyone know of any major problems with doing this?

Does anyone even repair their old crap??? :))

pretty fine in their day.

Here we all talk about the 8-bits. The 400/800, XL and XE ranges. all are compatable to each other (baring minor niggles here and there). Their main rivals proberbly being the commodore 64 (excuse my swearing peeps). Realy there is not an enormous amount of difference between them, good sound, good colour and resolution for the time, avalibility of cartridges (though more were avalible for the atari here) Use of disk drives printers, modems etc. each has its own quirks and personality. And i feel more at home with the personality of the Atari rather than the Commie 64.

atari were and always will be for me the great computer games people. certainly the 800XL and C64 were far more capable machines than my Siclair Spectrum which was the big machine here, and as soon as i started my first full time job, and got my first pay packet i shot off to dixons and treated myself to an 800XL with cassette drive. From then on I found out about silica shop and got a disk drive. attended the cons and got a printer, and found a shop in epsom and one up by my grandparents that did the software. Like a silly git i sold the lot to a friend to raise money for my first PC for university (an old ibm ps/2 luggable) and have regretted it ever since. In the last year, tierd of windows i have been rebuilding my collection :)

Wether that speeks of the personalty of the atari bringing me back, or just that i'm a sad old so-and-so, well you decide. :)
But whenever its 'paitence my ****, i wanna kill something' Star Raider or Zybex on my atari seem to hit the spot instantly.

Hey...games are always good!!! Get a copy of Star Raiders and blast away!!! How about PacMan??? You could get the old 8-bit word processor and keep your journal on your Atari... Get an Action! cartridge and type in some of the games from the old Antic magazines. Type in some of the BASIC games from the old magazines like Compute! (Some magazines are available at WEB sites as graphics files...)

I am *not* familiar with the 130XE, but maybe it can use the old 800 cartidge games??? If you play chess, get a chess program for the 130XE. Then get a chess program for the PC, and let the two programs play each other.

Amaze your friends that these old machines from back in the Stone Age (circa 20 years ago) could do anything remotely interesting...

7465. Re: Different Printers for Atari

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-09 13:14:08 UTC
From: Russ Gilbert <russg@en.com>
Message-ID: <3a3266a9$0$1513$53a6afc1@news.erinet.com>
Source record: 40294

I don't know if Epson keeps there printers backward compatible.
I do know that many printers today are 'Win' printers. They require
Windows to work. These 'Win' printers don't even know the
alphabet. They work strictly by bit mapping of fonts from Windows.
They are usually cheap, because they don't have to have fonts
built in.
You should be able to find a printer that has fonts built in. I'm sure
HP PCL printers have fonts. I'm sure there are Epson printers
that have fonts, and maybe even backwards compatibility.

Since I don't have a 400 or that chip in my hand, I can't say for
certain, but Atari was very tricky when producing ROMs for their
products. I believe they did it for the express purpose of
keeping 'hackers' from releasing a better product than they did, but at
any rate, they would swap around the chip select signal for an address
pin and then make the chip enable pin 'positive enabled' instead of
negative as EPROMs are. These are custom chips available only in mass
quantities from a slew of manufacturers and are known in the industry
as 'maskable PROM's. They are configured and burned at the factory so
the little guy has no choice but to use an inverter device to invert
the chip select signal and do a little re-wiring to get the pins right
for an EPROM. Just to confuse matters more, the chips are labeled with
custom 'in house' numbers that the factory will _not_ discuss with you
or anyone else, so you can't even find out just what the pin out or
memory size is exactly. You have to guess and when you are right, it
will work. I have heard of desperate fellows cutting a window in the
top of the chip and erasing them with UV just like an EPROM, then
reprogramming them, but I won't stand by the method or claim it works
in any way. Best of luck on that project, but having said all the
above, the OS ROM of an XL/XE is pin for pin compatible with a 27128

EPROM. I guess Atari gave up on the convoluted ROM policy at least for that one (or more?)instance. Are you sure your ROM is corrupt and not suffering from dirty pin/socket disease? These are old machines and they get that bug from time to time, you know. The system boards on the 400/800 were famous for that disease as their contacts were tin plated for the early machines. A decent schematic should allow you to 'pinout' the chip and compare the results to a 2716(?) EPROM.

The MC68B21 PIA is pin for pin compatible with our 6520 PIA, the MC68A21 is however, a 1 Mhz version and should not be used, since our 8bits are clocked at 1.7 Mhz. I don't know what to tell you if you are missing the 'B' or the 'A'. 'B' = 2 Mhz version. MC = Motorola. Hitachi made the HD68B21 which we can also use. Atari used it without the Atari 'CO' numbering system on their last runs of XE boards.

I think its patently obvious that I've never even had the top off of any of _my_ Atari machines, - repair??, what's that? :)

I second the games option.
The XE range has a cart port at the back, baring the occational coding niggles with a few early games, it shold play almost all the 400/800/xl games whatever the format.

These things were ment to be used, and played with, i would like to keep it that way with mine as long as possible!

after all a great game is a great game.

An man who still plays Mule on the odd idle evening :)

Now let's see just what they will do with it. Let's hope they will support the old Atari items like the Lynx and the Jag. Certainly they deserve more support then the Tramiels gave them.

I would imagine that it still could be used for games, word processing and
spreadsheet applications. There is a gent in our Atari club that still to
this day, uses his 8-bit for accounting purposes.

Like a lot of Atarians, I have a non-Atari (shame!) printer, namely, an Epson LX-80; but I'd like to move up to an ink-jet or even a laser printer. The problem is that I want it to be downwardly compatible with the programs that I use now so that there won't need to be any radical soft/hard ware changes. In other words, just plug it in and print. I would assume that an Epson ink-jet or laser printer would allow me to do this, but I need information, and Epson (so far) isn't giving me any info. Can any of you help? You can send me e-mail directly, that would be best.

Thanks

hey.. i just setup a bbs thats aimed at the atari 8 and 16.32 bit machines.
it's currently at: bbs.ataristuff.com (just telnet into it)
It's centered around interaction (messages, chatroom, etc), but we'll have
the file xfer section up as soon as that module is written.

njoy!

NOTE: It was setup this morning, so don't expect the world.. it's young.. so
we can mold it to our liking :)

What does this statement do? Specifically the "$7F"?

I see that "E" is the value of the current letter being mapped, adjusted +1 for offset into FL$ to get its width. Is the rest a typo? Will the assembly routine run from a USR call? What means do we have to pass the length and address of the strings? It will be more complicated than in BASIC. What are the memory limitations? Any zero page locations available?

I believe it should read:

E=(ASC(T$(P))+%1)&$7F

i.e. mask out the inverse bit.

I'm *still* looking for a good home for a very large quantity of vgc old computer stuff from the dawn of UK home computing.

A lot of it is in "boxed as new" or "near mint" condition.

This is available free, including transport, to a good and appropriate home.

The one stipulation is that is must be able to go on go on semi-permanent public display almost at once, and that does not include "my bedroom's open to anyone who likes to knock at the front door...", nor is "I've already got a super collection too, but I'm still trying to find suitable premises" acceptable.

If anyone knows of a museum or other appropriate site that might be interested in taking it on and doing it justice, please contact me at museum@spheroid.demon.co.uk .

I've already tried the Science Museum and Bletchley Park, by the way.

Hello,

I'm looking for a crack of Cubase 2.06 because i have an official version
but the key is damaged.
Can anyone tell me where to find one ?

7491. Music editor docs?

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-10 20:49:36 UTC
From: Mark Keates <mark@mkeates.force9.co.uk>
Message-ID: <OSRY5.10742$I5.110773@stones>
Source record: 40310

Hi,

Does anyone have any links to download
instructions for the music tracker programs
Future Composer or Chaos Music Composer?
Its really the key usage I'm after.

Are the specs for their file formats available too?

For those who write/have written music,
which is your prefered editor and why?

Cheers,

Mark

7492. Compact Flash Card

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-10 21:14:37 UTC
From: llpwhite@cs.com
Message-ID: <20001210161437.28286.00000683@ng-fe1.news.cs.com>
Source record: 40311

A week or so ago, there was a thread here that mentioned the Compact Flash Card pinning out like an IDE interface. Which is intriguing to say the least. I was at Circuit City yesterday looking at the (still too expensive for me) digital cameras, and they had CFC's (not Freon!) out on display. I counted 50 pin sockets (at least I think there were 50 -- wow, they are small and dense.) Has anyone looked into this any further? Having a built-in static ram hard drive would be incredible!
Larry

>I believe it should read:
>E=(ASC(T$(P))+%1)&$7F
>i.e. mask out the inverse bit.

That certainly makes good sense and looks reasonable, but I have more questions:
Are we working in a GR8 screen? Is color a factor? Will the "1"'s we toggle from the bitmaps give adequate contrast? Will the normal pointers get us to screen memory and character set locations? Are the characters in ATASCII order or normal internal code order?
Answer these and the last posting and we are ready to begin coding...

7496. Turbo-DOS XL/XE

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-10 23:21:10 UTC
From: Oliver Jaksch <ojaksch@gmx.de>
Message-ID: <911398$24f$06$1@news.t-online.com>
Source record: 40315

Hi there!

Meanwhile copying my old 5 1/4 Disks to PC (thanx to lovely APE) I found an original Version of Turbo-Dos XL/XE v2.1 ((C) 1990/91 by Reitershahn) which I want to share with you. But I don't know whether it's okay 'cause of (possible) vaild copyright restrictions.

So please, gimme me an OK or a STOP.
If it's ok, I'll upload the install-disk with scanned documentation (in german language).

Background Information:
- Turbo-Dos is a DOS with utilities, compatible to and supporting the follwing disk-drives and densitys:
1050, Turbo-Modul, Speedy, Happy, XF551, Percom
- compatible to DOS 2, 2.5 XF-DOS
- supporting RAM-Disks up to 256 kb
- command line UI
- batch processing with editor
- sector- and file-copier
- converter between DOS 2/3/4
- printer driver for centronics interface
- functions for disc rescue
- sector analyzing
and some other features

So long,
Oliver

I just recently (within the last month) purchased the Manual (to
replace the one I lost) for ACTION! from B&C Computervisions. Finding a
cartridge is going to be more problamatic more than likely.

I used to do all my programming in ACTION!. It was a fun language
to use.

>

Thanks for the post.. I think the version I have is a 1Mhz chip.. but it
appears to be working.. So woooo hooo! :) PIA's aren't to hard to come
by... so if I have problems I will upgrade it.

And yes I am sure it is the ROM.. I pulled it out and swapped with a
guy. It works with the new ROM.. mine does not even after the swap. I
have tried to trace those ROM's before to no-avail. I understand their
reasoning. It just makes it bad when I want to fix the thing.
Hopefully I will find someone with some spares and talk them out of
them.

I have the SAMS photo facts on this computer if anyone needs it to help
repairs.

I have an 800XL.. but my 400 was my oldest and favorite computer. I
even upgraded the memory way back in '82 :) so I have had it apart
plenty. I am suprised it works as well as it still does.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

Howdy folks

I've tried to download the source to BBXFER 1.8 but I keep getting errors when
I try to UnARC it. I'm using NetScape and Windows NT.

Is it me, or NetScape or....

I have notified Bob Puff, but he doesn't have time to look into it right now.
The file is at http://www.nleaudio.com/css

It almost certainly a problem with the server that isn't recognising files with an .arc extension as binary files. So Netscape thinks it is a text file. When loading or saving a text file on a Windows/DOS system the line feed/carriage return characters get modified. This is fine with text, but it messes up binaries.

Solutions:

Ask Bob Puff to modify the MIME types on the server if possible (best solution) or if that isn't possible then changing the extension to something recognised as a binary format (like .arc.bin) usually works but is confusing if it is really an .arc file and should be avoided if possible.

Try another browser (it worked for me with Internet Explorer 5.0)

Use a Unix system to download the file

Check your mailbox (I've e-mailed you a copy of the file, hope no one else does the same) =)

I am looking for the Game Galactic Trader, written in Atari-Basic, as
ATR-File etc. or the Atari-Basic Source-Code. Who can help?

Many Thanks
Claus

Well,
I can do some pics for you, but I guess the producer is important for
you, isn`t it ?!? Thats what I have:

- Star Wars - the Arcade Game- by Parker (Cartridge)
- Star Wars - Return of the Jedi- by Parker (Cartridge)
(Star wars - The Empire strikes back- was never! released officially.
The game is just a clone of an old Jeff Minter game [called Attack of
the Mutant Camels]. Maybe it was done by some fanatics, maybe it was
stolen by hackers/pirates, but finally a cart version of this game does
not exist!)
- Dropzone by Microdaft (Disk) or Americana (Tape)
- K.D. Soccer Manager by Cognito (or Cogito?? a Tape with a big package)
and maybe by Zeppelin Games (Tape with a small package)

greetings - Andreas

P.S.: Yes, Starwars (The Arcade game) was published by Domark on Tape. I
once had it, but ofcourse I sold it, as I got the cartridge...

Well,
I do not have the SF channel here (I am also not sure if our SF channel
is the same as yours - its avaiable in german and english, but you need
an expensive decoder), so I do not know the new movie version of Dune.
In fact I did not like the old movie very well, but I liked the music
from Toto... The Pc version called Dune (sort of gr. adventure) is nice,
but Dune 2 (strategic game) was even better... do not know Dune 2000 or
newer PC versions... greets - Andreas

P.S.: How about a Jaguar version of Dune or Dune 2 ?!? Any volunteers
???

The 1985 movie version of Dune was great! this this they call a remake
is one of the worst movies I have ever watched. The director MUST have
completely forbid any freedom in the actors and outright banned any of
them from having an honest emotion. Everything was all to contrived.

I have written some tools to convert Atari tapes to image files.
So far, none of the emulators supports tapes though.
Lately there have not been much changes to most of these
emulators at all.
However, you can use your PC with APE to actually load the
images into a real Atari. And of course you can try to convert
the cassette images to some .atr image or so.
My tape stuff is mentioned in the FAQ.
You can find my stuff on my home page. The 'C' source
codes are included, so feel free to expand on it.
My stuff is available at:
http://home.planet.nl/~ernest

Keep those XL's/XE's humming.

>
>Anders

It took me some time to dig up my 400, so the response
is somewhat tardy. I have several 400's. Most of them
either have the spring missing, or it is broken. I have

a replacement spring somewhere.... Have to look that
up sometime. Anyway, I have one with the spring still
on the door. The spring is indeed visible on the metal
shielding. Actually, that metal shielding does not really
protect the machine, rather it protects the environment
from radiation of radio frequency signals, interfering
with reception of your radio set or similar equipment.
As a side effect, it does make those machines quite sturdy.
However, it does not seem that the spring is visible on the
door itself. I suppose one end is located on the inside
of the computer. The portion on the metal shielding
is barely visible. But it is visible.

Keep those 400's/800's humming.

I must confess that I would probably like any version of Dune! I have the commercial VHS version of the 1985 release and the 3 hour "director's cut". They certainly updated the special effects for the new release, but I liked the original cast better. I still find the scenes of them riding the worms pretty hoaky... If I had to choose, I'd take the 3 hr version as the "best".

Is your TAP format comparable to Ernests CAS images ?
If I'd get mailed an example TAP or CAS in the next days maybe
I could find some time during my vacation that starts on friday
to try to put some code into atari800 emulator.
No guarantee though since I suspect wife and children will want
some of my time too ;-)

arc601.exe is a DOS mode self extracting, distribution file full of
docs and arc programs one of which is arc v6.01. It's at
the bottom of the page at http://www.softcon.com/ftp/archiver

Correct me if I'm wrong, but I believe that arc500.exe will both arc
and unarc Atari's SuperArc and Superunarc files. Give it a try and get
back, especially if it won't do the arc on the PC such that the Atari
can't unarc it. These files are the actuall DOS application and docs
for it. If the strings get cut in posting, cut and paste them into
your browser.

I remember seeing an advert for The Empire Strikes Back in a magazine - it
even had some screenshots (I think it might have been A.C.E. magazine).
What happened - did they lose the license after running the adverts or
something?

7535. ANNOUNCEMENT: reverse-engineered ROM sources, third revision, now available

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-12 11:47:33 UTC
From: Sidney Cadot <sidney@ch.twi.tudelft.nl>
Message-ID: <3A361055.85C7D4FA@ch.twi.tudelft.nl>
Source record: 40204

Hi all,

The third public release of the reverse-engineered Atari 8-bit ROM
source
code in CC65 format is now available for download from my Atari page:

http://ch.twi.tudelft.nl/~sidney/atari/

From the README:

"This third version focusses on supporting more types of ROMs. A grand
total of 11 different images can be produced now (compared to two in the
second release) spanning a wide range of Atari machines and ROM
versions.
Now it is possible to produce all three known BASIC versions, an
OS-B/NTSC
400/800 ROM image, a 1200 XL OS-ROM image, and four versions of regular
XL/XE ROMS. As an encore, two peculiar ROMs are included: the
Arabic-language XL/XE ROM which comes from a very rare type of Atari
that
was targetted at Arabic-speaking countries, featuring an Arabic
character
set, and the 5200 XEGS ROM."

Any comments are welcomed.

Sidney Cadot

Thanks for the reply. I have yet to get an emulator
for the 8-bit. Just wanted to make sure that MULE
was available and playable. And I also wanted to
get a feel for which emulators were used the most/best.

The Atari800 'series' are excellent, I personally use Atari800win &
Atari800win Plus and find that pretty much almost anything I throw at
them works either perfectly or damn near (although perfectionists will
argue otherwise).

You should find your session of MULE (the first game I reviewed for
Atari User) works more than well enough :-)

If I recall, TurboBASIC's "TEXT" command was pretty good about not
barfing. I don't remember, though, if pixels wrapped around to the next
vertical position down, and to the left side of the screen or not.

As for 40 characters, remember that these are proportional fonts.
One could have way more than 40 "|"'s on the screen. :)
I think at the absolute most, the string should be 320 chars. :)

It's one of those hard to get carts that people buy like it was the last glass of water on earth. Unfortunately I have only seen one person - Bill Kendrick - produce anything with their cartridge. I am still looking for one, but I refuse to pay some outrageous price, which immediately puts me to the back of the line. I think some people just buy it so they can resell it later at an even more inflated price. I remember on here when ebay started up, it was crazy. People were bidding them up in the hundreds of dollars. I'll be willing to wager that they are sitting on a shelf right now collecting some serious dust. Me, I would love one, but am going to wait till I stumble on one that isn't outrageously priced.

Actually most of the stuff I did was originally in Action! Most of it is lost now, playfield editors, 80 column terminal program, that kind of stuff. The Atari side of IBM format disk file transfer was in Action! too.

To tell you the truth, I probably did 10 times that amount and every single time I did something for someone, they asked me to rewrite it in BASIC for them as assembly language subroutines. Kind of wore me out faster having to do two versions of everything I did. There were only a few exceptions.

Right, I am one of the pigs. I have at least 2 so should one go out, I have a spare.

It has been a couple of years since my last Atari system was even set up. I am just now trying to get back into it, but I am incredibly slow just doing simple stuff. Things like setting a drive, monitor, and computer on a table top seem to take me a few months.

OK, I'm good; no ML error checking for screen limits and up to 80 proportional chars in T$. Can do; just hope T-B leaves same zero page locations available. Anyone know the memory map?

In case he doesn't see your post, he has answered this before. He builds the 1489 version into the 25 pin serial connector hood. Saves some money and shipping cost.

Just a by the by. Someone is impersonating him and sending out vulgar insults. Not the same guy in case you get one. I don't know what the guy impersonating him is doing it for.

You are correct! The plain null modem cable needs an 850/PR:Connection or
equivalent device with some electronics. It is two computers talking over a
phone line, but with no phone line.

The SIO2PC "just a cable" must and does contain some electronics like 1489 or
Max232 or equivalent and uses some custom software.

7559. The bug in BBXFER (all versions)

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-13 11:07:44 UTC
From: nisse-ma@reze-1.rz.rwth-aachen.de
Message-ID: <917la0$1b$4@nets3.rz.RWTH-Aachen.DE>
Source record: 40228

Howdy folks

This is the bug in BBXFER that needs fixing:

When copying from Atari to PC (and not vice versa), the file will be truncated at a certain length. The length depends on the version of BBXFER (I tested 1.5, 1.6, 1.7 and 1.8). That is unless the filename does not exist on the destination drive. If it exist, like after you copied it and found out it was truncated, and you copy it again to the same destination, the file will nolonger be truncated. Except with version 1.8. Then it will be truncated at twice the length of the first truncation. Copying it again (3th, 4th etc. time) will be no different from the second time.

Could somebody please fix this?

CU Mathy van Nisselroy

7560. Things I'ld like to be added to BBXFER

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-13 11:22:46 UTC
From: nisse-ma@reze-1.rz.rwth-aachen.de
Message-ID: <917m66$1b$5@nets3.rz.RWTH-Aachen.DE>
Source record: 40229

Howdy folks

I'ld love it if somebody could added the following features to BBXFER:

- If FAT #1 can not be read, BBXFER should tell us and try to read FAT #2.
- An option to show 'longer then 8+3' filenames, plus an option to rename these files
- An option to change names. Especially handy when files start with a number.

And how about a couple of utilities like these:

- a simple PC disk to PC disk copier. Ever seen a PC with 2 HD disk mechs lately? I would be nice to be able to move certain files from PC disk to PC disk without the need to go via the Atari. Especially when one of the PC's here at the U. has f***ed up one of my disks AGAIN.
- a PC disk editor for the Atari. EVen better would be if this could be incorporated into the TASKMASTER on the FloppyBoard.

CU Mathy van Nisselroy

PS I'm not a programmer, but I am VERY willing to beta test.

Hardly. ATari is but one small part of Hasbro. They also have Microprose
for starters - slightly more valuable. The deal also included the video
game rights to any Hasbro product over the next 15 years with an option
for another 5 after that.

In hindsite you can see why Infogrames pulled out of buying Eidos as this
is a hell of a deal. Actually, it was $5m cash and $95 shares.

8 bits ie Atari 400/800, 800XL etc were fine machines in their day and pretty much state of the art. The 16bit series (520ST/1040ST etc) was less impressive but very cheap/powerful. The Amiga had better chips but the ST was a nice clean system to program on. There was also the TT - 32bit & overpriced and the Falcon which had a Digital Signal Processor, good graphics & sound and multitasked but came too late and was also overpriced. There were other machines but you're best bet is to go to www.atari-museum.com to read all about it.

Just copying the files, even with a real Atari, won't do the job, because the first 3 sectors of the floppy have to be changed to point to DOS.SYS or whatever, which is something that happens automatically when you choose H - Write DOS command from an Atari DOS menu.

Yeap, can't remember the URL though. Actually was used more like connected storage if I interpreted the authors comments right.

He did something like have the PC connected to the net just set the DSR<DTR? RTS?> when someone requests the Atari 8 bit. The Atari just sends the HTML everytime it sees the DSR toggle and the PC passes it on.

Just went through a debate in comp.arch.embedded about someone that claims to have a 8 pin surface mount PIC running TCP<?>. Opinions ranged from hoax to so stripped down it is a joke. Still a neat hack anyway. He had a 32kb serial eeprom attached to it for files/web pages.

I'm technically the maintainer of the Atari 8-bit files over at
UMich. I had been neglectful of my duties for a while, but recently,
when I finally had time to go poke around, I discovered I'm no longer
able to log-in!

Does anyone know what's up with Umich?

FYI, my username was "kendric" and I had a Kerberos account (to be able
to get to the atari/8bit directory). At the time I got the account,
my e-mail address was "kendrick@zippy.sonoma.edu".

Thanks!

It would have to be stripped down- those pic's only have 2K of code space and 128 bytes of ram. They can manipulate external memory via I2C for storage. His "network stack" must be extremely simplistic and is likely proxied from tcp/ip into a rs232 serial stream by a nearby PC. So, technically, its acting like a simple http server, but nearly certainly doesn't have tcp/ip or even UDP built in.

They're nifty little processors, having their own internal 4 megacycle RC clock, so after you connect power, you can get up to 6 digital IO lines- a couple of which can also be ADC inputs. We use these devices to generate pulse width modulation for motor speed control.

PIC's native assembly language is a horror to behold much less use, but decent macro assemblers, a Basic compiler and a C compiler exist.

I am sure a lot of people have done a lot of programs with action. I am
more commenting to that particular time frame on here a few years ago
when every other post was someone wanting to pick one up so they could
develop a new super game and revive atari with it. The mindset was that
it was the "must have" programming language and they could wake the
dead with it, as soon as they got their hands on a copy. The only thing
that I every really saw let out to the public was GemDrop (great game
by the way - thanks Bill). It just seemed like everyone else was just
hopping on the wave. A lot of the cartridges went on ebay for
astonishing prices. Kind of like the cabbage patch kids or tickle me
elmo. I actually got threatening email during this time because
suggested that people were paying too much and were not going to do
anything with it. I have yet to see the flood of new games they were so
hot to develop. People get caught up in the frenzy and the inflated
prices that go along with it.

No problem with keeping a spare around. Backups are always good. Like I said, I would like one, but I refuse to get caught up in the frenzy and I'm not under the feeling that everyone has a right to own one. That's another thing, if you owned or had a spare, then it seemed like you were chastized for keeping it from these people who could work miracles if only they had a copy. Funny things go on in here. If you want to pick up the number of messages, then just mention making a copy of Action! They come out of the woodwork.

Actually, he used the 800 byte of code and 71 byte<?> RAM PIC. He said he
used bit banging for the 115k serial link to the router.

I found it kind of interesting. Everyone was speculating on what he could do
in that much code. I know I tossed out that he probably wasn't doing
checksums, just acking everything tossed his direction. Someone else said
error rate is only something like .2% if you do ignore checksums. Certainly
buffering a 572 byte MTU and compression was probably right out.

Never programmed a game for public consumption myself. At one time I did program a Rogue work alike that was set up to use data files/dungeon layouts from a BBS.

I included the ability to transfer a machine language program from the BBS to the client and first thing my son said was "Neat, you could format someones hard drive". That took a lot of the wind out of my sails.

Some of his friends that tried it at the time thought it looked much better then the Ultima III dungeons, but the Ultima III dungeons were nothing to write home about. My sounds were mostly pops and clicks. I can hardly play the radio let alone compose music. It sucked.

Ick. Sounds like a dreadful piece of work to make it anything other
than a toy. One problem with the 4mc RC clock is its not very stable-
being rather temperature sensitive.

On the other hand I REALLY like the idea of having a cheap & simple
embedded gizmo capable of storing data and reporting it, so I think
its the right idea- but having the pic generate/consume a tty stream
and proxy it to tcp/ip via something a little heftier would be lots
easier to work with.

Some time ago I saw a more serious implementation which used an
ethernet tranceiver (Crystal Semi made it- essentially an 8390),
operating in 8 bit mode attached to a PIC, one of the 40 pin jobs.
The code read/wrote full 10baseT/10base2 ethernet packets, doing VERY
basic ip (maybe icmp too), but no tcp IIRC. But, he could talk to
this little rig directly over ethernet. Nifty... ;)

Some of the pic competitors have at least some of the same hardware
nasties that the pic does (Zilog, maybe Atmel..), though the native
assembly languages are probably better. The nasties being things like
code space partitioned into segments, where your code has to remember
to load the right bits into the bank selects so the next fetch happens
in the right place. Or worse, similar paritioning of the ram space.

I keep wanting to make a PIC interface between an ide hard disk and
the Atari SIO bus. It would need lots of work to make it really

usable though... I've an 8051 controller which would be easier to deal with.. and an octal uart too... all I need is time to do it!

> this little rig directly over ethernet. Nifty... ;)

I think Rabbit Semi is into this too. 805x derivative.

But on the "a PIC in every toaster" topic. I may be reading too much into
what the guy was saying, but it sounded like a bit of spiel for marketers
and consumer products. I don't think he came right out and said it, but it
is kind of implied by his actions.

There is some pretty heavyweight money involved. Things like your toaster tells General Foods it is getting used every morning so they send you a Pop Tart and Toaster Struddle coupon.

The level of interrigation marketers can do using the appliances connected to the net this way kind of boggles the imagination. They will know how many loads of laundry you do a week, how many pots of coffee you drink, how many times you open your refrig, all for the one time cost of $1 PIC per appliance.

7578. Need DOS Disk

Hi, Does anybody know where I can get a 2.5 dos disk for my 800xl,1050?

If anybody has one they can copy, I would be glad to pay you for a copy.

I didnt receive my doubler chips yet, so I cant copy it from my pc.

Please help!!!

After 20yrs it has become time to part with a big part of my life, Hardware, software, magazines, you name it almost I have it. Far too much to begin to list.

Would like to see it go to a loving home, but owing to the size of the collection would have to be in Australia. Contact me if you are interested and we can talk through a deal.

Regards,

Bill

I'm not. Most of the gamers MS are aiming at have probably never heard of
Atari or at least have vague memories of some defunct console maker. Might
as well be Binatone in terms of the value of the name as a console maker
to your average teenager/20's gamer.

Third time is a spanking. Or a plonking as the case may be.

This dude suckers people who don't know. I nearly bought a Jr. Pac Man from him until someone on RGVA pointed out that it was an Oshea title. (Then I dled the ROM for my PCAE and haven't even gone and paid the 80 cents for it...)

Date: 2000-12-15 04:01:50 UTC
From: Chad <1wag11nerch1@bellsouth.net>
Message-ID: <RIg_5.9170$BN1.52968@news2.mia>
Source record: 40162

I am interested in trading an Atari 400, in great condition, without power supply for a power supply for an 130XE, anyone interested? I have a jpg of the Atari 400. I am only interested in the continental US, prefer as close to FL as possible, so shipping would be reasonable from both ends.

Photo:
http://i7.ac.yahoo.com/users/5/3/9/4/vdr781-img547x428-976837555dec14^01.jpg

I have it up for auction under the same trade, or for $15 (which the latter probably won't happen, but if it does, that's ok too :).

Specifics:

5 V DC 1.5 A (7.5 W) Atari#CO61982/CA024814 adapter:
600XL,800XL,65XE,130XE,XE Game System

Hello, my name is Benjamin Smith. I'm a Collector & Jaguar Game Player.
With all my games to play, I have no one to play Games with on my Atari
Jaguar. I live in Portland, Oregon. USA and I'm looking for Atarians to
play Jaguar Games with. You don't necessarily have to have a Jaguar.
Most any Atari will do. I'm thinking of starting Atari meetings in
Portland. Focused on Gaming but still supporting any Ataris. Call Ben
anytime at (503)256-9974 or E-Mail:

e-mail: atari@benjamin.net

If I'm unable to answer, leave a message and I'll call you back.

Sorry Paul. Seems I have to disappoint you. Since nobody sent me
an example file and I have no tapes myself (I have 3 1050s
and a lot of disks but never owned a cassette player) I won't
be able to work on it. No sense in trying to implement some code
when I can't check whether it works :(

Black to luma, white to chroma, yellow to audio is how I have mine,
and don't forget to check the switch on back that selects the fron or
back connectors.

Mine is an Atari 800.

I used to program quite a bit in Action! I wrote a little text viewing
program called VTex using Action (and a little assembly), and it turned out
OK (at least, I think it did :). I think VTex is still on some web/ftp
sites. All this talk makes me kind-of regret selling my Action cart, but I
wouldn't really have time to so much in Action anymore. Still, it was fun
in its time.

Atari800 for DOS (actually the DOS included in Windows 9X) allows OSS supercarts, so I can program in ACTION! on the PC. For anyone interested, if you have a cart, but have lost the instructions, I've scanned my manual using an OCR program and fixed most of the scanning errors.

Depending on how hard you want to do it.

The Atari's paddle controllers are resistive in nature. If you don't need a lot of resolution less then 7 bits, you could just use them with a thermistor. IIRC, most thermistors available at places like Radio Shack are ~4k-7k. What you can do is either wire them in series with another resistor to get the reading on scale or just buy ~10 of them and wire them in series.

There is a RTC for the Atari, it is called RTime. Not a lot of them around, so you may have trouble finding one at a good price.

There are other ways of doing it. Been a long while since I used them, but there were CMOS divide by 3600 counters available way back when in 8 pin DIP packages. Line frequency stepped down via a transformer/3600 => a pulse a minute which would be excellent for to sync an Atari. Not to fast or too slow.

Asteroids.

It's the reason I bought my Atari back in 1981 or 82. I'd been playing it on an arcade machine. I told myself I was going to learn to program and do all kinds of cool stuff, but I really wanted to play Asteriods.

Regards,

Nick

I always hear about the 1702, but I've never seen any mention of the 1701 (which has been my primary Atari monitor since the mid-1980's). Anybody know the difference between the 1701 and the 1702?

I just wish Commodore had stuck to making monitors -- my 1701 has been in heavy rotation for a long time and has never given me any problems. Atari 800s and Commodore monitors -- what a combination!!!

Star Raider/Star Raiders (which is first, and what's the diff?)
Pac-Man (a little stretched, but mostly true to the original; even my mother, who's 62, still plays it when she's here)
Defender (damn, what a good translation. a little easier to play than the arcade, but still worth hours of fun)
Joust (another great arcade translation. easier to flap, but still tough to pop the pterry!)
Donkey Kong (the 1st edition to include all of the arcade levels)
Gyruss (Bach's Toccata & Fugue never sounded better than on an 8-bit Atari)
Activision's Space Shuttle (still kicks ass after 17 years -- defines the term RTFM!)
Computer Chess (I know I'll catch flak for this, but this cart was the only chess playmate I had for years)
Missle Command (another arcade port that was true to the original)
Galaxian (I guess I'm biased to ports, but Atari was the only platform that could do them justice at the time)

Change this thread to include disk-based games, and the list will be quite different. Atari had great carts, but their disks tended to be more engaging -- i.e. MULE, LodeRunner, Rescue on Fractalus, Fort Apocalypse, etc.

If using an Atari with the bus interface, an enterprising user could
interface a standard RTC device to the address/data bus, though I
imagine that goes quite a bit beyond what the poster was looking to
do. To stretch the point a little further, the same standard RTC
chips could be interfaced via the joystick ports.

http://www.bgmicro.com

usually has something interesting along those lines...

I tried every combination, and it did not work
on the Atari to 1702. Then I tried the composite
input, I had to make the cable myself. I got all
the parts from radio shack. I bought a six foot,
five-pin din cable, and added two rca jacks to
the other end...
I got the pinouts here~~~~>http://www.dial.to/atari

It worked fabulously well, it looked just as good
as the original coin operated video arcade quality.
It also worked with the same quality on my
commodore 64. If you want the best quality
and the lowest prices this place has everything
you need, including 1702 monitors. I bought
over $600.00 worth of computers from them
recently, with manuals, in the original box.

http://www.4jays.com/
Has Commodore 1702 monitors...
They have these top quality and lowest prices. They also
have everything else for all of your Atari, Commodore,
or TI 99 4a needs. I have spent many hours searching
the world, and found a list of every Atari vendor, and I
called everyone of them (about fifty), and these guys are
the very best... I spent over $600.00 and bought many
of their computers, they come in the original retail box
with manuals... The Commodore 1702 monitor hooked
up to an Atari 800 xl through the composite video input,
produces quality identical to the original Atari coin
operated video arcade games.

http://www.4jays.com/
These guys sell both, and told me that
the lower priced 1702 produces better
quality, so I bought one. Even through
the composite video input, without the
800 xl video upgrade, the quality is
identical to the original coin operated
video arcade games.

Are there 3 jumpers and 2 or 3 trace cuts on the side board? If so then most likely yes it is an Archiver.

The "open" code is contained in the first two bytes of the ROM chip. If you have access to an EPROM reader/burner (or already have the chip saved to a file), the first two bytes you see in hex format is your open code.

The easier way to open it is with the Archiver/Editor disk. This disk has a little program on sector 720. To open the drive with the disk, put the A/E disk in the drive, THEN turn it on. The drive should read sector 720 and open right up for you.

Hope this helps.

And I can personally vouch for the quality.
I bought about a dozen systems from them
spending over $600.00, each one of them
was in excellent (slightly used) condition
and came in the original retail box, with
all the manuals... You won't find better
prices anywhere, and to get better quality
(some dealers still have brand new systems)
you must pay at least triple.

Message-ID: <NmM_5.457440$4d.59572329@news02.optonline.net>
Source record: 40108

I've decided to use the LM70 for the temp reader which is an SPI/MICROWIRE interface which only uses 2 io lines and is easy to use with the js ports. I was looking at an lm334 to use with the pot ports, but would rather go digital. I will probably get a clock chip which works the same way as I need real time vs. pulses, in case the computer decides to reboot. I really like using the 8 bits for real world control and they offer a great alternative to basic stamps and microcontrollers. Thanks for all the great input.

Just a BTW comment. TI and several other manufacturers make serial ADC
chips. I'm familiar with the 334, used it in several designs.

I frequently ran into problems driving things directly from the J/S ports,
but have had excellent results adding a 2nd PIA chip and driving them off
that. Probably won't be necessary in temp sensing unless you are using it to
control a nuclear reactor or something.<grin>

The cartridge only has 3.3c and has one 'problem' you have to pull it out of
your Atari when it loaded, I made a switch on my friends cartridge so he
could switch it off and didn't need to remove the cartridge...
All software (external modules) have to be loaded from disk/harddisk....

Bob Puff and CSS manufacture the Black Box (parallel P: and serial R: and SCSI hard drive interface) which supports their Floppy Board which will control generic standard mechanisms at from 88K, 180K, 360K, 720K, 1.44M. The mechanisms are probably ~$15 ($3 to $50 on pricewatch.com) with the BB and FB totalling from $200-$300; depends on how you define 'inexpensive'. SpartaDOS will definitely support those densities and MyDOS 4.5 also most of them.

I can't comment on version-one of the M.W., but Monkey Wrench II was
a right-side cartridge for the 800. The 800 had two cartridge slots;
M.W. II was one of the extremely rare carts made for the right slot.
It was a handy programming aid for writing programs in Basic.

If you were to try to get it to run in emulational mode, you'd have
to load M.W. II into the right cartridge slot's section of RAM. Even
if that worked, you'd also have to have the M.W. II's command list in
order to know what to do with it.

I answered this in c.s.a.st a few days ago, but it occurs to me that you might not have seen it there. Ergo, I'll answer here, too.

The ftp address for Umich seems to have been closed for months. I know nothing about your special access, but AFAIK the files seem to be accessable by the public from the web at
http://www.umich.edu/~archive/atari

Perhaps you can find someone there to contact about your access.

From: R Stag <stagger3@yahoo.com>
Message-ID: <91hbq60op0@enews3.newsguy.com>
Source record: 40131

Hi, Today I received my Us doubler chips. I installed those with no problems.

Im trying to use the program "AtariLink" to copy files from the PC to a 5.25
When I format a 5.25 disk on the pc, the 1050 cant read it 90% of the time.
I did manage to get 2 disk to work. I have 1.2meg 5.25 disks that im formatting
in AtariLink. I cant format on the Atari with these same disk! Do I need to use the old single sided disk?

Is this the floppy disk that im using, or is a problem with the software?

Thanks!
R Stag

I guess Im going to have to build that SIO2PC cable. How long can this cable
be and still carry the signal with no problem???

>Anyone know if its available anywhere as a cart ?<
I've never tried the image with an emulator. They do pop up every few months on eBay.
There were (at least) 2 versions. The first version was for the 800 and then a second for the XL/XE series. They are incompatible with the alternate machines. The XL version will work as a single cart (with BASIC) or mapped into a 16K cart (27128 or 2764 times 2) with BASIC.
Fairly handy cart, including a small machine lge. monitor. But if you use Turbo Basic or Basic XL/XE,they provide many of the same features, plus being a much better BASIC..

7667. Version 14.50 of Westfront PC released

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-17 06:53:05 UTC
From: pap3@dana.ucc.nau.edu
Message-ID: <91hnsh$1o5$6@usenet.nau.edu>
Source record: 40135

Subj: Westfront PC Version 14.50 released

Hello,

Version 14.50 of Westfront PC: The Trials of Guilder has just
been released. Improvements include:

o - New holiday additions (falling snow)
o - Quests are now updated (more consistency)
o - Several more rooms can now have contents in desc. examined
o - Room total stable at 1,578 rooms and 3 continents
o - Quests are stable at 45, with over 50 unique puzzles
o - Several cosmetic changes made to gameplay and interface
o - Help and documentation has been vastly improved
o - Saved game editor included
o - Inventory total extended to maximum of 18 items (from 16)
o - Bag total extended to maximum of 8 items (from 6)
o - Hover total extended to maximum of 18 items (from 14)

URL: http://www.geocities.com/dunric/westfront.html
Filesize: 933KB (for Windows 95/98/NT/Me/2000...An MS-DOS version is
available upon request)

Characters from versions as early as 0.47 (1997) can be
played on the current version of Westfront PC: The Trials of Guilder.

Versions of "Westfront PC: The Trials of Guilder" for Macintosh,
Unix/Linux, Amiga, Commodore 64, Atari, Apple II and Sinclair/ZX Spectrum
are currently being worked on/considered (Westfront PC was originally
coded on my old Commodore 64 in 1993). The setting for the game was Oslo,
Norway.

If you'd like to play the Windows 95/98/NT/2000/Me version of "Westfront
PC: The Trials of Guilder", please visit my website here:

http://www.geocities.com/dunric/westfront.html

The game was released into the Public Domain on August 3, 2000.

If you have any questions on Westfront PC, please contact me:

dunric@yahoo.com

I can also be reached through ICQ at the UIN#: 12234336

Finally, for those seeking help on gameplay, please read
the included Winhelp file "WFPC.HLP" before playing for the
first time. You may also visit the following web pages for

additional help information:

http://www.geocities.com/dunric/westfront.html
http://www.geocities.com/dunric/tips.html
http://www.geocities.com/dunric/maps.html
http://forums.topresult.com/dunric/wwwboard.sht

Thanks! Have fun! :)

Regards,

Paul Panks (a/k/a "Dunric")
Author of "Westfront PC: The Trials of Guilder" (and other games)

It is the media on the disks. Can't write to a 1.2 meg on an Atari. Even reads may cause a problem since the track is only ~1/2 as wide on a 1.2 meg drive vs 1050. IMO: It is really best if you can find a 360k IBM drive, but any port in a storm.

Others responded in your other post. Only thing I will add is RS232 is spec'd to go 25 feet. Never tried anything longer then ~9' myself. I have seen problems with weak POKEY chips and dirty contacts on SIO cables causing problems in long runs. I'd just advise you to get a fairly good SIO cable to start the project with and try to do it all with as few cables as possible. Don't have 4 drives, a printer, a cassette, all hooked together with 6" SIO cables and the SIO2PC cable hanging off the end of the chain.

Actually the RS-232 is specs allow up to 50 feet. However, on occasion
I've gone as far as 90 feet as long as I keep the speed no higher than
28.8kb/s.

I submit it is the diskettes; and it is not the sides, but the density. There has been a lot of discussion here and on the A8 mail list about the coercivity (magnetizability) of the 1.2M HD 5.25's and its (in)compatibility with the heads of 810's and 1050's.

Do you have a source/data sheet for that spec?

All I have is some old Motorola data sheets and they are still in the "19k
baud max, 25', 300 Ohm to ground will be interpreted as logic level 1". I
think my newest reference source is from the 80s.<grin>

>It was/is an FTE 65816 upgrade. Several people have them.<

How about someone who has one describing it in some detail. I've heard that it is not much larger than the 65816. (?) It would be interesting to know who has the rights to it. I have also heard that FTE did not design it. If the rights do not reside with FTE, perhaps the technical info couuld be shared, which might help development of others.

Welp, I think it was another Wooley type thing, but I could be wrong. I think Bill Kendrick has one.

But the problem with the first go round was the same as the Dataque Turbo816. Everything in the Atari was slaved to 1.79 MHz, so instead of a 6502C running and excecuting 6502 code, you had just had a 65816 running and excecuting 6502 code. The Turbo 816 was more or less a successful failure and the Sweet16 ended up following in its footsteps. What I mean is it did everything it was supposed to, but lack of neat stuff you could do with it limited the market.

There were several things that had to happen IMO. Things like something other then an assembler for it, killer ap as it were would have helped. FTE was in a good position, rights to the OSS languages meant there could have been versions [BASIC XE, Action!] that used the 65816 op codes. Just by the time everything came together it was a bit late.

Since my main 800xl hsa about the 3rd or 4th of these ever sold installed,
I guess I can comment on it...

The entire setup is a 65816 on a circuit board; another IC is on the
bottom. I believe that one is used to multiplex the data lines, and use
them as additional address lines. This would permit the '816 to access up
to 4 megs (I think it was) with a properly constructed upgrade.

John Harris' MAE does support the '816 instruction set; I've created a few
small, short programs to see how things work. But I only know of one
program released that took advantage of the '816 instruction set and memory
- DataQue had a spreadsheet cart.

Hope this helps,

David P.

Mathy,

I just switched to v1.8 and BBXFER'd several disks of stuff over to the PC. Everything made it fine with no truncation at all. My files ranged from a 2 - 20k in length. The source disk was a SpartaDos 3.2g single density, and the dest disk was a 1.44MB FAT.

What are you doing different that might be causing the problem??

I'm using MyDOS. But since Bob Puff likes MyDOS a whole lot better then
SpartaDOS (just like I do), I can't imagine it not having this bug under
Sparta. You better check out these files, since there are NO error messages
UNTILL you try them out. And these files are truncated somewhere between 15
and 20k (depending on the version of BBXFER).

Incredible! If you examine the pictures, you can see an old PC sitting
on the floor, and not set up. They are using the 8bit! I tried to zoom
in to take a look at the software running on the monitor screen, but
you can't tell much.

I don't think that is a standard 800XL is it? The hardware bears a DoD
sticker. I bet it was used by US military children at schools in
Germany, and this hospital got it as a cast-off.

> Speedy-Hardware?

No,
there isn`t any MyDOS version that supports the Speedy highspeed SIO directly upon boot-up time. But there is an alternative SIO driver for Speedy floppies (a COM file) which might be loaded automatically using the Autorun function. (Autorun.Sys under MyDOS 4.50; Filename.AR? under MyDOS 4.53, where Filename means any legal filename and ? means a number from 0/zero to 9).
greetings - Andreas

P.S.: I have collected many MyDOS files on one MyDOS 4.53 (3-) tool disk.
3- means 3 digits for file and free sector counts (where possible, i.e.
if less than 1000 sectors...); there is also a 4.53 version which uses
4 digits... Just mail me to get it !!

> Before you buy.

Well,
there are several ways to use SIO2PC and some Atari application. Me, I use SIO2PC under DOS 6.22. The SIO2PC hardware is connected on one end to the PC (COM port 2) on the other end to an Atari XF drive (5,25", set-up as drive 2!). The little Atari is then connected to the XF drive...

1) if you already have some bootable ATR files on the PC...
- go to the SIO2PC subdir, load SIO2PC (.EXE)
- the program asks for the COM port first, I have to enter 2 here (since I use COM port 2 on my PC, maybe you have to use another port)
- Next the program is ready for input, so I enter "L" (without quotes) and "1" to load and install an ATR file into (emulated) drive 1...
- a pull-down menu appears, here I can choose any file that is in the subdir of
SIO2PC (C:\SIO2PC*.*) or simply enter a new dir (for example D: or any other dir/subdir I want)
- choose an ATR image and press return. The image is now installed in drive 1 and can be booted (if it is a bootable disk image) upon powering-on the A8 (which is connected to SIO2PC)...

This way you can boot-up any ATR image from SIO2PC. You can also boot-up a sector copier and then copy/convert some ATR images to original A8 5,25" disks. Or you may boot-up a DOS and copy files from ATR images to A8 disks (for example boot-up MyDOS and copy some files from 1MB Mega-Images down to the A8).

2) if you do not already have bootable ATR files on the PC...
- go to the SIO2PC subdir, load SIO2PC...
- chosse your COM port first...
- next enter "C" to create an A8 image on the PC, then choose "S" for

Single (128 bytes) or "D" for double (256 bytes) sectors and "2" for
drive 2 (or 3 or 4 for drives 3 or 4);
- at last press a number to choose the format: 64k, 90k, 130k, 180k,
etc.
(i.e. if you transfer a SSSD disk, you press C,S,2,2; SSED would be
C,S,2,3;
and SSDD would be C,D,2,4;)
- next boot-up a DOS disk or sector-copier from your A8 and a connected
A8 drive (for example 1050 or XF drive, setup as drive 1!!). The process
is easy: power-on your A8 and it will boot from the connected A8
drive...
- next copy your disk using the sector copier (or the DOS copy option)
from drive 1 (the real atari drive) to drive 2 (the SIO2PC emulated
Atari image).

This way you can copy as many disks as you want to ATR images. I
prefered to transfer a sector copier first (to an ATR image) and then
copied all A8 disks using this copier (image) for all further transfer
actions... -Andreas

P.S.: Sorry, when all this sounds complicated, but after a while you
will get around, I think... if not, search for the original SIO2PC
documentation or any other emulator docs (like APE, etc.).

Well,
Sparta 3.3 on cart means: you have the 3.2xx (originally) disk version
on a cart.
It does not include init or xinit (or any other external command)
ofcourse. You still have to load it from disk... -Andreas

P.S. This means, Sparta 3.3 cart version is absolutely not the same as
Sparta X cartridge !!!

Hello,

I'm looking for SSI's Battle Cruiser I & II games for the Atari 8bit on floppy with manuals! I want to buy them! Please email me if you have these or can get them!

Whoooah! Time to reign in those stampeding broncos there, Bubba! We don't need and hot-flame heads on this board! While you are correct about Oshea's CURRENT pricing, a few months back they were indeed selling all of their games for 80 cents apiece with no minimum requirements. So, first of all, make sure that you've got your facts right before you start yelling and slinging rude names around. Secondly, polite responses will always be taken in a better light and won't be likely to have others throwing mud back at you.

7709. Atari 8-Bit Web Browsing?

Newsgroup: comp.sys.atari.8bit

Hi all,

Just started reading the NG again after a year + absence. Last time I
was on here, there appeared to be several people working on a web
browser for the 8-bit. I checked out the Project Phoenix page, and it
does not appear to have been updated for about 2 years. Can anyone tell
me what, if anything, has happened?

Thanks!
Dan

Ask and ye might receive; Mirko now has it in beta testing and Andreas may look it over as well. All relocatable code in a string for USR(ADR(MAP$),X,Y,ADR(T$)... If it passes with no bugs, it should be available to anyone needing a quick GR.8 text mapper routine.

The design of the fonts has the character maps already shifted or justified to the left so that all we need is the width in FL$ to compute the location of the next letter.

There is a TCP/IP stack you can download.

http://home.columbus.rr.com/ksiders/ice.htm

I know from experience that Ken Siders appreciates beta-testers, so
you should download it and join the team if you have an 8bit setup
with modem.

I think my version of the monkey wrench is "version I", and it, too,
plugs into the right slot on the 800. If memory serves, it wasn't keyed
to prevent you from plugging it into the left slot, but the machine won't
boot if you do. (Not that I tried it or anything :)

Were there ANY other right slot carts?

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

I saw your DCS, and I think, it is a really good system. All my respect
belongs to atari-users, who are programming in assembler/maschine-language.
But: If your program loads menus from disk, you have the main memory free
for some graphical effects - are you planning some of them? Or may be a DCS
in Graphics 8 and with proportional-font?
In my BOSS-X(E)-Systems, I use the RAM-Disk for the main-datas and the
main-memory for executable/TBASIC datas. It loads programs for viewing files
from the ramdisk.

Mirko

Message-ID: <3a401ca8$0$1514$53a6afc1@news.erinet.com>
Source record: 39993

Hello, Bob.
I think that vendors (Video 61, Best, B&C, Bravo Sierra, maybe 4jays)
may have US Doubler packages from where-ever these vendors
get their stuff. By that I mean from stocks of USD that were produced
legally and just not sold yet. In addition, the writer (R. Stag?) may
have gotten a US Doubler chip set from someone used. I know I
have a USD that I haven't used and should sell. I would say the
person very unlikely got unauthorized/pirated chips that someone
burnt and sold him.
So, Bob, just because you own the rights to USD, doesn't mean
that vendors and individuals can't sell, either used or new, USD
that are still floating around and have been obtained legally.
Or am I reading you wrong?
Russg

Check the side board for a 7805 or 7812, If you have an ohm meter set
it to Ohms then check from center to ourter right side and left side of
the unit. If you do not get a reading on each side replace the part.
Should fix the problem.

Question for you? You stated you didn't receive a Dos Disk with your USD doubler,just where the hell did you get your USDoubler? As far a I know I am the only one that has the Rights to Distribute this unit!!! And while I am asking just how much did you pay for the chips with out rights?

There is no wonder Atari support is fading rapidly... I am still here, still support, repair the units, and damn well with fight for what I have the Rights to!!!

I have spent $1,000's since 1988, to support your and my habit the Atari 8-bit granted I have been screwed before and see no reason for it not to continue. But at this point in my life see no reason not to put forth my efforts in my earlier support, and go for the gusto!!! You may ask me for what I own rights to and I may if I am willing to pass them along to you for nothing, but you the Atari user think what I have rights belong to you for nothing have another guess coming.!!!

I am flexible, have offered others access to my rights, and have not been demanding upon them or their programers, but when someone blatantly abuses my rights I guarantee you I will put up one hell of a fight. I am not Mike Hohman!, I have agreements or copyrights in my poession and will defend all to the best of my ability! I have never screwed a Atari 8-Bit user not do I have to hide from not producing, or sending out a Product, I have said I have available for the community!!!

With this I truely wish each and every one of you a Very Merry Christman, and a Very
Happy New Year!!

What kind of price are we talking here? Didn't know they were still available, ofcourse I have been out of the Atari scene most of this year (shame on me though, by the sounds of it, you've had them all along :-), I'm just now getting back into my Atari's, this time they will have a permanent place on my desk!

My copy plugs into the right slot; its formal name is Monkey Wrench
II. There was an earlier version without the "II" in the name. As I
recall, the later XL/XE version was also marketed as Monkey Wrench II.

Mathy,
Boy that was some huge chunk of wicked code... but I believe I've fixed the truncation bug and I'd like you to try it out (I just transferred a 200k file over my floppy board!)... only problem is that the CSS site says explicitly that no modification & redistribution may be made of the files without express permission from Bob. So... we will need to ask permission and then I could make the modifications available.
I can explain the changes very simply also if you are interested. If you have Mac/65 it should be a snap to compile it yourself.

Howdy Andreas

>Well,
>I am not James, but I would like to get this software (since I have the
>IDE interface from Mathias Belitz). greets - Andreas.

The ASPI software only works on the BlackBox for now. Sorry. If you want
updates for the MSC-IDE software (not ASPI, yet) try http://www.birmanns.de

CU Mathy van Nisselroy

PS if you want ASPI for the MSC-IDE tell Matthias Belitz. He got zero response
to his article in ABBUC Magazin.

If you could send me the fixed version that is ready to run, that would be
great. I'll test it and then we ask Bob, OK? He told me himself that he had
no time to test and fix it himself. I do have MAC65 on disk, but that's all.
I tried to compile some source code once. Didn't work.

From Thursday 12.00 noon Central European Time (which is SIX hours ahead of
Eastern Standard Time in the USA) till January 8th I will not be able to come
here and check my Email!!!

CU Mathy van Nisselroy

PS where/how did Bob screw up. (sorry, no other word comes to mind.)

7729. RIP format

2&#65533; the way most people work around that is to write a program to patch things separately vs distribute the patched code. It takes a bit more time, but AFAIK is not even a point of contention between end users and software producers. I've done short patches where I'll just use BASIC's GET & PUT to with DATA statements to patch others people code and haven't even had a whisper of protest.

```
The no modification is not valid on its own, the redistribution is the key
phrase. If you own the software you can do anything you like with it. Take a
blow torch or letter punch to it if you like, it is yours to do with as you
please. Patching your software is considered fair use.

7733. Announcement: cc65 2.6.0 released

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-20 16:03:18 UTC
From: uz@musoftware.de
Message-ID: <91ql86$d7r$1@moppi.musoftware.de>
Source record: 40052

[I've sent this to the moderator of comp.sys.atari.announce but didn't get a response, so I'm posting it to c.s.a.8bit myself]

I'm proud to announce version 2.6 of CC65, a C crosscompiler / crossassembler combo for 6502 systems.

CC65 has C and runtime library support for many of the old 6502 machines, including

- The Commodore C64, C128 and the C16, C116, Plus/4 machines.
- The CBM 600/700 family (programs run in bank 1).
- Newer PET machines (not 2001)
- The Apple][(library support by Kevin Ruland <kevin@rodin.wustl.edu>)
- The Atari 8 bit machines (thanks to the Atari team)
- GEOS for the C64 and C128 (GEOSLib by Maciej Witkowiak <ytm@elysium.pl>)

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

New in this version:

* All bugs mentioned on the bugs web page for version 2.5 are fixed.

* Several new commands/features for the assembler, including a repeat statement and target specific character sets.

* More 65C02 support.

* Module constructors/destructors (assembler/linker).

* `const' is honored in most places now, `const' data goes into the RODATA segment by default.

* Lots of larger library routines rewritten in assembler for speed and size (heap management, printf family).

* New object dump utility.

* New disassembler and assembler --> HTML converter (beta!).

* New low level disk I/O module for the Atari, thanks to Christian Groessler, <cpg@aladdin.de>.

* New mouse routines for the Atari machines by Christian Groessler and Freddy Offenga, <F.Offenga@student.kun.nl>. The mouse routines for the C64 are now debugged and should work (but still beta).

* Other stuff.

There is still no support for the following features:

* Floats and bit fields.

* File routines on most systems. The 8 bit Ataris are the first
machines that do have full file I/O support (besides the ACE port
which was dropped some time ago). Please note that the complete CBM
family doesn't have file I/O support!

* The 80 column mode on the C128 is not supported by the conio library.

Available packages:

As usual I will provide the complete sources and several binary packages,
including RPMs for RedHat Linux. Linux is the primary development platform,
so the sources do compile out of the box on Linux machines.

Please note that there are now separate RPMs for the compiler proper and
the target specific libraries. To develop for one of the predefined target
systems you need the compiler RPM package *and* one of the target machine
packages.

Binaries for DOS and and Windows will follow or may already be available at
the time you read this. OS/2 packages will again be available, but since
there are almost no downloads for OS/2, so the host platform may get
dropped in the near future (again).

Download:

More information information and a download link, please visit the cc65 web
page at

http://www.cc65.org/

Thanks to all who sent feedback and suggestions and of course to anyone who
helped developing cc65!

7734. Re: The bug in BBXFER (all versions)

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-20 16:46:43 UTC
From: Dan Vernon <danver@halcyon.com>
Message-ID: <91qnis$vs3$1@brokaw.wa.com>
Source record: 40055

The bug is basically that something (I believe in the IBM-PC FAT routines) is clobbering some memory. At this point, the extent appears to be isolated to overwriting the buffer length, which is very critical, and which is why the code is truncating the files. There's another temporary variable that seems to be affected as well, but it is initialized before use each time and therefore not a problem. The temporary fix I have in place now is to add a dummy word after the buffer length (BUFLEN). I called it POUNDME.
I'm still working on this problem though, since it would be best to find the code that's overwriting the memory. Also I'm seeing some other bugs and irritations (in the original 1.8 version too!) in which the dates get messed up sometimes (maybe just a Sparta thing?), and also a few Disk Error #144s when they were not warranted. Also the dos path name resolution seems a little quirky at times. Anyhow... I'm going to keep fixing stuff, and I'll keep you posted. I'll probably try to contact Bob after the holidays... probably early next year. I've really been wanting one of those CSS Eprom Burners too, and thinking its about time to order one.

take care,
-Dan

The A8 SIO connector is 13 pin...
The PC parallel P: port is usually 25 pin and the PC serial port is normally 9 pin or 25 pin.

FamilyNet HQ: Telnet:\\www.family-bbs.net

Well folks, this is just to get the word out that there will be no official Atari chat being so close to the holidays, so have fun visiting friends and family, watching Christmas specials, and all that. Or visit with each other at:

http://stargate.cs.swau.edu/atari

Sorry I didn't get the word out sooner but I've had server problems with Southwestern Bells lately (how funny that it would be the service I pay for and not the non-profit BBS I actually use that would poop out.) :)

Anyway, take care, and we'll pick up again next week Thursday (December 28th) at 8pm CST to talk about all the Atari stuff we got right? Until then be safe, and let's see that we all make it through the holidays in one piece.

God bless,

Doctor Clu

In a recent message Bob Klaas said:
>> ... I am flexible, have offered others access to my rights, and have not been demanding upon them or their programers...<<

Hi Bob-
I would be very interested in discussing the purchase or licensing of the rights for the U.S. Doubler. I would only ask as a pre-condition, that you would be able to supply objective evidence of your ownership or the terms of your license from Mr. Hohman. Otherwise, as a prospective purchaser or licensee, I could find at a later date that Mr. Hohman or others might claim that they retain the rights for the U.S. Doubler, and I would be in violation of their rights. Let me know -- I am serious in this matter.
Regards,
Larry White

Wow! James, what a massive collection; just wish the Antic & Analog disks started with earlier issues.

I built my SIO2ST(PC) setup just last week, using the 1489. I plugged it into a cable running to my ST. I used standard 8 wire telephone cable. The length is 100 feet total. Works just great.

I update my catalogs once a week. Just before this message is posted.
So when you see a new posting, check my Catalogs. After I post this
message. I'm off for the weekend. But I'll be back after the weekend.

e-mail: atari@benjamin.net

To make room for new stock, Bravo Sierra Computers is holding a YearEnd
Holiday Sale. Everything is 10%-30% off! Atari Orders for $50 and up
are 10% off, Orders $100 and up are 20% off and orders $150 and up are
30% off provided the customer claims the discount in E-Mail. This Sale
covers Atari Jaguar, 8-Bit & ST. This Sale does not cover Monitors.
Customer pays Shipping. So order now while supplies last. Get your free
Atari catalogs at: www.atari.benjamin.net or E-Mail atari@benjamin.net

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari
64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories!
View Atari Catalogs on the Web at http://www.atari.benjamin.net & Jump
to my FTP site linked to my WebSite so you can Download Free Catalogs
or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's not an inconvenience. I do ask that you specify
Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you
by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can
attach text files to your E-Mail. Catalogs are just regular ASCII text
files so you can download them into your text editor & view them, edit
them or print them out! It would make things easier for me if you take
my Catalogs, load them into your text editor, delete what you don't
want and E-Mail me the rest! To expedite things, include your complete
Mailing address so I can figure your Shipping/Postage & Handling. I'll
be back after the weekend.

Hi all,
pls help in getting some games running.
I insatlled latest xformer2000 arati8bit Emulator, tried in 800,800XL
and 130XE mode
but the following games wont work.
Any tips are welcome!!

Apple Panic-> player cant be moved after start.
Caverns of Mars-> same problem, only fire works, no movement left/right
MULE-> just the start picture 'MULE' , no further game start

best regards, Bandie

7759. ATARI joysticks running with xformer 2000 ??

Hi,
i like to use the old style Atari sticks on my PC.
xformer2000 supports joysticks at com ports/parallel port.
How to get the Atari stick with a selfmade cable to com port???
Pinout required as well.

regards, Bandie

Ya know.
I bought a 1702 monitor new in 1986 for $250.00. It's currently hooked up to a VCR in my kids room. This thing still works as perfectly as it did the day I bought it. I never thought I would hear of someone "lusting" for one :)

I can't speak for XFormer 2000, since I don't use Windows,
but I know Atari800 (for Unix/Linux) is quite good.
There's a Windows port called Atari800Win.

From: taj16@dreamscape.com
Message-ID: <t45l1489sgq749@corp.supernews.com>
Source record: 40089

I was wrapping Christmas gifts today and needed some TO/FROM tags, so I fired up my 130XE and my Ol' Hackers' Print Shop Utilities Disk and printed some out. No muss, no fuss - just a few keystrokes to tell the program what I wanted. It was most refreshing.

I'd pretty much quit using my XE since a friend gave me his 4 meg Mega ST system. Now, I must admit that with many things the ST is faster and easier than the XE, but in all my extensive software collection I have yet to find a picture label program that works faster, easier, or better than this one. There are several programs that will print labels on the ST, but none are any more effective. Most require so much set-up that they aren't worth the trouble.

Looks like my XE isn't quite ready for complete retirement yet.

AtariWin all the way. Sometimes it crashes when changing models (800xl to 800 revision b, etc..), other than that's it'd DAMN awesome and I use it all the time.

Xformer can kiss off - I actually purchased the DOS version a number of years ago, and their customer support was downright rude (well, the individual I spoke with). I haven't seen the windows version of Xformer, but the DOS version was a mess in my opinion.

Does anyone know if any new 3.5 50pin SCSI drives can be used directly
with the ICD MIO?

Does the ICD MIO require any type of SCSI controller to drive 50pin
SCSI drives or does the MIO have the hardware built in?

If you post a reply, do e-mail me a copy as well.

Thanks for any info,
phantomm@eastky.net

> phantomm@eastky.net

I don't know if any of the newer SCSI drives will work with the MIO.
The MIO can only handle 256-byte sectors, and all SCSI drives made today
(that I know of) can only handle 512-byte sectors and larger. (512 for
PC, 1024 for Mac) If you can get hold of an older Seagate, most of the
older ones can handle the smaller sector size. Barring that, you may
want to look for a Black Box interface. They can handle the 512-byte
sectors.

As far as connecting to the MIO, they will connect right up pin-for-pin
so all you need is a straight ribbon cable.

Hope this helps.

Steve, everybody.
There's a ANALOG project to put ANALOGs up on the internet
like Kevin Savetz's Antic project. (All Antic programs are available
now http://www.atarimagazines.com) I'm sure cyberroach would
be very happy to have someone help him with his ANALOG project.
http://www.cyberroach.com. Mostly htmlizing articles, I think.
Maybe write cyberroach and ask what he needs in the way of
scanning ANALOG articles/magazines. pdf probably isn't the way
he's doing it.

Actually the MIO does require a SCSI or SASI controller card unless one is
built in to the drive like some old Seagates.

Can't say about the newer drives, but the MIO manual lists a dozen or so specific SASI & SCSI controller cards for use between the MIO and the hard drives.

I got mine from a discount store for $199, GEMCO I think. Mine has the same record for performance. The only thing that ever broke on it was the control cover when it was bouncing around in the back of a pick up.<grin>

There are other monitors that are just about as desirable. The Magnavox Color 80<vs Color 40> is very good as well as several other Commadore monitors that allow for multiple inputs i.e. CGA, RGB. Hard to beat the 1702's sound though, I don't think I have heard anything better outside of hooking a separate amp and speaker up to the audio.

Does anyone know if we can get permission from the publisher to
reprint (meaning scan) the pages with the software listings? I've got
a ton of Analog mags that I won't part with, but I'd be willing to
scan the relevant pages into .pdf format. I don't even begin to know
who to ask.

Well,
I have first seen this format by a demo group called Madteam. they also
created a HIP + RIP viewer. Afaik HIP is gr. 9 + gr. 9 interlaced
(receiving up to 32 greys with higher resolution); RIP is gr. 9 + gr. 10
interlaced (receiving up to 16x9 colors/shades with higher resolution).
Sorry, the rest is completely unknown to me... -Andreas

P.S.: RIP first appeared in MadTeams Igor-Demo... I have a viewer but
no pics yet... mail me - if you wanna have it !!

Rick,
Good idea... I didn't think of that. I'll throw together a quick patch over the break. Although I probably won't do in BASIC... its just not that much fun to me anymore. I may do it in Action!, but more likely in cc65 (www.cc65.org)... which is currently my fav for just ripping out something quick (and it looks like the file i/o library routines arrived just in time!).
-Dan

P.S. To all interested in this thread... I did find the source of the memory clobbering last night and fixed up the code right. It was actually a buffer overflow for the data read from the Atari side, which is why it only shows up on large files in the Atari->IBM direction. Now, I'm working on the date corruption problem... again, only from Atari->IBM, and also the occasional "Disk Error #144" or "can't read directory" problem going in the IBM->Atari direction.

Hi,

Quite a few months back someone asked about Diamond GOS disks and
sent me a box of 5.25" diskettes to copy the programs onto since Alan
Reeve gave permission. However I have looking for that box of disks
and have misplaced them, I think the guys name with Kevin or Keith
(sorry, I'm bad with names sometimes)

If that person would please get in touch with me so I may send him
the disks I owe him, I would appreciate it, Happy Holidays everyone....

Curt

The ANALOG magazines allowed for BBS distribution of their programs. The
only restiction I can remember off hand was you couldn't do it until one
month after the magazine was published. The language was a little vague,
sounded like you weren't supposed to have it up after another month which
doesn't make a lot of sense.

I posted the exact text to the newsgroup, typed in from a copy of ANALOG, no
one took exception to it.

In my opinion XFormer is at the bottom of the list. For DOS based emulators both XL-it and A800dos are by far much better (sound support and compatibility). In the Win95/98/NT world it's Atari800Win and the same port works great on a Macintosh but needs a lot of CPU power to run smooth. I would say that using Atari800Win is almost as good as playing my 130xe.

Dominik

Date: 2000-12-23 01:18:25 UTC
From: rjespino@yahoo.com
Message-ID: <920ugv$73r$1@nnrp1.deja.com>
Source record: 39913

The latest version of a8jdpeg, the jpeg viewer for the Atari 8-bit is now
available, at: http://www.geocities.com/rjespino/atari.html

a8jdpeg is an Atari 8-bit port of the C=64's juddpeg, written by Stephen L.
Judd..

The list of changes from the previous version includes:
The flicker modes are a lot less flickery
Default drive identifier "D:" is automatically added to file names
A ".JPG" extension is now added to file names if not typed in
A disk (sub)directory can be displayed within a8jdpeg
Several bug fixes
Options to save images in Micropainter (62 sector) format
Further improvement to the user interface

The source code and a screenshot is also available.
Merry Christmas and Happy New Year to all.

Actually, XformerWin is quite good. It has better sound now with the Pokey emulation. It's main advantage I find is being able run exe's directly as a "pseudo" drive instead of trying to find full ATR's for everything. I think they're both great but find myself using Xformer2000 more.

P.S. Just my opinion but I think we're quite fortunate to have 2 free awesome emualtors. I think we look at features & expect constant "free" upgrades without thanking these people for all their hard work. (mabe $$ not needed but sending personal thanks is great) I think that's why sometimes these people get cynical.

...I just love the Windows version of APE. That way I don't worry about compatibility & get to run all my progs with using 56k modems & printers. I think it's a much better alternative than expecting emualtion to be perfect.

Just my 2 cents.

7799. Rediscovering the Atari 8-bit - questions

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-23 03:26:27 UTC
From: av999@freenet.carleton.ca
Message-ID: <3A441B63.47125BFB@freenet.carleton.ca>
Source record: 39917
Body handling: Binary attachment payload not displayed: av999.vcf

For years, I was an Atari 8-bit user, owning an Atari 130XE (which eventually died) and Atari XE game system (which I eventually sold). Earlier this year, I acquired a new XEGS and an Atari emulator in the form of Atari 800win2.7. Needless to say, I'm delighted to be reventuring into the world of Atari 8-bits and am loving playing the old classics again.

Just a couple of questions: first, i've completely forgotten how to use DOS 2.5. Is there a place on the net where I can get the instructions again? Second, are there any sites where I can download ATR files of programs that I loved. Specifically, I'm looking for stuff like Rambrandt, Atariwriter+ and Colorview. Also, it would be great to find some demos.

Finally, I heard some time ago that Reeve Software has turned Diamond GOS over to the public domain. Is there any place I can download a copy of version 3.0 and its apps? I've always wanted to try this out and would love to fire it up on the emulator.

Please let me know by private email

Thanks,

Mark

7800. Vintage Computer Festival East pre-announcement

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-23 04:42:58 UTC
From: rbernardo <rbernardo@value.net>
Message-ID: <921agi$p48$5@news.value.net>
Source record: 39918

For Atari fans and fans of other vintage computer platforms, below is
Sellam "Sam" Ismail's pre-announcement of the Vintage Computer Festival
East (East Coast of the United States).
-
At VCF 4.0 on Sept. 30-Oct.1 in San Jose, California, Curt Vendel of the
Atari Historical Society won a major prize for his amazing Atari exhibit.
-
Give the VCF website a ring and state your preferences for Atari at VCF
East.
-
Truly,
Robert Bernardo
-

-
Date: Tue, 19 Dec 2000 00:49:45 -0800
From: Vintage Computer Festival <vcf@siconic.com>
To: rbernardo@value.net
-
Subject: Help Us Plan VCF East
-
Greetings Vintage Computer Enthusiast!
-
I am happy to announce that the VCF is moving ahead with plans for an
event on the East Coast of the United States. We are considering
hosting the event somewhere in the New England area, with Boston being
heavily favored both for its central location and historical relevance
to computing.
-
But we want to be sure to hold the event in a locale that will be
amenable to the highest number of potential attendees, so we are polling
our mailing list subscribers to determine where the most ideal location
would be.
-
In deciding on a locale, we'd like to keep these criteria in mind:
-
1) Availability of an affordable location suitable for the Festival
2) Geographical proximity to the most number of potential attendees
3) Proximity to major airports
4) Availability of decent and affordable accomodations
5) Weather
6) Historical relevance (i.e. near Route 128 near Boston, as a parallel
to doing the main Festival in the Silicon Valley)
-

So if those who are entertaining the notion of going to a VCF East could mosey on over to the following URL and fill in the survey we'd be most appreciative:
-
http://www.vintage.org/survey.html
-
Your input will help to decide where we will host the first VCF East. The event is tentatively scheduled to fall somewhere in between VCF Europa (April 28-29, 2001) and VCF 5.0 (Fall 2001).
-
Thanks very much for your participation in our poll, and we hope to see you at one of the upcoming Vintage Computer Festival events!

There was an earlier version without the "II" in the name. As I recall, the
later XL/XE version was also marketed as Monkey Wrench II. <<

You are right. The original Monkey Wrench (800 only) did not have a cartridge
shell, IIRC.

It is great to have to free emus for my old time favorite computer, however, upon doing side by side comparisons with games.... the options, the sound, and most of all the compatibility in Atari 800Win is so superior to Xformer2000, it's not even in the same league. A800Win to me is the closest thing to using the real thing, while Xformer2000 is like emulating a broken Atari computer. :-)
Seriously - it's almost a joke how much better Atari800win is. I never liked Xformer DOS and now, with the use of Pokey, they still don't have the sound problems solved. Many game's sound effects are definitely off, not to mention, a good number of games with player-missile problems (Ms. Pac-man ghosts have no eyes, etc..etc..). I deleted Xformer 2000 after trying it for an hour tonight. I do like the switching modes via keyboard, but that's about it.
Now back to Atari800Win. This product I would actually pay for.
(just my 2 cents).

Don't know the answer to your question, but I wanted to give Emmanuel a
well-deserved plug. I just received his device this week, and it is a
true godsend. It allows me to plug in 2 classic Atari joysticks and use
them on my PC; being able to use classic Atari joysticks as opposed to
the typical PC gamepad makes all the difference in the world. It works
perfectly, and is a truly awesome little device. Anyone looking to pick
one up, I recommend the device without reservation. The $30 (US)
includes shipping, and is more than a fair price. I promise I am not
affiliated with Emmanuel in any way, I'm just a very satisfied
"customer" showing my appreciation. :)

Hi, I need to build an SIO2PC cable. I need to use about 50' of cable to
connect
my PC to the 8Bit setup. I have an older Laptop sitting around with a 9 pin
serial
port in the back. Im assuming this setup would work with the laptop just as
with
a desktop system?

Anybody have any experince with this setup??

Thanks

The first demo I ever saw of SIO2PC was done by Bob Wooley at a SLCC meeting on a laptop. I also ran one off an old Toshiba 1000 laptop, ~8088 with only a floppy, LCD screen, ran like a top.

7808. runing .BAS file using Atari 800 emulator? (Xformer or AtariWin

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-23 21:43:08 UTC
From: meganurd@hotmail.com
Message-ID: <3a451ab3.3178136@news>
Source record: 39926

Does anyone know how I can run Atari basic files (extension .BAS) on a atari 800 emulator (I'm trying both xformer 2000 and atariwin). I'm trying to play the type-in games from antic magazines that the good folks at atarimagazines.com have graciously put online (no I'm not a rep from their site). I know that I need to do something about putting the .BAS file into an Atari disk image, but I haven't the faintest idea where to find the software to do that.

It's been years since my family mothballed our Atari 800 and I've started to become all nostalgic for those old type-in games. Of course, not nostalgic enough to actually type those things in again (besides, we've long since thrown out our back issues, *sniff*)

Thanks to anyone who can help.

I use 'imageman.exe', a program for managing DOS 2/2.5/MyDOS type
disk images. You start with one of those DOS images and then
you can add or delete files from the same pc directory to the image.
I'm sure there are others. I fairly often then use SpartaDOS 3.3a
with the emulator to copy the files from image to image once you
have booted and are in the emulator.
I'm getting confused just saying this. Hope it is clear to you.
Where to get 'imageman.exe, or .com?' Probably can find it using
xlsearch. xlsearch is probably at www.newbreedsoftware.com

Yep, I use a toshiba 486 Laptop for all my SIO2PC stuff, very handy.
I had to do this originally, as my main PC has too many things hanging off
it now, and it's not setup in an easy place to keep swapping cables.

So yes a laptop would be fine! :-)

You must have an image file of a bootable DOS disk to 'boot' the emulator.
After that it is pretty much the same as using a real Atari;
LOAD"Dn:ANYFILE.BAS", n=1-8 or RUN"Dn:SOMEFILE.BAS. Most of the emulators allow
you to assign an individual A8 file on the PC to a Dn: designation so that it
could be read into memory and then saved to an image. This site has some
utilities to add or remove files to/from an A8 image.

From: Rick Cortese <ricortes@netmagic.net>
Message-ID: <t4cajmt04arj1c@corp.supernews.com>
Source record: 39938

Easy answer is the one you can get or the one you are willing to pay for.

The MAX232 are better technically, especially for long cable runs. They are also a bit tougher to build: My estimate from people asking in the newsgroup for help => as high as 70% of the people that tried to put them together couldn't get them working. Just the nature of Atari 8 bits, lots of hobbiest.

When Nick first did SIO2PC, the MAX232 chips were ~$6 per and weren't widely available. The 70% failure rate for getting it working was just the ones that could find a MAX232 chip.

Since then things have changed of course. MAX chips are everywhere and cheap, but they are still a bit tough for a first time breadboard project.

The 1489 design<s> were just to get something simple that works. This was after people said stuff in the newsgroup like "What's a 4049" or "Where can I find a 74LS00?". It seems to have worked out pretty well, Radio Shack sells them and they are available everywhere. There were several side effects, most people were chargin ~$40 to breadboard a MAX232, but the 1489 version<s> go for ~$25.

Basically, that is about it. If you need to operate the cable in a humid envirionment<galvonic problems, EMF> with a long cable run, you should use the MAX. If you are setting up in the same room in Arizona during the summer, a 1489 should work fine.

Mine sucks, I think it was done about 1990 and posted to the newsgroup. My son found it in my /public directory when he was fooling around learning how

to do web pages, so he stuck it up. Only bright side is it is in ASCII so you should be able to see it with a shell account and an Atari 8 bit. Clarence did a much better job.
> > capacitor is a -| |- or -| (- . I noticed Dyson's 14c89 diagram has
> > pin 13 tied low instead of Rick's tying high. And Dyson's has a 5.6k

I changed my mind after rereading the RS232 specs and looking at the equivalent circuit for the 1489. 13 to ground is completely unnecessary, there is already a passive pull up ressistor *on the 1489* input which makes this redundant. It doesn't have to be tied anywhere. I probably did the original tying high and tying low. In keeping with the "Fewest connections possible" goal, it should be taken out: Let 13 float.

> > resistor pin 14 to anode side of diode. I tried that resistor, it
didn't
> > help.

Honestly, I know this needs to be there with a Prosys cable, but I can't see why it would be needed on SIO2PC cable.

The reason is that in all likelyhood the Atari has pullups or pulldowns on the POKEY chip to prevent floating logic levels when booting with nothing attached. If people have problems that require a pullup or pulldown to get the cables to work, there is a good chance they have a POKEY or cabling problem. I have seen a couple of POKEY problems.
> > I did have one question. Somewhere I read the decoupling capacitor

> > with very long leads going there. Should I shorten the connection so
> > it is withing 1/4" of pin 14?

The cap was really just a suggestion, 1489 is an analog chip. If there is a problem that required a cap, it would manifest itself by the computer glitching due to spikes on the power supply with a SIO2PC cable plugged in. RS232 and SIO2PC cables don't care about voltage spikes, it is just they may cause them.

But then the diode<Nick's solution> was just a suggestion for people that wanted to plug in other Atari devices in the SIO chain. Everyone likes the diode, so I guess they can add the cap if it makes them feel better.<grin>

7822. Printer technical question

Date: 2000-12-25 01:02:53 UTC
From: rhamiiton5@aol.comedy.com
Message-ID: <20001224200253.12555.00001488@ng-fv1.aol.com>
Source record: 39940

How do the electronics work for the console switches on theAtari XDM121 Printer? The "On-Line" button selects the unit just fine, but the "Line Feed" button no longer advances the paper and it is uncertain if the "Top of Form" is functional. I was prepared to replace or wire around the LF switch with a momentary contact SPST and happened to put a VOM on it out of curiosity; here is the puzzlement.

All three switches have some continuity, about 2500 ohm, constantly and the "On-Line" button drops to near zero when pressed. The "line Feed" and "Top of Form" buttons show no change when pressed. What is happening here? Why isn't it a case of on and off? Shouldn't it be either totally open or totally connected?

-Ron

Inform everyone that communications have completely broken down.

7823. tari 800 setup for 2001

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-25 01:10:52 UTC

FamilyNet HQ: Telnet:\\www.family-bbs.net

Wow... here we are in 2001 practically. Weird seeing "Atari 800" and 2001 in the same sentence. But as we head on into a new year, I thought I would write a bit about my current computer setup to hopefully offer some inspiration to other Atari users out there.

First off, it is good to see that the computer I use in fun has a newsgroup of 200 messages in only a little over a week's time. I realized tonight that the feeling of the Atai computer is much the same now as it was back in the mid eighties. The feelings that, yes other computers receive more air time, but there are those that like my machine! That is a cool thought.

During the year 2000 I had an Atari 800 setup as the main computer and an Atari 1040 ST (4 meg of ram/ 16mhz adspeed chip) powering the hard drive thanks to the 800XLDJ program on the ST.
With a bit of slight of hand magic using two serial switch boxes, a PC laplink cable, and a SIO2PC cable, I was able to get get the Atari 800 with the ST to do the following...

1) Run Bobterm on the 800 and have the ST translate in 80 column ANSI graphics.
2) Run Bobterm on the 800 and have the ST with the Spectre Mac emulator translate with Z-Term. (Nice being able to type away on a Atari 800 while using the features of Z-Term in the Macintosh environment) :)
3) Have a null modem link between the 800 and ST.

Well, in truth, a lot of fun tricks are possible with the laplink and SIO2PC setup, and the 800XLDJ allows a few cute tricks of it's own. :) The ST allowed a few nice perks, like being able to play CD's to my computing. The only problem was, with my older ST there was not the ability to multitask so I could either run the 8 virtual (one meg) floppy drives for the Atari 800, or run the term program for the 80 column translation. (Because let's face it, the Atari8 has some good 80 column term programs, but none are as good as Freeze Dried term on a SC1224 screen.) (Grin)

For 2001 I have corrected this little dilema... I added another ST. :)

Yeh, I had a 520 ST with 1 meg upgrade not being used, and decided that it was better off being used. So runs the 80 column translation. Both the 520 ST and 800 remain on constantly (monitors turned off till used). This makes a GREAT advantage over a modern computer in that this machines do not have no form of drives constantly spinning. Wonderful!

When it is needed (like when I sit down to the computer and want to do little more than check my mail) the 1040ST with the 8 virtual drives are broght on line to add some real fun. With Bobterm I am able to send from the drives

short text files for E-mail address, signature files, and other writings. When I am playing a online BBS game, all the repitious moves are taken care of by a text file which I send.
I have one character in a game of LORD (Legend of the Red Dragon) which I continue to play just to see how strong I can make a character. I get to a certain point in the game and then send a file and it activates some 500 moves and I walk with 300,000,000 gold and call it a day. :) Really handy.

And of course you might be asking how do I check E-mail and this newsgroup... still with the help of the Family-Net BBS. Here in Dallas the dialup number is 972-496-0650. There is also a way to access through telnet and through a common web browser if interested.

I often telnet out of the Family-Net and hit off site Lynx browsers and visit E-Bay, the JYBOLAC chat on Thursday nights (http://stargate.cs.swau.edu/atari), and other fun reading.

Great desktop computer. Fun to play a good game, a AMS music file (love those!), sometimes tinker with programming.

And with those serial switch boxes, I can connect up my Newton 2000 (which take care of the field work and has about 80x more processor speed than my desktop...) ;) and download notes from a day at work. Not bad.

My serial connection? A 850 interface. Thanks to the good code of Bobterm (and Ice-T on occation) I am able to get 9600. I have heard a 19200K patch was made for the 850 interface, but I have yet to see it.

So there you have it. An actual decent and fun machine. Now if I can just find a good printer solution and a good ascii text editor that doesn't have to boot from startup and works in the 48K confids of the Atari 800. ;)

Merry Christmas and Happy New Year!

> happened?

The Phoenix project is a not a bad one, and just as we got a JPEG viewer
for the Atari8 in 2001, perhaps we'll get a PPP connection for the Atari8 in
the future. (Much like a modified C-64 or Apple][does.)

Truth is though, with a UNmodified Atari8, a SIO2PC cable, and the APE
interface software (and with a standard PC) you can get the Atari8 to access
the internet (lynx browser) through the PC. I access the internet through a
local telnet, but technically you could set your own PC up to be your telnet
gate at home.
I'm just lazy, but it is a future project of mine... perhaps when my local
BBS is no longer around. But nice to know it is out there all the same. ;)

> that I tried it or anything :)

> Were there ANY other right slot carts?

I've looked into this fairly extensively, and found there was a few fun
creatives uses for the Right hand slot on the Atari 800 (and what can I say? It
is my favorite Atari8 machine!) Here's what I have found out so far...

Monkey Wrench I
Monkey Wrench II - Basic utility and tool extension

Magic Dump I ?
Magic Dump II - Allowed you to "dump" screen contents to a printer.

Other things I have heard about....

80 Column cart - Somewhat flakey way of getting 80 column text.

There was a interesting pirate cartridge you could insert in the right
cartridge that would copy the contents of the cartridges slammed into the left
cartridge slot.

System Clock cartridge.

This is about all I can think of at the moment. The Atari 800 was great
in add ons that could be inserted in not only the right slot, but the ram/rom
slots in the back. A fun machine with lots of plug in parts!

If these are carbon-rubber contacts on mylar 'switches', what you
describe is a case of worn out carbon and you've found the problem.
Repair the carbon contact with a rubber contact repair kit from this
page. http://www.chemtronics.com/catalog/catalog.cgi?
action=list_products&category=7

Cut and paste the link into your browser if you have too.

Or you could do wire around.

You can use a modem on your Atari to dial directly to some ISPs,
depending on if they offer a command line logon. Some do and they
don't even know it.

When we were having the the Tuesday night chats on IRC this past
summer a great moment came when we had a participant log on to the
chat direct from his Atari using Ice-T. He said Ice-T's 80 text
columns were a little straining to the eyes, but he was getting by
with a TV set.

Probably heard this already, but write down the telephone number on the intro screen and then enter it when you first start up the game. From there you can select shift and then a number to change levels. A great way to get out of dying if you change levels quick enough. ;)

Let's do talk about Sparta. I understand there is a version 1.1 for the
Atari 400/800 line. What does this offer over MyDOS 4.5 ? (I won't be
picking up a XL or XE, so mainly a Atari 800 version of Sparta dos would be my
curiousity.)

I was bored today and was thinking (usually gets me in trouble) and realized I had a spare Atari 130xe case laying around and also a spare 1040stf case, both sitting doing nothing, then I looked over at my 1200xl and thought wow that would be cool to have an xe in an xe styled 1200xl sized case (read: internal room for expansion, yet look cool as hell) I'm starting to have Frankenstinian thoughts, and I'm just crazy enough (and skilled enough) to try it, shouldn't be too hard, it's just plastic, now where is my dremel.......
Just think, I could utilize the floppy opening on the side of the st case for future 3.5 floppy upgrade, by hacking off and narrowing just the grilled section of the st case and adding it to the xe keyboard section, hack out the back of the xe case to retain the xe ports and graft it to the lower st case (after narrowing it).....or maybe just keep the full width of the st case and find someone smart enough to make an st keyboard function on an 8 bit, but, to do that I would need the st's keyboard, hear me MacFalkner?;-)(to those who don't know, MacFalkner makes a PC keyboard adapter for the 8 bit he calls the AKI(great product I already utilize one in one of my 130xe's), but it won't work on an st keyboard) then I would just have to modify the backend of the st case to work with the xe mobo.So many decisions to make... Anywho, anyone else ever consider this? The case designs are so similar between the two anyway, it shouldn't be too complicated.

Hi everyone,
Don't forget Ebay. I was surfing there a couple of hours ago and found
three or four 1702's for auction.

Actually, forgetting DOS 2.5 is probably a good thing. If you want to
get back to a really good Atari8 DOS, go for MYDOS 4.53--it's free and
has a similar interface to Atari DOS 2.x. Now, if you want a superb
8-bit DOS, let's talk Sparta :)

That was really fascinating, its too bad they didn't have an 850 or P:R:
to hook up a printer and log the data in real-time. I've never found the
cassette interface to be terribly reliable, surely not for a
mission-critical heart monitor!

Is that "XC 12" tape drive an atari peripheral? Why have I never seen
one? Also what is "Turbo2000"?

I'll second that. I have had mine for a couple of years now and it's still going strong. Emmanuel does a great job putting them together. Like I have said many times before, nothing like a couple of Wico Red Ball Joysticks plugged into your pc. Not only does it work great with Atari emulators, you should try Mame with Robotron or Battlezone and two wico joysticks. Almost as good as owning the real thing, but that's a whole other newsgroup.

I have the original ICD releases of the various versions of Sparta 1.x
(because it can't use OS RAM, it has different versions for different
uses eg. maximum free RAM for games etc. with fewer DOS features).

I've never bothered using it as I've never had an 800 and have never
seen a better DOS than 3.3b. On the rare occasions I might have wanted
to use Turbo BASIC, I simply used XL2 to run a second system under MyDOS.

As to advantages: the biggest is batch files followed closely by the
more efficient DOS format (directory structure, directory size limits,
etc.). Also, if you've used MS-DOS, you're right at home with it in about
10 minutes

If you'd like to try the best CLI-type DOS for an 800, I'd recommend
Jiri Bernasek's BW-DOS (often referred to as "BEWE DOS"). It's 100%
Sparta 3.x compatible but is designed to use minimum RAM (more external
functions) and does not use OS RAM. It offers a similar CLI, batch files,
etc. and has some great extra utilities, many of which perform well under
true Sparta. Its only drawback, from my point of view, was that it was
restricted to D1:-D4: plus D8:

The Atari BASIC Source Book is available for downloading at-

http://www.ping.be/kim-1__6502/

ftp://ftp.spudster.org/pub/Atari/CTH/Programming/Assembly/AtariBasicSourceBook.zip

Now that the source code listing is available in an electronic format, just think of the interesting projects that someone could do with it. Like maybe use expanded memory for variables and additional BASIC functions? Granted, Turbo Basic and BasicXE are excellent versions of BASIC for the A8. But there hasn't been a new version of them in many years, and probably never will be. This could be a new project that would give A8 users something new to play with. Any takers?

Try the UMich archives or Tom Hunt's site before you start asking for
emails.

> I have always wanted to try a command line DOS on my 800.

You can use Sparta 1.x, DOSXL 2.3, or BW-DOS (the author's name for it) on
an 800. You can even use SpartaDOS-X if you can find someone willing
to part with the cartridge.

> I guess my ideal DOS would be a CLI DOS with 80 columns and good
> compatibility.

If you want a good CLI DOS which supports 80 columns, then I'd
suggest either MS-DOS 6.22 or DR-DOS 7.03 and the purchase of an
Intel-compatible computer--80 column text mode sucks on the Atari8 except
with an XEP-80 which, in turn, sucks because it runs off a joystick
port. I believe the best compromise made between readability on old
monitors and screen width was done on the TRS-80 with its 64 column
screen, then again, a computer on which graphics were a joke.

The floptical drive was a special SCSI drive that could use these 21MB disks. The Disk was a hybrid, it used magnetic encoding but the tracks had lasered alignment groves to allow precision head alignment. As a side benefit it could also read standard 3/5 disks, both 720k and 1.44mb as well as 2.88mb disks. The 21mb disks look just like plain old floppys. They used to cost $5 each. Now they are worth maybe 50 cents ea.

I'm the un-proud owner of two such drives. Paid $200 each for them NEW. Oh, well, maybe collector's items one day, I'll have to store them with my $5000 Phillips CD521 1X first generation CD Recorder. Yea, I was making CD's back when most of you were backing up your 105mb hard drives on 1.44mb floppys. Back when blank 650's cost $25 EACH!!!

I beat you on the LS120, got 3 of them at the flea market for $5 each and 25 disks for $1 each.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

7867. Atari to PC Joystick Interface!

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-27 16:48:13 UTC
From: Emmanuel Fernandes <fernandes@NOSPAMagel.ucl.ac.be>
Message-ID: <92d67t$c8f$1@ail.sri.ucl.ac.be>
Source record: 40036

Hi Everybody!

I see Mike Kohary is enjoying the device as I did many years ago when I designed it and build it for me. I just wanted to say that the device which can be taken from the page http://users.swing.be/atari/joystick.html is getting old.... In a few days I will update the page with a new version of the device with the following characteristics:

- less electronics, a much simpler design,
- support for classic Atari joystick, the 2-buttons Atari 7800 stick and the Sega Mega Drive Joypad.

The support of a 2-button stick and the Sega Mega drive controller lets you play all that games on emulators which needs 2 buttons, like many games with the MAME emulator, etc...

So keep checking the page if you are interested...

Though it's still a work in progress, Atariland
is now open for new sign-ups! This free service
is provided for Atari enthusiasts, by Atari
enthusiasts!

There are a number of places where you can go
online to download Atari games and communicate
with other Atari freaks, but Atariland is a
little different. We're a non-profit group that
offers a host of free and valuable web services
in addition to our large library of Atari
downloads!

We encourage everyone to sign-up today for a free
account. And please, pardon our dust... we're
still working! :)

Go to http://www.atariland.com today!

7870. Help < Please ? >

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-27 21:40:12 UTC
From: Barry Ruck <bruck@peterswoodharlow.freeserve.co.uk>
Message-ID: <fwlmRBA8GmS6Ewh7@peterswoodharlow.freeserve.co.uk>
Source record: 40038

Long, long ago I presented my father with a 65XE, XF551 Disk Drive and 1029 Printer. Yesterday he found them again < Oh dear ! >

Son, (He says) you know all about computers < serves me right >, can I transfer my old Atari files to my PC?

Having brought all the aforementioned kit back from Lincolnshire, I logged on and found this newsgroup.

So, now I've read the FAQ, < and now having a headache! > I conclude that there are two ways of transferring the data (Mini Office .dat files) to a PC. Either a serial link or an emulator that will allow my old 5.25 PC Drive to read the Atari discs.

My question is, can someone who has done this, recommend one method over the other. I would prefer the latter, as the 65XE keeps telling me that there's " Insufficient Memory " to display some of the documents, so they may prove difficult.

Regards,

Barry Ruck. Harlow, Essex.

For your situation with a DD XF551, a 5.25 PC and a one-time transfer - the easiest, quickest and least expensive is Atari Link from HiasSoft. It is SW allowing the PC to move files from an A8 DD disk to the HD.

It is file oriented, so a complete diskette transfer involves converting the disk to an image file similar to modem transfer methods. DisComm is good for this. Copy protected media is the one fly in this scheme.

>go. I would like to know how this goes.
>

Ah, but you mis-understand me, I dodn't want to make a 1200xl look like an XE, I wanted to increase the size of an XE case to create an XE version of a 1200xl case (as 1200xl is to the 800xl, mine would be deeper than a 130XE) and still maintain the internals of the 130xe. I have the thing almost done, I was going to upload pics of what I have so far to my web space on aol and post a link to them on here, but their server is down or something, won't let me upload, so if anyone wants to see the pics of it to this point, I can email them to you, 3 pics total. (all 3 together total just over 600kb)
Actually this project is coming along very nicely, I even have the ST's full height DSDD 3.5" floppy mounted in the 'Franken XE' (non-functioning ofcourse, I have no controller board for it...yet ;-), it sits perfectly over the controller ports, I still have to figure out how I'm going to piece the lower shell back together after I had cut and extended it, the upper shell is already done just some fine finishing to do to it cosmetically then it will get painted with the right shade of grey automotive interior paint(durable stuff, made for plastic trim pieces in cars and trucks) and hopefully it will look factory when I am done.

I need to set up the convergence on my large screen TV. A convergence generator is quite expensive but I have an Atari 400 and a basic cartridge. I figure I can put together a basic program to do this. Unfortunately I don't have the basic manual and I forget how to access the video modes and line draw commands. Can some one help? I need to be able to produce the three colors, red, blue and green as horizontal and vertical lines as well as whole backgrounds or the same colors. Any help would be appreciated.

Thanks in advance.

Look for "Your Atari Computer" by Lon Poole et al. It's often been referred to as "The Purple Book" because of its cover. Also, there have been several TV/monitor setup programs published which will give you what you want (A.N.A.L.O.G. I think had a really comprehensive one). These should be available on the UMich archive.

Finally, if you're going to play around in the back side of an operating TV/monitor, remember the "One hand" rule.

I assume by "it" you're referring to SpartaDOS. It's an acquired taste
much like coffee or beer; once you get hooked on it, you realize how much
more you can do with it than you could with MyDOS.

I'm not knocking MyDOS, it has its uses, and for people uncomfortable with
a CLI DOS it's probably the best option--anything other than DOS 2.5 has
to be an improvement.

Season's greetings Young Lady.

Thanks for the file, unfortunately, I can't get it to read the XE disks
- I get a read error every time. Also, if I format the disk using the
Atari Link software, I get an Error 144 on the XE

Any Ideas ?

Regards,

Barry Ruck. Harlow, Essex.

Thanks John. The UMich is the University of Michigan?

I am a fully trained and qualified electronic technologist so I also understand the high voltage risks on the back of the TV. But thanks for the warning anyway you never know. Also the convergence board is on the front of the TV. The back doesn't need to come off.

How do I find the archive at UMich?

Sounds like an alignment problem on one of the drives, most likely; assuming
each is actually writing and able to read its own disks.

-Ron

Inform everyone that communications have completely broken down.

It must be a problem with the Atari drive, as I get it with both a 360Kb
and 1.2Gb PC drives. I am wondering if there was a problem with the
XF551. When I first purchased it, I was told that there would be an
upgrade supplied later. As the kit went to my father, and he would have
got me to fit any upgrade, I don't think this was done. The prom inside
the drive states Rev. 7.7 (I seem to recall that this was to be
supplied with a higher revision for optimum capacity). The original DOS
2.5 and MINI OFFICE disks seem to load OK.

I think that I may well just print it all out and re type it !

Anyone in the UK interested in a 65XE plus assorted bits and pieces ? It
will be available soon !

Regards,

Barry Ruck. Harlow, Essex.

The XF551 was always capable of reading/writing double-density and also double-sided, but NOT under Atari DOS 2.5. That DOS only understands single density and Atari's own enhanced density. That's why the PC drive can't read the Atari disks. (And why the Atari gives you error 144 when you try to use a DD disk with Atari DOS 2.5.) The Atari files must be copied to DD disks. Use MYDOS 4.5x to do this. But it will be very tedious with only one drive. Use of Atari's RAMdrive would help. The promised upgrade was not hardware, but DOS XE which reads all three densities. You'll like MYDOS much better, however.

I have the following Atari 5200 cartridges for sale or trade. Cartridge orders of $60 or more receive free shipping within continental North America. All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (Atari Comics), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please use this link to contact me jim_l@NO.SPAM.telusplanet.net?subject=Classics.Atari.5200 (removing the NO.SPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari/TI 99/4A), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

This list covers the following Atari categories:
- Shrink-wrapped/New Games
- Atari Force Comics

** Atari 5200 Cartridge Titles - New/Shrink-wrapped**
==========
Shrink-wrapped cartridge orders of $60 or more receive free shipping within continental North America.
- Ballblazer by Atari/Lucasfilm $20
- Pitfall by Activision $15
- Rescue on Fractalus by Atari/Lucasfilm $25
- River Raid by Activision $10
- Space Shuttle by Activision $12
- Zone Ranger by Activision $10

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...

- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

The "One hand" rule is, essentially, "Keep one hand in your pocket".
That way, it's almost impossible to complete a circuit through your
body while you're messing around in an area with 20-30 kilovolts.

Not a bad idea. Sounds like the basic rule is to prevent a circuit
happening by putting one hand in a non-conductive place and not in any way
touching the other hand.

Of course wouldn't nonconductive gloves accomplish the same thing?

>this. But it will be very tedious with only one drive. Use of Atari's RAMdrive
>would
>help. The promised upgrade was not hardware, but DOS XE which reads all three
>densities. You'll like MYDOS much better, however.

So it sound like what I need is either an Atari 5.25" disk with DOS XE
or MYDOS ?

Is there anyone in the UK can mail me a copy ? I have plenty of blank
5.25 disks.

Ironically, I have got MYDOS to work on my emulator, I just can't get it
onto a floppy that the XF551 can read < Grrrr >

Regards,

Barry Ruck. Harlow, Essex.

From: Manuel Polik <cybergoth@nexgo.de>
Message-ID: <3A4CD744.A3DD116B@nexgo.de>
Source record: 39871

Hi there!

Crush, Crumble & Chomp will be the next game featured in the Epyx Shrine
(http://home.nexgo.de/cybergoth)

Does someone know, where to find an Atari 800 'Crush, Crumble & Chomp'
manual on the net or can someone scan and/or type it in?

New: Since I'm progressing so slow, I now offer some Epyx Games for
adoption. If you're interested, read all about that on the page.

Greetings,
->Cyber<-

7904. Reading SpartaDOS or other Atari8 Archives on PC?

Please forgive this question, I'm sure you've all heard it a thousand times....

I'm trying to play Ultima II and the #$^%& thing keeps asking me for the player disk. I thell the emulator to use the player disk in D1 and it still just sits there. Anyone know what I'm supposed to do?

Please copy my e-mail adress - gdewar@pipeline.com with your reply...

7906. cheating at atari games on pc emulators

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-29 19:16:39 UTC
From: carmel_andrews@my-deja.com
Message-ID: <92inujqag1@nnrp1.deja.com>
Source record: 39875

Hello Atarifreaks, hows the atari going, keep the faith and keep the atari hummy

Anyway is there anyone out there in atari-cyberspace that is interested in cheating on the atari games thru emulators (like a800win, handy etc etc...) then read on

Recently I downloaded a couple of utilities from the internet, they are called game trainers, similar to pro action replay on the megadrive/snes etc

the best one i've used at the moment is game wiz 32 which allows you to find addresses for lives, energy etc etc, not just on pc games but also the games running thru emulators

Their is only one problem with this programme, if you are using it thru 8bit emulators thru win 9x, it disables the save feature for some reason, however it doesnt stop you manually writing down the addresses for the games and then, when your not using the emulator go load up game wiz, even though you havent got any addresses, press or select the add button, type in the addresses and the label (what the cheat does) and continue the process untill you have entered all the cheats for that game (do not insert the variable/value) select save, delete the prog manager entry, type in name of emulator followed by hyphen and the name of program, it will save, now all you do is reload the emulator and the game you found cheats for, pause the emulator or get back into windows, go to game wiz, select program select, select of the emulator you have chosen, and press ok, go to the load icon and select the file of the game you wish to cheat on, if you have selected freeze value, unfreeze it, go back to the emulator play the game for 2 secs. pause it and the emu go back to game wiz and select the entries , youll now notice that values have now been assigned freeze the values or enter new ones and freeze new values and go back to your game and you will now have the cheats installed, beware though that when you reinitialize the game it might store the location for lives energy etc in a different location, this is true of some lynx games i've being playing... I am currently looking at a few other game trainers

Getting back to you soon

Happy Atari'ng

I need Pastfinder and Boulderdash original Atari 8-bit carts to complete my collection. I will either pay $35 a piece for them if they are in nice condition, or I will trade an Atari 2600 Rubik's Cube cartridge and an Atari 2600 Pengo cart with manual for the two of them. If anyone has them and can work out one of these deals with me let me know. Thanks. -Satcom2

7908. Scott Adams text adventures with graphics

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-30 00:15:57 UTC

Message-ID: <1P936.146686$4K4.24849440@typhoon.southeast.rr.com>
Source record: 39878

Anyone remember these? They were the graphical versions of the Scott Adams text adventures. I know some (all?) of the original 12 were rereleased with graphics (Adventureland, Pirate Adventure) and a couple of the later games (Hulk, Spiderman) I've played them on the Apple II platform, so I know they exist.

My questions are:

1) Were any released for the Atari 8 bit? If so, how many?

2) Anyone know where one might find the disk images?

Falcon

It just so happens that I have the box, manuals, as well as key-cards
(one for each monster), I don't have a lot of free time though. So
sometime over the next week I'll do some scans and throw up a home page
with everything pertinent. This was a great game even by todays
standards. I'll be sure to post when it's finished.

I don't know that I can find my original UII or III right now, but IIRC the
game world map was stored on the flippy side of the disk. You had to make a
non write protected copy of the back side to use it. So, I am betting that
you need two disk images for UII, side one and two.

I update my catalogs once a week. Just before this message is posted.
So when you see a new posting, check my Catalogs. After I post this
message. I'm off for the weekend. But I'll be back after the weekend.

e-mail: atari@benjamin.net

Greetings! You're invited to my WebSite. Make yourself welcome! I've
been hard at work, Adding New Pages improving my WebSite while trying
to yield to the K.I.S.S. method. Or (K)eep (I)t (S)imple (S)tupid. As
my Boss and Teacher, "The Shadow" taught me. Currently I'm behind on
adding new inventory to my Catalogs. I have been and will be acquiring
more Atari inventory. 64 Bit Atari Jaguar Game Machines, Classic Atari
8 Bit & Atari ST Computers. HardWare, SoftWare/Games, Books/References
and Accessories. And I Ship anywhere the Law and Customs allow.

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari
64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories!
View Atari Catalogs on the Web at http://www.atari.benjamin.net & Jump
to my FTP site linked to my WebSite so you can Download Free Catalogs
or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's not an inconvenience. I do ask that you specify
Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you
by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can
attach text files to your E-Mail. Catalogs are just regular ASCII text
files so you can download them into your text editor & view them, edit
them or print them out! It would make things easier for me if you take
my Catalogs, load them into your text editor, delete what you don't
want and E-Mail me the rest! To expedite things, include your complete
Mailing address so I can figure your Shipping/Postage & Handling. I'll
be back after the weekend.

Consider it done (sometime next week), I guess I'll put together a
little website 'cause I've actually got several Epyx titles as well as
some Avalon Hill and a couple of Microprose. It would be an original
idea since I haven't seen many sites with artwork and literature for
the Atari 8bit's. Give me a few days since I'll be working 'till
tuesday (hmmm voices carry).

Don't be too hasty; there are at least 3 options here:
Take your data diskettes to another A8 person with SIO2PC/APE or other hardware
to make the transfer.

Obtain a copy of a DD DOS such as SmartDOS, TopDOS or MyDOS for making the
transfer on your equipment.

And lastly, do some creative Basic programming to allow your drive to write
your data on a DD disk. It all depends on which and how much typing you would
rather do. Here's how it could be done:
Boot to BASIC with DOS 2.5 SD
Load the transfer program
Read your data file into a string variable
Set the XF551 percom data block to DD
Write the string data to disk with SIO
Transfer to the PC with AtariLink
Reboot SD and repeat for another file

Our Basic routine must manually create a file structure on the DD disk; we skip
the VTOC stuff and use sectors 4 up to about 100 and then do one directory
entry. We limit to one file at a time to avoid the file number bit mangling as
the first file is always number zero. We do it all with lot of POKEs and a few
USR calls. However, it will only work well if the data files are mostly text
and smaller than about 25K bytes (200 SD sectors).

Hi Jim,

I've tried sending you an email from home as well as a few different
machines at work and I always get the same message...

This Message was undeliverable due to the following reason:

Each of the following recipients was rejected by a remote mail server.
The reasons given by the server are included to help you determine why
each recipient was rejected.

Recipient: <yushi@internet.look.ca>
Reason: <yushi@internet.look.ca>... User unknown

You mentioned that you send it again, I take it that means your original
message? The message got through the first time, but not a second, so you
service provider might be having some problems.

Regards,
Jim

From what Carolyn said, it would seem as all I need is a dos (DOS XE or
MyDos or similar) which will allow the 551 to do it's stuff. The
problem is getting it on an Atari disk in the first place!

I have even managed to get MyDos to run on my emulator, but can't work
out how to get it onto an Atari disk.

I also don't seem to be getting any replies from the UK, just the
States. If I could find someone in the UK with a decent Dos, I could put
up with the boredom of copying the files from my existing disks to the
DD ones, and then use the Ataridsk software that you sent me to read
them into the PC.

I just wish that I'd chased this up years ago, when XE should have been
supplied.

As Jim said, very ungainly; take a look at the gloves worn by electric company employees when they go up a pole. As to putting one hand in a non-conductive place: it's too easy to move it without thinking--if it's in your pocket, you'll think twice about pulling it out as that's not a normal working posture.

Monitors and TV's are really dangerous, even for quite a while after the power's switched off as the capacitors hold a large charge for a long time. If you insist on working on one, wear rubber-soled shoes and do stick to the "One hand" rule--human sparkplugs are not much use.

Hi, Im getting ready to build my Interface. I was wondering what
software is better? Sio2PC or APE?

Im looking to do file transfers mainly. I may also use the PC to boot
the atari with.

I was just wondering what has its strenghs and weakness.

Thanks,

R Stag

For file transfers I use Dos Mode Sio2PC. Sio2pc has great tolerance for having a weird sio cable chain, 2 to 6 peripheral causes no problems with my equipment configuration.

> I was just wondering what has its strenghs and weakness.

For games, basic, or programming I use Windows Mode APE98. APE doesn't like other Atari drives online with my equipment configuration.

- Last Updated 12/30/00
- New Magazines Added

I have the following Atari Manuals, Books, Magazines and Comics (which are all in good to mint condition) which I am looking to sell or trade. If you have any questions in regards to style. language, or cover art, etc., please feel free to ask. I am open to reasonable offers, please make all offers in U.S. Funds (buyer pays shipping). I am also willing to trade for certain items, please see my list at the end of this post.

8-Bit Books Please make an offer
==========
- Compute's "The Atari Basic Source Book"
- Atari Basic Reference Manual

ST/TT Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

ST/TT Manuals/Tech Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)

- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

North American All Platform Magazines Please make an offer
==========
- Compute - January 1985 Issue 56

North American Atari Magazines Please make an offer
==========
- Analog Computing - December 1984 Issue 25
- Analog Computing - February 1985 Issue 27
- Antic - February 1985 Issue 10

Atari Force Comics
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Atari 2600 Game Manuals Please make an offer
==========
- Artillery Dual by XONOX - Full color French (Canadian) variation 1983 (rare)
- Asteroids - Full color 5 language variation 1979
- Atari Game Catalog (49 Games) Full Color English variation 1982 -Breakout - Full color 5 language variation 1978
- Centipede - Full color 5 language variation 1982
- Chuck Norris Superkicks by XONOX - Full color French (Canadian) variation 1983 (rare)
- Combat - Full color 5 language variation 1978
- E.T. - Full color 5 language variation 1982
- Jungle Hunt - Full color English variation 1983
- Kangaroo - Full color 5 language variation 1983
- Maze Craze - Full color English variation 1978
- Missile Command - Full color 5 language variation 1980
- Mouse Trap by Coleco - 3 color English/French (Canadian) variation 1982 -Night Driver - Full color English variation 1980
- Outlaw - Full color English/French (Canadian) variation 1978
- Outlaw - Full color English variation 1978
- Pole Position - Full color 5 language variation 1983
- Popeye by Parker Bros. - 3 color English variation 1983
- RealSports Baseball - Full color 5 language variation 1982

- Star Raiders - Full color English variation 1982
- Street Racer - Full color 5 language variation 1978
- Yars' Revenge - Full color 5 language variation 1981
- Yars' Revenge - Full color English variation 1982

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

If you are interested in any of these items, please respond to me by using this link jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.Books (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

There is talk of a utility to convert cassette software to .wav files for loading into an emulator; and that's more than I know about it.

I have used some conversion programs which make boot disks from boot tapes unless it is a multi-boot like Zaxxon. Some tapes can also be converted to binary load files and SAVEd Basic tapes go directly to disk easily. Most disks make .atr's in a flash; both SIO2PC and APE have an additional cable that even converts many copy-protected disks to images.

> How do you read the spartados time from basic?

There's no normal way (see below) around machine language as there is no XIO for your purpose. There is a jump table in Sparta for the sort of things you want to do but it's located under the OS and this is further complicated by the fact that some of the processing code is under the OS while the rest is in low DOS RAM.

One way you could hack it from BASIC would be to create a short temporary file in the RAMdisk, read its directory information into a string, and then erase the file. This wouldn't give you the accuracy and speed of a ML routine but it would work. Even faster, might be to create/dir/remove a directory instead of a file. All of this can be done from BASIC using standard keywords and XIO commands, though I wouldn't qualify it as anything approaching a true way to read time and date.

This is an easy one, just plug an old tape deck into the line in jack
on your pc's audio (from the tapes earphone of course). Use windows
sound recorder to record the tape in real time as it plays. save the
wav file and find a program called wav2cas.exe to go the other way use
the program called cas2wav.exe, I think I got them at the win800 atari
emulator site or they came with the emulator.

The SAGA games I've played on the Atari had a really bad flicker to the graphics that made it difficult to concentrate on the game. You were supposed to be able to tune your monitor to where the flicker went away, but I could never get rid of it, so I stuck with the text-only versions.

You might want to just e-mail Scott and ask him about them. He's real good at responding to fan mail.

BTW: Scott has released a new game, Return to Pirate's Island 2, that he's offering for $19.95 US on his site. Sounds like a lot of people are enjoying it.

7947. Help for Atari (sort of) newbie

Newsgroup: comp.sys.atari.8bit
Date: 2000-12-31 17:16:42 UTC
From: Darren Fricker <darren@pclose.freeserve.co.uk>
Message-ID: <92npmomgn1@news5.svr.pol.co.uk>
Source record: 39814

I had a 2nd hand 800XL years ago for a very short time before I fried it by plugging in the wrong power supply (from a C64 disk drive) so my memory of commands etc is extremely patchy.

I've got hold of Xformer & a few disk images but cannot for the life of me work out or remember how to load any of the things. I can get the DOS menu & assign an image to another drive (eg, D2) but can't get past there.

Any help (ie, a step by step idiots guide) would be greatly appreciated as I want to wallow in 8 bits for a while.

Cheers.

Darren.

>
> I was just wondering what has its strenghs and weakness.

For me it was mostly about the system I am running the software on.

On an old laptop with only a 1.4 meg drive, SIO2PC works well since it is small and integrates well in that envirionment.

On a larger system with giga byte HD and a lot of files, APE has an easy to use interface for selecting disk images so file managment is less of a hassle.

Somewhere in between would be a toss up. For example, if you just want to use SIO2PC on an old 286 with 40 meg hard drive for 5-10 disk images it would be about as close as you can get to a tie.

It is also a tie if you are using application or programming software on the Atari. I have a tendancy to use either Sparta or MyDOS with a decent sized image, so the file handling or swapping drives doesn't really present a problem.

Source record: 39823

You need the 'Z:' handler.
After the Z: handler is installed, you can get the time by opening
an iocb channel (CLOSE #1:OPEN #1,4,0,"Z:")
Then get the time with XIO 33,#1,0,0,"Z:":GET #1,HOUR:
GET #1,MINUTE:GET #1,SECOND.
Then CLOSE #1.
To get the Date, you do the same except use XIO 35,#1,0,0,"Z:"
GET #1,DAY:GET #1,MONTH:GET #1,YEAR. (iocb #1 must
be open for READ, as for the time. Close #1 when you're done.
Where to find the 'Z:' handler? It should be somewhere with
SpartaDOS (duh). Lemme see. I have it. Maybe ftp.spudster.com
or ftp.atari8.com (if I remember J. King's site right). Or use
the xlsearch for icdrt8 gees. I can send it to you.

X-MimeOLE: Produced By Microsoft MimeOLE V5.00.2014.211

I forgot to mention how to set the time and date.
I think TIME and DATE are internal commands of SpartaDOS,
but from BASIC, you would open a channel for write (after installing
the Z: handler). Then XIO 36,#1,0,0,"Z:":PUT #1,HOUR:PUT #1,MINUTE:
PUT #1,SECOND (obviously you have to have hour, minute and second
with the values you want in them.) It uses a military 24 hour scheme, so
0 is midnite 15 is 3PM.
To set the date from BASIC, open Z: for write, the XIO 37,#1,0,0,"Z:":
PUT #1,DAY:PUT #1,MONTH:PUT #1,YEAR. I'm not sure
about how the year works, oh, here it is, year is 84 for 1984.
2000? 2001? I guess you can PUT #1,YEAR where YEAR has
value 0 or 1.

Hi folks,
which Atari8bit Emulators supports .CAS file types
which are made from Atari data tapes (Atari 410).
I like to convert from tape to PC and wanna make sure that
8bit emulators support this filetype.
Atari800Win or Xformer2000 support it??

Bandie

Message-ID: <3a4fbeef$1_1@news.starnetinc.com>
Source record: 39820

I'm looking for 2 Basic programs, although there are many different ones named lander.bas & ghost.bas I haven't found them yet on all the sites I've seen....

Lander.bas:
-The game I'm looking for ends with 2 astronauts planting a flag on the moon... It also gets harder in which one on the screens is basically a spiral....

Ghost.bas
-This game I think game from a magazine (Antic or Analog) It is a multi-player game where you shoot in a maze & try to shoot the other player while hiding behind gray areas.

Thanks & Happy Atarian New Year!!!!

Just a follow-up, I've OCR'd the manual for Diskey Disk edit in it's
entirity and am halfway through crush,crumble,chomp. In the next couple
of days I'll get them uploaded and keep working on an archive of my
complete library. As soon as I get my APE cable working I'll add some
atr's. I've got a few disks that I haven't seen in any other online
archive. I'll be sure to post when I have a URL for this stuff.

I've had the same problem with a few old Ultima3 bootlegs I got in a
large disk lot. Is it possible that this is just for an 800xl and I'm
running out of memory 'cause It feels like a system lockup. Maybe it's
a copy protection on the disk itself, I've heard they used to make some
that would lockup when sensing a bootleg.
